Pediatric Emergencies comprehensively covers the practical management of pediatric emergencies based on organ systems, with a strong emphasis on clinical relevance. Each chapter explores the background, classic clinical presentation, atypical clinical presentation, differential diagnosis, diagnostic confirmation, treatment, clinical algorithm, disposition, complications, and pitfalls of each topic. More clinically focused than a traditional textbook, and more comprehensive than a typical clinical guide, Pediatric Emergencies is an ideal resource for emergency providers of various backgrounds and training.

Children represent a special challenge for emergency care providers, because they have unique medical needs in comparison to adults. For decades, policy makers and providers have recognized the special needs of children, but the system has been slow to develop an adequate response to their needs. This is in part due to inadequacies within the broader emergency care system. Emergency Care for Children examines the challenges associated with the provision of emergency services to children and families and evaluates progress since the publication of the Institute of Medicine report Emergency Medical Services for Children (1993), the first comprehensive look at pediatric emergency care in the United States. This new book offers an analysis of:

- The role of pediatric emergency services as an integrated component of the overall health system.***
- System-wide pediatric emergency care planning, preparedness, coordination, and funding.***
- Pediatric training in professional education.***
- Research in pediatric emergency care.***

Emergency Care for Children is one of three books in the Future of Emergency Care series. This book will be of particular interest to emergency health care providers, professional organizations, and policy makers looking to address the pediatric deficiencies within their emergency care systems. Injuries cause more than half of all childhood deaths and a large proportion of pediatric trauma care is provided by non-pediatric specialists. This book provides an update of current practice, backed by evidence-based recommendations, in four sections: 1) Trauma systems for children, including epidemiology, organization of pediatric trauma care, disaster planning and systems for mass pediatric casualties and community injury prevention programs. 2) General principles of resuscitation and supportive care. 3) Specific injuries commonly seen in children, including from child abuse. 4) Rehabilitation, communication, long-term outcomes and performance improvement methods to monitor outcomes.

A Collection of Essays from Around the World

How can we meet the special needs of children for emergency medical services (EMS) when today's EMS systems are often unprepared for the challenge? This comprehensive overview of EMS for children (EMS-C) provides an answer by presenting a vision for tomorrow's EMS-C system and practical recommendations for attaining it. Drawing on many studies and examples, the volume explores why emergency care for children--from infants through adolescents--must differ from that for adults and describes what seriously ill or injured children generally experience in today's EMS systems. The book points the way to integrating EMS-C into current emergency programs and into broader aspects of health care for children. It gives recommendations for ensuring access to emergency care through the 9-1-1 system; training health professionals, from paramedics to physicians; educating the public; providing proper equipment, protocols, and referral systems; improving communications among EMS-C providers; enhancing data resources and expanding research efforts; and stimulating and supporting leadership in EMS-C at the federal and state levels. For those already deeply involved in EMS efforts, this volume is a convenient, up-to-date, and comprehensive source of information and ideas. More importantly, for anyone interested in improving the emergency services available to children--emergency care professionals from emergency medical technicians to nurses to physicians, hospital and EMS administrators, public officials, health educators, children's advocacy groups, concerned parents and other responsible adults--this timely volume provides a realistic plan for action to link EMS-C system components into a workable structure that will better serve all of the nation's children.

From reviews of the previous volume: "This volume should be quite useful to the target audience. It provides a good foundation for evidence-based practice and further research (4 stars)." --Doody's Book Review Service

The nursing community is continually challenged with expanding the empirical knowledge base that informs rural nursing practice. This volume of the prestigious Annual Review of Nursing Research, Focus on Rural Health, addresses this challenge. Contributors have developed creative and effective strategies to identify relevant research and present them in the context of the rural delivery system. Topics include: Nursing Research to Meet Health Care Needs of Rural Populations Improving Systems, Quality of Care & Patient Safety

Improving Cultural Relevance of Rural Nursing Research: Methodological Issues, Constraints, and Opportunities Also included: Contents of Previous 10 Volumes The contributors, all noted nurse scientists, discuss the key problems they deal with on a daily basis, utilizing recent rural and general health policy reports. This approach allows readers to learn new techniques and strategies for rural nursing practice that are firmly grounded in the evidence. While the primary examples are drawn from American contexts, a special chapter on global perspectives highlights analogous problems and issues that rural nursing research raises across countries, particularly the availability of resources. About the Editors This volume is edited by Elizabeth Merwin, Associate Dean, Research and the Director of the Rural Health Care Research Center at the University of Virginia School of Nursing. The series editor is Joyce J. Fitzpatrick, who has received numerous honors and awards including the American Journal of Nursing Book of the Year Award 18 times, and is the Elizabeth Brooks Ford Professor of Nursing, Frances Payne Bolton School of Nursing at Case Western Reserve University.
