This volume covers the modern developments in boiling heat transfer and two-phase flow, and is intended to provide industrial, government and academic researchers with state-of-the-art research findings in the area of multiphase flow and heat transfer technology. Special attention is given to technology transfer, indicating how recent significant results may be used for practical applications. The chapters give detailed technical material that will be useful to engineers and scientists who work in the field of multiphase flow and heat transfer. The authors of all chapters are members of the CMR at Rensselaer, a research centre specializing in the state-of-the-

Despite the importance of the problem, strikingly little has been written about effective approaches to the treatment of individuals with mild to moderate brain injury. This book is designed for neuropsychologists, counseling and rehabilitation psychologists, and other rehabilitation professionals who work with individuals who have sustained brain injuries of mild to moderate severity. It provides a context for understanding and evaluating the common consequences of such injuries and offers both theoretical perspectives and practical suggestions for helping individuals to adjust to and compensate for residual difficulties. Early chapters focus on different domains of cognitive functioning, while later chapters describe clinical approaches to helping clients manage

common emotional reactions such as depression, irritability, and anxiety. While the book acknowledges and discusses the controversy about the origins of persistent symptoms following mild brain injuries, it does not focus on the controversy. Rather, it adopts a "what works" approach to dealing with individuals who have persistent symptoms and perceptions that contribute to disability and to emotional distress. Many of these individuals benefit significantly from neuropsychological intervention. Case examples throughout the book illustrate the adaptation of cognitive, cognitive-behavioral, and traditional psychotherapeutic approaches to individuals with mild to moderate brain injury. Self-regulation and self-management of both cognitive failures and emotional responses are

This compendium of four mini-projects carried out by a special task force of the National Association of College and University Business Officers (NACUBO) addresses policy and management issues related to providing accessibility to handicapped students in higher education. Topics range from executive policy decisions on compliance with federal accessibility mandates to operational procedures for

responding to specific accommodation requests. The compendium is comprised of four sections: Section 1 was developed from a series of site-visit interviews with senior-level decision makers, faculty, staff and handicapped students at six colleges and universities. It contains an overview of accessibility issues and problems that require attention, a discussion of how accessibility considerations can be incorporated into a planning and budgeting process, and a set of guidelines for assessing specific accommodation requests; Section 2 reviews 16 national data bases that describe the handicapped population in the United States and contains summary charts of the characteristics revealed. Section 3

describes the results of a survey that NACUBO mailed to a stratified sample of 944 of its member institutions concerning trends in accessibility expenditures and number and types of handicapped students served; and Section 4 lists adaptive education equipment by impairment (such as hearing or mobility) and then by function (such as writing or speaking). The document contains an index, equipment source list, and lists of information resources and services available to handicapped students. (GLR)

The Internship, Practicum, and Field Placement Handbook, Seventh Edition is a practical guide to the “real world” knowledge and skills that students need when they begin working in the field of mental health. This text guides interns through every phase of the internship process from finding placements to concluding relationships with clients and supervisors. Along the way students learn about ethics, clinical writing and record keeping, working with

peers and supervisors, understanding diversity, and self care and safety. Following an evidence and competency based approach, the latest research findings are reviewed from the fields of psychology, social work and counseling. Closed circuit television (CCTV) is experiencing a leap in technology using digital techniques, networking and the Internet. The new edition of this high-level professional reference retains the particulars that made the first edition a success, including the details of CCD cameras, lenses, coaxial cables, fiber-

optics, and system design, but it is expanded to cover all video compression techniques used in the ever increasing assortment of digital video recorders (DVRs) available on the market today. This new edition of the book CCTV demystifies DVR technology. It also serves to clarify the technology of data networking. The theoretical section explains the various compression techniques. Networking is also a new and unknown area for many CCTV installers and this is explained in a brand new section. New edition more accessible

Mapping the Total Value Stream defines and elaborates on the concepts of value stream mapping (VSM) for both production and transactional processes. This book reshapes and extends the lessons originally put forward in a number of pioneering works including the popular ,Value Stream Management for the Lean Office. It reinforces fundamental concepts and theoretical models with real-world applications and complete examples of the value stream mapping technique. To educate VSM mappers on the specific

mechanics of the technique, the text provides in-depth explanations for commonly encountered situations. The authors also provide a more complete perspective on the concept of availability. While they discuss availability of equipment in transactional processes, they extend the concept by elaborating on availability as it applies to employees. The calculation of process lead time for work queues is taken to an advanced level – not only is the calculation of this lead time explained, but the text also covers the very real possibility of having more work in the queue than available time. While previous books have focused on only production process VSM or transactional process VSM, this work meets the real needs of both manufacturers and service sector organizations by dealing with both types. It goes beyond explaining each scenario, to teach readers what techniques are

commonly applicable to both, and also explains areas of difference so that mappers will be able to readily adapt to whatever unique situations present themselves.

This book is concerned with the interdisciplinary studies applying computer technologies to the theory and practice of art therapy. The contents consist of the author's sixteen papers published, twelve patents in Korea, Japan, and the U.S.A., and other relevant materials, all organized in a logical sequence. This book is intended for art therapy courses at upper undergraduate and graduate levels. No prior computer knowledge is assumed.

Interpretation of drawings no longer needs to be done manually by the therapists themselves because, as this book argues, computerized systems can perform the steps of evaluation and interpretation. The difficult concept of computer science is explained in a simple and concrete way with illustrations, sample drawings, and case studies. This book explains statistical methods, various functions of a computer, technologies in digital image processing, computer algorithms, methodologies in expert systems, and the Bayesian

network. All these elements can be used to improve the practice and theory in the evaluation of art and the interpretation of art. Readers do not need to worry about unfamiliar terms such as digital image, algorithm, expert system, and Bayesian network which appear here. Neither should they be concerned about pixel, cluster, edge, blurring, convex hull, regression, etc., the terms which appear later in the book. These terms will be explained with illustrations and drawings for easy understanding. Computational Art Therapy will not only

promote the use of various art therapy tools but also provide a foundation for new methodologies through which art therapy researchers can develop their own methodologies to improve the practice and theory of art therapy. It will be of special interest to those studying art therapy, psychology, psychiatry, art, computer science and applied statistics.
