

Perkins 6354 Engine

This illustrated work covers the stories of five British engineering companies that produced successful ranges of agricultural, earthmoving or construction machinery. County, Doe, Chaseside, Muir-Hill, Matbro and Bray all made extensive use of the Ford tractor skid unit as a basis for their machines and they pioneered the development of the four-wheel drive agricultural tractor in Britain. Stuart Gibbard gives details of all the main models and machines of these manufacturers. He chronicles the fortunes of the firms from the beginning of the 20th century to the present day and discusses many of the personalities involved. the 36th edition of this bestseller for busy fleet operators is the definitive guide for anyone in the road transport industry. it presents all the legal requirements in a coherent format, as well as offering operational advice and solutions to some of the problems facing the industry. new to this edition is the examination of the new road transport directive which inhibits the working hours for lgv drivers and the launch of the new driver smart card. further legal updates include the eu driver training directive and the new road safety bill which will introduce tougher penalties and new powers to seize and dispose of uninsured vehicles.

Mac Burns is a retired police detective from Atlanta who makes a new home in the sleepy lowcountry town of Bluffon, South Carolina. Mac is devoted to his divorced status, and not particularly interested in a new relationship, however... Shelby, many years Mac's junior may be interested. Is Mac? Enter Percy, his next door neighbor and a disbarred attorney, who proves to be, at very least, a reliable drinking buddy. When an old acquaintance from his days in Atlanta shows up, his hopes of a "ho hum" existence are quickly dashed. Mac discovers that the instincts he cultivated as a big city cop haven't faded as he reluctantly but purposefully dives into the task of solving a mystery that will take him from Charleston to New Orleans and even back to Atlanta. Nothing could prepare him for the ultimate outcome. Lowcountry Boil is an engaging and entertaining page turner, particularly for fans of crime fiction.

Every year on the first Sunday in August, hundreds gather to see one of the greatest displays of historic commercial vehicles. First organised in 1969, the Trans Pennine Run attracts an annual entry of around 200 vehicles coming from all over the UK. The event starts at Birch Services on the M62 at Manchester at about 7.30 in the morning and runs for 64 miles via Rochdale, Halifax and Bradford, taking in some of the finest Yorkshire scenery along the way. From 11.30 the vehicles start arriving at the famous Harrogate Stray where they are then displayed to the public. Avid photographer, Roy Dodsworth has been following the event since the late 1990s and has a collection of over 3000 images taken there. This book collects together 262 of Roy's favourite truck photos, including a bit of history about each of the vehicles - many of which have been restored to their original livery. The Trucks of the Trans Pennine Run is a must-have for any driver who has ever participated in the run. Current and former truckers and anyone else with an interest in transport history will all enjoy being reminded of these beautiful old vehicles.

Dennis Buses and Other Vehicles

A Mac Burns Novel

International Symposium on Alcohol Fuels

The Dennis company has been building vehicles since 1895, making it the oldest continuously producing British manufacturer. From its origins in a small Guildford shop, the company has grown to become a major bus manufacturer with its products selling around the world. This book discusses the company's highs and lows, through two world wars, challenging markets and ownership changes. It documents the vehicles produced and their innovative design features, from early cars and street-cleaning machines to vans, buses, trucks, fire engines and ambulances. First-hand descriptions of how, and why, some of the company's most successful products such as the Dart, Trident and Enviro buses evolved. It explains why their once market-leading fire engines are no longer made. It also analyses the reasons why some products were less successful and explores what happened to parts of the company that were sold over the years. Finally, the company's future opportunities and challenges are considered. The author, Andy Goundry, has not only drawn on his own personal experience of almost twenty years of employment with the company but he has drawn on what is left of the company archives, private collections and first-hand accounts, to produce this book as a salutation of over 125 years of continuous manufacturing.

Marine Diesel Basics 1

Accidental Sailor Girl is a story about a young girl named Kourtney and her journey from starting out with only her car and a surfboard to sailing across the Atlantic on a Gaff Rigged Cutter with a Square Sail named Norna. The story moves from her hardships of living on the beach to buying her first sailboat, a 27 foot Hunter she named "Happy." Her attitude toward learning how to sail and how to fix up her boat led her to meet Pete Grundvig, a local carpenter and shipwright, the owner of Norna. Their relationship with surfing, sailing, and music, moved them to the tune of a two year Atlantic Circumnavigation. Kourtney soon realizes she is not the same person she was when she left home two years before.

Despite being the inventor of the tank and responsible for campaign-winning tactics, by the start of the Second World War the United Kingdom had fallen well behind other nations in the design and build of armoured vehicles. Here, William Suttie uncovers the history of tank design from a government perspective and the decisions and failures that led to that state of affairs, and details the formation of the Fighting Vehicles Research and Development Establishment at Chertsey. Known as the Tank Factory, the Chertsey establishment sought to ensure that the United Kingdom became world-leading in the field of military vehicle research and design, and that the British Army would never be underprotected or outgunned again. Drawing on unpublished sources and photographs, this fascinating book reveals the establishment's history, its groundbreaking research and its inventions and designs, including first-hand insights from those who worked there.

This book contains the combined papers from a NATO sponsored meeting entitled "Mobile Source Emissions Including Polycyclic Organic Species". This meeting was held in Liege, Belgium, from August 30 to September 2, 1982, as an Advanced Research Workshop (ARW). Specialists from 13 countries met to discuss the impacts of fuel type and engine operation on emissions from gasoline and diesel-powered vehicles. The meeting was organized into five sessions: basic studies, biological activity, analytical methods, data bases, engineering and international research programs. The five sessions were each followed by intensive discussions on the important conclusions to be drawn from the data presented. From these session discussions, subcommittee efforts and a final group discussion on all the research results presented, a meeting summary was prepared by the editors that presents the major findings of the conference and gives detailed recommendations for future research. This summary is included at the end of the book. The summary includes highlights of data presented, areas of research needs, recommendations for

standardization of test parameters and species analyzed, suggested new methodology for characterizing mobile emissions, trends in fuel use including diesel, gasoline, anti-knock additives and blending agents, operation of catalysts, control strategies, implications from both in vivo and in vitro health effects studies, and a presentation of the scope and direction of several large international programs that are major studies of mobile source performance.
