American Book Publishing Record Cumulative 1950-1977

**An international team of researchers studied the following aspects of training in Italy's motor vehicle repair and sales sector: structure and characteristics; institutional and social context; relationship to Italy's overall labor market; changing structural, economic, and organizational conditions; and training and recruitment and relationship to Italy's education system. Social and labor/employment statistics were analyzed, and case studies of an independent auto repair shop and four automobile distributors were conducted. Included in each case study were a profile of the company and analysis of its human resource development/training concepts and policies, and provisions for continuing vocational training. A distinct lack of initial vocational training required to produce workers capable of keeping pace with the rapid changes in the sector was noted. This deficiency was partly compensated for by courses provided by manufacturers and, to a lesser degree, related associations. The training currently offered by the companies studied was rated average to better than average. Employee training was being provided almost exclusively by manufacturers. A trend away from training only in traditional technical areas toward training in areas deemed useful for overall company management (including planning, marketing, and telemarketing) was noted. (Sixty tables/figures are included.) (MN)**

Advanced Automotive Fault Diagnosis

World List of Books in English

Autocar & Motor

Diagnostics, or fault finding, is a fundamental part of an automotive technician's work, and as automotive systems become increasingly complex there is a greater need for good diagnostic skills. Advanced Automotive Fault Diagnosis is the only book to treat automotive diagnostics as a science rather than a check-list procedure. Each chapter includes basic principles and examples of a vehicle system followed by the appropriate diagnostic techniques, complete with useful diagrams, flow charts, case studies and self-assessment questions. The book will help new students develop diagnostic skills and help experienced technicians improve even further. This new edition is fully updated to the latest technological developments. Two new chapters have been added – On-board diagnostics and Oscilloscope diagnostics – and the coverage has been matched to the latest curricula of motor vehicle qualifications, including: IMI and C&G Technical Certificates and NVQs; Level 4 diagnostic units; BTEC National and Higher National qualifications from Edexcel; International Motor Vehicle qualifications such as C&G 3905; and ASE certification in the USA.
