background information on large-scale examination
systems more generally and the South African
examination specifically. It traces the reforms in the
education system of South Africa since 1994 and
provides a description of the advances in modern test
theory that could be considered for future standard
setting endeavours. At the heart of the book is the
debate on whether the current standard of education
in Africa is good enough . If not, then how can it be
improved? The aim of this book is to provide a point of
departure for discussions on standard-setting, quality
assurance, equating of examinations and assessment

This collection of new essays explores the nature of explanation and causality. It provides a stimulating and wide ranging debate on one of the central issues that has concerned philosophers and scientists alike--the epistemological nature of their enquiries. The volume not only sheds light on some of the general questions involved, but also addresses specific problems involved in explanation in different fields--physics, biology, psychology and the social sciences. Explanation and its Limits is an up-to-date, sharply focused and comprehensive review for all philosophers, scientists and social scientists interested in methodology.

Military conflicts, particularly land combat, possess the characteristics of complex adaptive systems: combat forces are composed of a large number of nonlinearly interacting parts and are organized in a dynamic command-and-control network; local action, which often appears disordered, self-organizes into long-range order; military conflicts, by their nature, proceed far from equilibrium; military forces adapt to a changing combat environment; and there is no master voice that dictates the actions of every soldier (i.e., battlefield action is decentralized). Nonetheless, most modern state of the art military simulations ignore the self-organizing properties of combat. This book summarizes the results of a multiyear research effort aimed at exploring the applicability of complex adaptive systems theory to the study of warfare, and introduces a sophisticated multiagent-based simulation of combat called EINSTEIN. EINSTEIN, whose

bottom-up, generative approach to modeling combat stands in stark contrast to the top-down or reductionist philosophy that still underlies most conventional military models, is designed to illustrate how many aspects of land combat may be understood as self-organized, emergent phenomena. Used worldwide by the military operations research community, EINSTEIN has pioneered the simulation of combat on a small to medium scale by using autonomous agents to model individual behaviors and personalities rather than hardware.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy
