

Plantain Farming Business

With the current world population growth of 1.2%, the earth can expect to house 9-10 billion people by 2050. Food production, too, must increase to accommodate these numbers. Easy growing, high calorie, nutritious foods, such as bananas are the top priority as a solution to this imminent problem. The first comprehensive compendium on bananas in rec

Reduction of poverty is a tremendous and persistent challenge for the global community. Given that the livelihood of millions is at stake, there is an urgent need to reconsider the causes of poverty and the remedies for poverty. Poverty and its reduction are closely linked to the natural-resources base. The quality and bounty of the local environment certainly affect living conditions of the poor and their poverty is often seen as a contributing factor to the degraded condition of the local environment. Teasing apart the direction of causality in this resource-poverty nexus is a serious empirical challenge. This book contributes to an improved understanding of the economic dimensions of environmental and natural-resource management and poverty alleviation. The ten chapters of the book offer an overview of the current knowledge concerning the relation between poverty, environment and natural-resource use. Three sides of the debate receive particular attention. First, the relation between resource use and poverty is discussed from a theoretical point of view. Second, it is questioned whether payments for environmental services or considering values of resources can be an effective tool for stimulating both sustainable resource use and poverty alleviation. Third, alternative strategies to break the land degradation-poverty cycle are discussed.

Farming, the Business Magazine

In a field of mature bananas, plants can be seen at all stages of vegetative growth and fruit maturity, providing a fascination for anyone who has an interest in growing crops. Banana farmers in the tropics can harvest fruit every day of the year. The absence of seasonality in production is an advantage, in that it provides a continuity of carbohydrate to meet dietary needs as well as a regular source of income, a feature that perhaps has been under-estimated by rural planners and agricultural strategists. The burgeoning interest in bananas in the last 20 years results from the belated realization that *Musa* is an under-exploited genus, notwithstanding the fact that one genetically narrow group, the Cavendish cultivars, supply a major export commodity second only to citrus in terms of the world fruit trade. International research interest in the diversity of fruit types has been slow to develop, presumably because bananas and plantains have hitherto

Access Free Plantain Farming Business

been regarded as a reliable backyard source of dessert fruit or starch supplying the needs of the household, and in this situation relatively untroubled by pests, diseases or agronomic problems.

Rice is the staple food of over half the world population. Rice is normally grown as an annual plant, although in tropical areas it can survive as a perennial crop and can produce a ratoon crop for up to 30 years. The rice plant can grow to 1 to 1.8 m tall, occasionally more depending on the variety and soil fertility. Since its origin, the spread of rice cultivation is extensive and rice is now being grown wherever water supply is adequate and ambient temperature are suitable. The rice grain is covered with a woody husk or hull, which is indigestible and is to be removed in the first step during processing for making the rice edible. Rice cultivation is well suited to countries and regions with low labor costs and high rainfall, as it is labor intensive to cultivate and requires ample water. Rice can be grown practically anywhere, even on a steep hill or mountain. The traditional method for cultivating rice is flooding the fields while, or after, setting the young seedlings. This simple method requires sound planning and servicing of the water damming and channeling, but reduces the growth of less robust weed and pest plants that have no submerged growth state, and deters vermin. While flooding is not mandatory for the cultivation of rice, all other methods of irrigation

Access Free Plantain Farming Business

require higher effort in weed and pest control during growth periods and a different approach for fertilizing the soil. Drying is an essential step in the processing and preservation of paddy; it is the process that reduces grain moisture content to a safe level for storage. Milling is a crucial step in post production of rice. The basic objective of a rice milling system is to remove the husk and the bran layers, and produce an edible, white rice kernel that is sufficiently milled and free of impurities. India is the second largest rice producing country of the world after China. India also grows some of the finest quality aromatic rice of which basmati is the most high quality rice. This book basically deals with history, origin and antiquity of rice, seed rice and seed production, harvest and post harvest operations, water management practices for rice, diseases and pests of rice and their control, application of biotechnology in aromatic rice improvement, traditional methods of parboiling, modernization of parboiling process, solvent extractive rice milling, general types of quick cooking rice processes, dry milled rice products in brewing, breakfast cereals, rice flakes, puffed rice, rice in multi grain cereals etc. The present book contains cultivation and processing of rice in various ways. The book is very resourceful for the entrepreneurs, technocrats, research scholars etc.

This book provides a thorough perspective on the realities of doing business in

What do you feel about your life? Are you confused with no sense of direction? Does your life feel scattered? Do you find it difficulty organizing yourself, your family's schedule and work's schedule? Do you ever have a goal you intend to pursue? What kind of life do you intend to live, simpler

life or otherwise? Resolve today to discover your purpose in life. A lot of people pass through this world undiscovered. There many unfulfilled purpose buried in the grave yard. Have you ever ask yourself this question, why am I in this world? What is my mission on earth? Am I on this earth to sleep, wake up, eat, drink, enjoy life, bear children, definitely not. You need to discover your purpose in life. This book will enlighten you and open your eyes to discover your purpose in life

Knowledge of Africa's complex farming systems, set in their socio-economic and environmental context, is an essential ingredient to developing effective strategies for improving food and nutrition security. This book systematically and comprehensively describes the characteristics, trends, drivers of change and strategic priorities for each of Africa's fifteen farming systems and their main subsystems. It shows how a farming systems perspective can be used to identify pathways to household food security and poverty reduction, and how strategic interventions may need to differ from one farming system to another. In the analysis, emphasis is placed on understanding farming systems drivers of change, trends and strategic priorities for science and policy. Illustrated with full-colour maps and photographs throughout, the volume provides a

comprehensive and insightful analysis of Africa's farming systems and pathways for the future to improve food and nutrition security. The book is an essential follow-up to the seminal work Farming Systems and Poverty by Dixon and colleagues for the Food and Agriculture Organization (FAO) of the United Nations and the World Bank, published in 2001.

It has been stated that information is the currency of the 21st century, and billions of words are added every minute to the mountains of words in the library of human existence. This mountain at most can be very intimidating and mind boggling, and navigating through the burrows and rows of words in this library, searching for new information or knowledge, can be very daunting. No wonder, through the help of technology, the world is gradually moving from "Do it for us", to Do it yourself". But doing it yourself, requires skills, time, patience and resilience. Since, it has no doubt, increasingly become difficult for people to do research online, access relevant information, or develop new skills, probably due to the constraint of time. It is our quest to help you overcome all these constraints, which gave birth to the book "DO IT YOURSELF". Do it yourself, is the most comprehensive guide of How to's, in any subject matter that is of interest to you. We gracefully understand what it takes to

browse through thousands or even millions of pages online, looking for information on the new skill you want to acquire, or the new information you want to access, we have therefore save you time and money by compiling all the information in a book form, to save you millions of hours of research, data, and loss of quality time with loved ones. Do it yourself is therefore aimed at helping you achieve more and become better with less efforts, which will directly or indirectly change your way of thinking for the betterment of your life and that of others.

DO IT YOURSELF

This research evaluates what the National Youths Service Corps members community perceives as their support needs in Nigeria in tackling poverty. It also analyses the process of leveraging policymaking, using social marketing techniques. It seeks a deeper understanding of the poverty elimination processes in Nigerian and beyond. A mixed-methods research design was adopted engaging a quantitative approach in

Access Free Plantain Farming Business

which 351 NYSC members were surveyed using self-completion questionnaires. In addition, qualitative studies in which policy-makers as well as young people within the NYSC members community were interviewed. The main findings of the research reveal that young people: NYSC members support-needs in Nigeria are inadequate. A great deal more needed to be done. A Marshall-plan scale of support is required. The most significant causes of poverty amongst the NYSC members are absence of jobs, corruption of government officials, low wages, tribalism, oil pollution, natural disasters, IMF/World Bank conditionalities and wars. The main experiences of poverty include a high youth unemployment rate, No money to-go-to-school, No money to start small businesses, less food to eat, no money to treat sickness, no money to buy-clothes, no money to afford decent homes, prostitution, absence of a public transportation system as well as into-drugs and into-kidnapping.

Unveiling Women's Leadership provides a penetrating insight into the world of Indian woman leaders. The book unravels the unique challenges facing the Indian woman leader who has to juggle several challenges including patriarchy, the caste system, harassment, and society's expectation that she ought to fit snugly into stereotypical roles.

Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for humans and their children. Sustainable agriculture is a discipline that addresses current issues such as climate change, increasing food and fuel prices, poor-nation starvation, rich-nation obesity, water pollution, soil erosion, fertility loss, pest control, and biodiversity depletion. Novel, environmentally-friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy, soil science, molecular biology, chemistry, toxicology, ecology, economy, and social sciences. Indeed, sustainable agriculture decipher mechanisms of processes that occur from the molecular level to the farming system to the global level at time scales ranging from seconds to centuries. For that, scientists use

Access Free Plantain Farming Business

the system approach that involves studying components and interactions of a whole system to address scientific, economic and social issues. In that respect, sustainable agriculture is not a classical, narrow science. Instead of solving problems using the classical painkiller approach that treats only negative impacts, sustainable agriculture treats problem sources. Because most actual society issues are now intertwined, global, and fast-developing, sustainable agriculture will bring solutions to build a safer world. This book series gathers review articles that analyze current agricultural issues and knowledge, then propose alternative solutions. It will therefore help all scientists, decision-makers, professors, farmers and politicians who wish to build a safe agriculture, energy and food system for future generations.

Subsistence to Commercial Farming in Present-Day Buganda

This publication showcases initiatives that have been successfully implemented to help youth build resilience in the agrifood system, despite the severe consequences of climate change and formidable social and economic challenges. It aims to inspire potential policies and programmes by portraying key needs, challenges and initiatives, as well as lessons learned and opportunities for helping to improve the resilience of

Access Free Plantain Farming Business

livelihoods for youth in small-scale food production. The aim is to draw recommendations from these initiatives, building on the Koronivia Joint work on Agriculture (KJWA) - a landmark decision under the United Nations Framework Convention on Climate Change (UNFCCC) that recognizes the unique potential of agriculture in tackling climate change.

A joint FAO and World Bank study which shows how the farming systems approach can be used to identify priorities for the reduction of hunger and poverty in the main farming systems of the six major developing regions of the world.

This study investigates what young people and community organisations see as their support needs in Bayelsa State of Nigeria in tackling poverty. It also examines the process of influencing policy makers, using social marketing techniques. It seeks to expand understanding of the poverty elimination processes: not only within a developing countrys rural environmental context, but also endeavours to generalize the findings more broadly. It seeks an inclusive approach to policy determination driven by involving grassroots levels. A mixed-methods research design was adopted engaging a quantitative

Access Free Plantain Farming Business

approach in which 300 young people were surveyed using self-completion questionnaires. In addition, a qualitative study in which policy-makers as well as young people and community organisations were interviewed. A discussion group methodology was adopted. Following the data-analysis, a strategy conference was organized in Nigeria, in which the major findings were presented and debated. This research has improved on the previous Multi-dimensional Poverty Index by enlarging it and combining it with a current Social Marketing Technique model. The new Multi-dimensional Poverty Index - Implementable Joint Programme of Action model is user friendly and retains the multidimensional paradigm. This extension was achieved through the literature research, the development of methodology, adopting mixed-methods approach and the strategy conference. The main findings of the research show that young people and community organisations support-needs in Bayelsa State of Nigeria are far from being met. A great deal of additional support is required. The most significant causes of poverty amongst young people and community organisations are corruption of government officials, absence of jobs, low wages, oil

Access Free Plantain Farming Business

pollution and IMF/World Bank conditionalities. It was also found that the main experiences of poverty include a high youth unemployment rate, lack of money to go to school, lack of money to start small businesses, less food to eat, no money to treat sickness, no money to buy clothes, no money to afford decent homes, prostitution, and absence of a public transportation system. The research considers the ways in which this additional support might be provided. Importantly, the research also revealed how extreme poverty could be alleviated, and by persuading policy-makers to create real jobs and job opportunities as well as developing employability skills and improving agriculture. In addition, there is a need to attract investors/oil companies to Bayelsa State and to increase investment spending. The lack of social infrastructure and access to free education, steady electricity and free healthcare are also seen as problems. Finally, the research revealed that actively involving young people and community organisations in policy-decision making and policy-implementation processes, including setting new priorities, or re-directing, is likely to enhance the probability of ending extreme poverty.

Plantain Cultivation Under West Africa Conditions

Djogbachiachuwa is an attempt by the Liberian Literature Project 2012 set forth by the Liberian History, Education & Development, Inc. (LIHEDE) to close this literary gap. It is also an attempt to have the rest of the world to read more of Liberian literature through the eyes of Liberians other than themselves. It is believed that people who do not know their own history, culture or language have nothing of worth and beauty to pass on to successive generations, and is thus doomed and condemned to perpetual warfare and poverty. The Liberian Literature Anthology Project 2012 is an endeavor to depart from this self-defeating historical trend to produce an Anthology of Liberian literature that draws on the tradition of each ethnic subgroup in Liberia.

An increasing number of African smallholders are moving from subsistence

Access Free Plantain Farming Business

farming to selling at least part of their output. To shift successfully to a more commercial footing they need a lot more than the production advice traditionally provided by extension services. They need to understand how markets work. They also need advice on postharvest handling, help with business planning and marketing, assistance with organization, information on prices, links to buyers and credit, help with contracts and standards, and many other types of assistance. These agricultural business development services are provided by a mix of private companies, NGOs, cooperatives and government agencies - in what is called a "pluralistic extension system". Farmers - and other clients such as input stores, small-scale processors and traders - get some services for free, paid for by donors or the government. Others are subsidized: the farmers pay part of the cost. For still others, the farmers must pay the full cost. That leads to questions of sustainability (what happens when the donor's money runs out?), accountability (whom do the service providers listen to: the farmers, or the source of the funds?), and inclusiveness (how to ensure that women, the poor and disadvantaged get the services they need but cannot afford?). This book describes the two dominant approaches to providing services: supply-driven (where the funder decides what services should be offered), and market-driven (where more emphasis is

Access Free Plantain Farming Business

put on market forces). It looks at how 12 business service providers from across Africa run their businesses. It describes the seven different "business models" that they pursue, and examines the features of each one. Based on their experiences, it proposes a new, needs-driven approach, which aims to overcome the shortcomings of both the supply-driven and the market-driven approaches by taking the needs of clients as a starting point for policy and action.

Bananas and plantains are major fruit crops in the tropics and subtropics, making a vital contribution to the economies of many countries. In the last 15 years, substantial changes have occurred in banana production, among them the increased importance of fungal and viral diseases and their serious impact on Cavendish export cultivars, smallholder plantains and cooking bananas. Changes in production systems such as protected greenhouse cultivation, organic, fair-trade and integrated cultivation and their respective certification schemes have also become prominent. This book provides an accessi.

Farming Systems and Poverty

Tackling Poverty

A Case Study of Cameroon

Focus on Rivers State

Improving Farmers' Livelihoods in a Changing World Economics of Poverty, Environment and Natural-Resource Use

Bananas, the most frequently consumed fresh fruit in the United States, have been linked to Miss Chiquita and Carmen Miranda, "banana republics," and Banana Republic clothing stores—everything from exotic kitsch, to Third World dictatorships, to middle-class fashion. But how did the rise in banana consumption in the United States affect the banana-growing regions of Central America? In this lively, interdisciplinary study, John Soluri integrates agroecology, anthropology, political economy, and history to trace the symbiotic growth of the export banana industry in Honduras and the consumer mass market in the United States. Beginning in the 1870s when bananas first appeared in the U.S. marketplace, Soluri examines the tensions between the small-scale growers, who dominated the trade in the early years, and the shippers. He then shows how rising demand led to changes in production that resulted in the formation of major agribusinesses, spawned international migrations, and transformed great swaths of the Honduran environment into monocultures susceptible to plant disease epidemics that in turn changed Central American livelihoods. Soluri also looks at labor practices and workers' lives, changing gender roles on the banana plantations, the effects of pesticides on the Honduran environment and people, and the mass marketing of bananas to consumers in the United States. His multifaceted account of a century of banana production and consumption adds an important chapter to the history of Honduras, as well as to the larger history of globalization and its effects on rural peoples, local economies, and biodiversity. In most African countries, banana production has been consigned to subsistence production. However, a few countries, especially in Francophone West Africa, have recognised the commercial importance of banana, and have used their special relationship with France to export bananas. This has led to the

Access Free Plantain Farming Business

dualization of the banana sector, with the traditional system existing side by side with a modern sector geared towards export trade. This book is one of the few comprehensive studies that have incorporated both the agronomic and economic aspects of banana production and marketing in Africa. It looks at all facets of banana production, from an historical perspective to the various traditional and modern technologies involved. The marketing aspect covers both the domestic and international trade, with emphasis on the preferential (ACP / DOM Lome Convention) and the open markets of the European Union. The book is a major contribution to understanding the internationalisation of the banana trade and to its ever-increasing investment portfolio, as the backbone of many a developing tropical economy. Although the emphasis is placed on Cameroon, other relevant African, tropical and subtropical banana-producing countries are mentioned where necessary, especially in the export sector where a degree of competition existed. Further, agricultural practices, soils, meteorological and climatological characteristics, pests and diseases, personnel and banana varieties grown, mean that findings in Cameroon are of relevance to other banana-producing countries, especially in Africa. Meanwhile, other African and tropical countries still contemplating entry into banana exports would benefit from the Cameroon experience. The book is of especial relevance to agronomists, entomologists, economists, farm managers, government policy makers, large, medium and small scale banana growers, and students and teachers in universities and schools of agriculture.

An adaptable and ecological food source, plantain production can benefit enormously from a number of new production techniques. This practical, well-illustrated guide provides a step-by-step description of the main stages of producing plantain from stem fragments (PIF). An ideal resource for farmers and extension workers, it includes a description of the recommended steps for growing plantain, along with information about sales, control of pests and diseases, plantain use and recipes.

With just 1.63m people, Gabon is the second-smallest member of the six-country Central African Economic and Monetary Community in terms of population, after Equatorial Guinea. However, the country's well-developed hydrocarbons sector has made Gabon the second-largest economy in the sub-region. The economy of Gabon has largely developed on the back of the country's substantial oil and gas resources; however, declining production levels are leading the government to pursue a strategy of economic diversification. While efforts to encourage new investment and offshore oil exploration may yet yield results, the development of other industries, including forestry and mining, is being encouraged. Meanwhile, like many

African countries, Gabon is working to ensure that a larger percentage of natural resource wealth is channelled into the national economy.
