Between 1887 and 1895, the British art student Miles Vndercroft travelled around the world, sketching and painting the soldiers of the countries through which he passed. In this age of dramatic technological advancement, Vndercroft was fascinated by how the rise of steam technology at the start of the American Civil War had transformed warfare and the role of the fighting man. This volume collects all of Vndercroft's surviving paintings, along with his associated commentary on the specific military units he encountered. It is a unique pictorial guide to the last great era of bright and colourful uniforms, as well as an important historical study of the variety of steam-powered weaponry and equipment that abounded in the days before the Great War of the Worlds.

An in-depth history of the Stalinist skyscraper In the early years of the Cold War, the skyline of Moscow was forever transformed by a citywide skyscraper building project. As the steel girders of the monumental towers went up, the centuries-old metropolis was reinvented to embody the greatness of Stalinist society. Moscow Monumental explores how the quintessential architectural works of the late Stalin era fundamentally reshaped daily life in the Soviet capital. Drawing on a wealth of original archival research, Katherine Zubovich examines the decisions and actions of Soviet elites—from top leaders to master architects—and describes the experiences of ordinary Muscovites who found their lives uprooted by the ambitious skyscraper project. She shows how the Stalin-era quest for monumentalism was rooted in the Soviet Union's engagement with Western trends in architecture and planning, and how the skyscrapers required the creation of a vast and complex infrastructure. As laborers flooded into the city, authorities evicted and rehoused tens of thousands of city residents living on the plots selected for development. When completed in the mid-1950s, these seven ornate neoclassical buildings served as elite apartment complexes, luxury hotels, and ministry and university headquarters. Moscow Monumental tells a story that is both local and broadly transnational, taking readers from the streets of interwar Moscow and New York to the marble-clad halls of the bombastic postwar structures that continue to define the Russian capital today.

In this second volume, Jens Müller rounds off the most comprehensive exploration of graphic design to date. With around 3,500 seminal pieces and 78 landmark projects, year-by-year spreads, and profiles of industry leaders, discover how graphic design shaped contemporary society from the 1960s until today, from the hippie movement to new forms...

The Palace of Culture and Science is a massive Stalinist skyscraper that was "gifted" to Warsaw by the Soviet Union in 1955. Framing the Palace's visual, symbolic, and functional prominence in the everyday life of the Polish capital as a sort of obsession, locals joke that their city suffers from a "Palace of Culture complex." Despite attempts to privatize it, the Palace remains municipally owned, and continues to play host to a variety of public institutions and services. The Parade Square, which surrounds the building, has resisted attempts to convert it into a money-making commercial center. Author Micha? Murawski traces the skyscraper's powerful impact on 21st century Warsaw; on its architectural and urban landscape; on its political, ideological, and cultural lives; and on the bodies and minds of its inhabitants. The Palace Complex explores the many factors that allow Warsaw's Palace to endure as a still-socialist building in a post-socialist city.

How socialist architects and planners worked collectively to urbanize and develop the global South during the Soviet era In the course of the Cold War, architects, planners, and contractors from socialist Eastern Europe engaged in a vibrant collaboration with those in West Africa and the Middle East in order to bring modernization to the developing world. Architecture in Global Socialism shows how their collaboration reshaped five cities in the global South: Accra, Lagos, Baghdad, Abu Dhabi, and Kuwait City. ?ukasz Stanek describes how local authorities and professionals in these cities drew on Soviet prefabrication systems, Hungarian and Polish planning methods, Yugoslav and Bulgarian construction materials, Romanian and East German standard designs, and manual laborers from across Eastern Europe. He explores how the socialist development path was adapted to tropical conditions in Ghana in the 1960s, and how East European architectural traditions were given new life in 1970s Nigeria. He looks at how the differences between socialist foreign trade and the emerging global construction market were exploited in the Middle East in the closing decades of the Cold War. Stanek demonstrates how these and other practices of global cooperation by socialist countries—what he calls socialist worldmaking—left their enduring mark on urban landscapes in the postcolonial world. Featuring an extensive collection of previously unpublished images, Architecture in Global Socialism draws on original archival research in sixteen countries and a wealth of in-depth interviews. This incisive book presents a new understanding of global urbanization and its architecture through the lens of socialist internationalism, challenging long-held notions about modernization and development in the global South.

Politics in Israel: Governing a Complex Society is the first textbook on Israel to utilize a historical-sociological approach, telling the story of Israeli politics rather than simply presenting a series of dry facts and figures. The book emphasizes six specific dimensions of the conduct of Israeli politics: the weight of historical processes, the struggle between different groups over how to define the country's identity, changing understandings of Zionism, a changing political culture, the influence of the external threat environment, and the inclusive nature of the democratic process. These themes offer students a framework to use for understanding contemporary political events within the country. Politics in Israel also includes several chapters on topics not previously addressed in competing texts, including historical conditions that led to the emergence of Zionism in Israel, the politics of the Arab minority, and interest groups and political protest.

The most significant architectural spaces in the world are now entirely empty of people. The data centres, telecommunications networks, distribution warehouses, unmanned ports and industrialised agriculture that define the very nature of who we are today are at the same time places we can never visit. Instead they are occupied by server stacks and hard drives, logistics bots and mobile shelving units, autonomous cranes and container ships, robot vacuum cleaners and internet-connected toasters, driverless tractors and taxis. This issue is an atlas of sites, architectures and infrastructures that are not built for us, but whose form, materiality and purpose is configured to anticipate the patterns of machine vision and habitation rather than our own. We are said to be living in a new geological epoch, the Anthropocene, in which humans are the dominant force shaping the planet. This collection of spaces, however, more accurately constitutes an era of the Post-Anthropocene, a period where it is technology and artificial intelligence that now computes, conditions and constructs our world. Marking the end of human-centred design, the issue turns its attention to the new typologies of the post-human, architecture without people and our endless expanse of Machine Landscapes. Unstoppable is a word defined as "difficult or impossible to preclude or stop." As a human quality, it is something that we associate with people such as sports superstars, those who do whatever it takes to inspire others and lead teams to the greatest of victories. Sometimes, an idea or person can become unstoppable. Unstoppable, like Charles Lindbergh crossing the Atlantic in a solo flight when no one had thought it was possible, or track star Roger Bannister breaking the four-minute mile barrier. Not everyone can be an explorer or a great athlete, but anyone can be unstoppable in their chosen endeavors in life. If you are willing to possess an unwavering determination to succeed and a consistent willingness to learn and evolve, you can become unstoppable and triumph too. This book is about a personal struggle, one in which the author awoke from a coma after a terrible accident and faced a life of permanent paralysis. A long battle of driven determination resulted in Yanni Raz regaining his health and becoming a self-made millionaire after migrating from his native Israel to the United States. Through careers as a musician, a Starbucks barista, a salesman, a real estate whiz, a professional poker player and a hard money lender, Yanni learned reliable principles and the skills necessary for success. Unstoppable covers many topics including controlling your life, making the best decisions, creating new opportunities, properly assessing signals, expertly negotiating, and succeeding by storytelling across the media landscape. You'll learn about integrity in business, asset diversification, and many other life tips that thousands of people learn from Yanni on a daily basis. It is time to become fearless and lead a powerful life. With Yanni's new book Unstoppable, you can do just that.

Politics for a Post-Pandemic World

The History of Graphic Design, 1960-Today

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to

facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs

The future of politics after the pandemic COVID-19 exposed the pre-existing conditions of the current global crisis. Many Western states failed to protect their populations, while others were able to suppress the virus only with sweeping social restrictions. In contrast, many Asian countries were able to make much more precise interventions. Everywhere, lockdown transformed everyday life, introducing an epidemiological view of society based on sensing, modeling, and filtering. What lessons are to be learned? The Revenge of the Real envisions a new positive biopolitics that recognizes that governance is literally a matter of life and death. We are grappling with multiple interconnected dilemmas—climate change, pandemics, the tensions between the individual and society—all of which have to be addressed on a planetary scale. Even when separated, we are still enmeshed. Can the world govern itself differently? What models and philosophies are needed? Bratton argues that instead of thinking of biotechnologies as something imposed on society, we must see them as essential to a politics of infrastructure, knowledge, and direct intervention. In this way, we can build a society based on a new rationality of inclusion, care, and prevention.

This book fills a gap between high-level overview texts that are often too general and low-level detail oriented technical handbooks that lose sight the "big picture". This book discusses SOA from the low-level perspective of middleware, various XML-based technologies, and basic service design. It also examines broader implications of SOA, particularly where it intersects with business process management and process modeling. Concrete overviews will be provided of the methodologies in those fields, so that students will have a hands-on grasp of how they may be used in the context of SOA.

Health Psychology is essential reading for all students and researchers of health psychology. Organized into four sections, the 6th edition is structured with a clear emphasis on theory and evidence throughout. This textbook maintains its popular and balanced approach between the biomedical and psychosocial model, while strengthening its focus on critical thinking and behaviour change. Key updates include: • Learning objectives: Each chapter opens with a set of learning objectives, which clearly outlines the knowledge, understanding and skills you will acquire from each chapter. • Case studies: Each chapter includes a case study to illustrate how the key theories and ideas are relevant to everyday life. • Through the Eyes of Health Psychology: A brand new feature to show how a health psychologist might analyse each case study using the theories and concepts presented throughout the book. • Health promotion: A whole chapter devoted to the theories and evidence relevant to behaviour change and includes a new section on integrated approaches and the drive to develop a new science of behaviour change. • Thinking critically about: The process of thinking critically is introduced in the first chapter which describes how to think critically about theory, methods, measurement and research design. Each chapter has its own 'Thinking critically about ...' section at the end to highlight problems with specific theories and research areas. This section includes critical thinking questions and a 'Some problems with...' section to form the basis of class discussions and enable students to be more critical in their thinking and writing.

Understanding Price Action

The Revenge of the Real

Macworld

PC Magazine

The Captain of Battery Park

Understanding Price Action is a must read for both the aspiring and professional trader who seek to obtain a deeper understanding of what is commonly referred to as "trading from the naked chart." With hundreds of examples commented on in great detail, Volman convincingly points out that only a handful of price action principles are responsible for the bulk of fluctuations in any market session-and that it takes common sense, much more than mastery, to put these essentials to one's benefit in the trading game. The power of the book lies in the exceptional transparency with which the concepts and trading techniques are put forth. Besides offering the reader a comprehensive study on price action mechanics, included within is a series of six months of consecutive sessions of the eur/usd 5-minute. Containing nearly 400 fully annotated charts, this section alone harbors a massive database of intraday analysis, not found in any other trading guide. Written with a razor-sharp eye for practical detail, yet in a highly absorbable manner, Understanding Price Action breathes quality from every page and is bound to become a classic in the library of any trader who is serious about his education.
