**Software Architecture 2**

Over the past 20 years, software architectures have significantly contributed to the development of complex and distributed systems. Nowadays, it is recognized that one of the critical problems in the design and development of any complex software system is its architecture, i.e. the organization of its architectural elements. Software Architecture presents the software architecture paradigms based on objects, components, services and models, as well as the various architectural techniques and methods, the analysis of architectural qualities, models of representation of architectural templates and styles, their formalization, validation and testing and finally the engineering approach in which these consistent and autonomous elements can be tackled.

What happens when people turn their everyday experience into data: an introduction to the essential ideas and key challenges of self-tracking. People keep track. In the eighteenth century, Benjamin Franklin kept charts of time spent and virtues lived up to. Today, people use technology to self-track: hours slept, steps taken, calories consumed, medications administered. Ninety million wearable sensors were shipped in 2014 to help us gather data about our lives. This book examines how people record, analyze, and reflect on this data, looking at the tools they use and the communities they become part of. Gina Neff and Dawn Nafus describe what happens when people turn their everyday experience—in particular, health and wellness-related experience—into data, and offer an introduction to the essential ideas and key challenges of using these technologies. They consider self-tracking as a social and cultural phenomenon, describing not only the use of data as a kind of mirror of the self but also how this enables people to connect to, and learn from, others. Neff and Nafus consider what's at stake: who wants our data and why; the practices of serious self-tracking enthusiasts; the design of commercial self-tracking technology; and how self-tracking can fill gaps in the healthcare system. Today, no one can lead an entirely untracked life. Neff and Nafus show us how to use data in a way that empowers and educates.

"Raw, direct, and powerful...This work is vitally important."—Ken Stern, former CEO of National Public Radio As a captain in the Army National Guard, Benjamin Tupper spent a year in Afghanistan. Separated from most of his unit, Ben, along with his partner Corporal Radoslaw “Ski” Polanski, served in an Embedded Training Team, teaching, training, and leading into combat the green Afghan troops. But what they experienced went well beyond the assigned mission, and the war proved to be a mix of drudgery, absurdity, and ever-present dangers. Writing and recording from a remote outpost, Tupper began to share his stories with Americans back home. His boots-on-the-ground dispatches were broadcast on NPR's Morning Edition and published on Slate.com's military blog, The Sandbox. In Greetings from Afghanistan: Send More Ammo, Benjamin Tupper's chronicling of life under fire pulls the reader into the realities of war with poignancy, humor, and vivid reality, offering a unique and compelling firsthand view of the Afghan people, their culture, and a battle for survival that began long before the Americans arrived.

You've done all the right things to lose weight and balance your blood sugar. You've counted calories, exercised, and switched to a low-glycemic diet—all with no long-term success. In Belly Fat Effect, Mike Mutzel provides the missing links that are standing between you and weight control and blood sugar management. New research has proved that the 'calories in-calories out' path to weight loss is obsolete. It just doesn't work for good reason: Eating fewer calories and exercising more doesn't account for the waist-busting influence of inflammatory foods, gut bacteria, and other metabolic influences. Belly Fat Effect translates the new science into useable information that will give you a winning edge over your excess pounds and roller-coaster blood sugar levels.
