Skype for Business Unleashed This is the most comprehensive, realistic, and useful guide to Skype for Business Server 2015, Microsoft's most powerful unified communications system. Four leading Microsoft unified communications consultants share in-the-trenches guidance for planning, integration, migration, deployment, administration, and more. The authors thoroughly introduce Skype for Business 2015's components and capabilities, as well as changes and improvements associated with the integration of popular Skype consumer technologies. You'll find detailed coverage of IP voice, instant messaging, conferencing, and collaboration; and expert guidance on server roles, multi-platform clients, security, and troubleshooting. Reflecting their unsurpassed experience, the authors illuminate Microsoft's new cloud-based and hybrid cloud architectures for unified communications, showing how these impact networking, security, and Active Directory. They cover SDN for unified communications; interoperation with consumer Skype and legacy video conferencing; quality optimization, mobile improvements, and much more. Throughout, the authors combine theory, step-by-step configuration instructions, and best practices from real enterprise environments. Simply put, you'll learn what works—and how it's done. Detailed Information on How To · Plan deployments, from simple to highly complex · Deploy Skype for Business Server 2015 as a cloud or cloud-hybrid solution · Walk step by step through installation or an in-place upgrade · Overcome “gotchas” in migrating from Lync Server 2010 or 2013 · Leverage new features available only in cloud or cloud-hybrid environments · Implement and manage Mac, mobile, Windows, browser, and virtualized clients · Establish server roles, including front end, edge, and mediation server · Make the most of Skype for Business Server 2015's enhanced mobile experience · Manage external dependencies: network requirements, dependent services, and security infrastructure · Efficiently administer Skype for Business Server 2015 · Provide for high availability and disaster recovery · Integrate voice, telephony, and video, step by step · Avoid common mistakes, and discover expert solutions and workarounds Category: Business Applications Covers: Skype for Business User Level: Intermediate—Advanced

This is a cookbook for communicating between a PC and a Microcontroller using the FTDI FT232R USB UART IC, and has lots of software and hardware examples. The code is in C# and Visual Basic Express allowing you to build Graphical User Interfaces and add Serial Port functions to create communications programs. Part 1 - Serial Port via USB Made Almost Easy -- In the first section you will learn the basics of serial communications using a USB UART bridge. You will further learn to write a simple terminal program in C# and Visual Basic Express .NET. Part 2 - PC to Microcontroller Conversations -- In the second section you will build on what you have learned and get into more details about GUI programming, using the SerialPort class, and some useful software tools such as XML. You will bring it all together by building a Developer Terminal, which will have most of the bells and whistles that you would want for communicating between a PC and a microcontroller. You will end this section with some neat hardware experiments. Part 3 - The FTDI FT232R -- In the final section you will chuck the serial port paradigm and communicate directly with the FT232R. You will learn how to use the Smiley Micro port of the FTDI D2XX driver, you will do some more hardware experiments bit-banging the BBUSB pins, and finally you will build a software programmer for the FT232R.

Fabric Manufacturing Technology: Weaving and Knitting gives the reader a brief idea about the processes involved in fabric formation methods, namely weaving and knitting. It includes mechanisms involved beginning with primitive handlooms to the latest shuttleless looms, and from hand knitting to the ultra-modern electronic knitting machines. Various design applications of woven and knitted fabrics in the medical field, automotive engineering, aeronautical engineering, protective clothing, and more. Features Covers the principles involve numerous operations of weaving and knitting processes Gives a basic understanding of fabric production, quality control and production Provides a summary of the fabric manufacturing, weaving, knitting and nonwovens Discusses principles of mechanisms, as well as details of present-day machinery, with illustrations Explores the latest developments in knitting production garment (Shima Seiki) and Knit and Wear (Stoll), CAD/CAM production and simulation of woven fabrics This book is aimed at senior undergraduate students in textile processing and manufacturing.

Python Programming is designed as a textbook to fulfil the requirements of the first-level course in Python programming. It is suited for undergraduate degree students of computer science engineering, information technology as well as computer applications. The book aims to introduce the students to the fundamentals of computing and the concepts of Python programming language, and enable them to apply these concepts for solving real-world problems.

This complete guide to planning, deploying and managing Wi-Fi telephone networks explains the economics of Wi-Fi, so network engineers can show the return-on-investment from implementing Wi-Fi. The book also examines key Wi-Fi technology issues.

Telemedicine and telehealth have consistently been shown to be effective for remote areas or limited-resource locations, regular medical and surgical practice, primary care, second opinion, extreme conditions, major crises, and disaster management. The aim of this book is to bring all aspects of telemedicine and e-health to the reader, in a simple, make-sense approach, in one tome. The book is structured in four parts with 29 chapters written by the best experts in the field from around the world, including clinicians, scientists, and administrators of telemedicine programs. Part I deals with basic principles of telemedicine and telepresence. Historical journeys of telemedicine and strategies, building sustainable telemedicine and telehealth programs in the United States and in the Balkans, as well as incorporation of telemedicine in the current ongoing pandemic COVID-19 are well described and are must read. Current technological developments, rules and regulations, legal and business aspects and consent are also addressed. Part II describes strategies for building sustainable telemedicine and telehealth programs. Telehealth patient portals and public-private partnership modes of technology, as well the role of international telemedicine and how to make it work, are valuable chapters of great significance. Part III describes outcomes-based evidence clinical applications of telemedicine in trauma, burns, intensive care, pediatric care, psychiatry, and stroke. Finally, one important chapter for the readers is the telemedicine for prison and jail population. The final part, Part IV depicts surgical telementoring and teleproctoring, a chapter written by 18 various surgical experts, a true gem for the readers. The book ends with promises and hurdles of telemedicine in austere conditions. Telemedicine, Telehealth and Telepresence serves as a valuable resource that focuses on providing patients care from a distance using store and forward technology to live actual performance of operations at a distance.

This thoroughly revised textbook provides a description of current networking technologies and protocols as well as important new tools for network performance analysis based on queuing theory. The third edition adds topics such as network virtualization and new related architectures, novel satellite systems (such as Space X, OneWeb), jitter and its impact on streaming services, packet level FEC techniques and network coding, new Markovian models, and advanced details on M/G/1 queuing models. The author also adds new selected exercises throughout the chapters and a new version of the slides and the solution manual. The book maintains its organization with networking technologies and protocols in Part I and then theory and exercises with applications to the different technologies and protocols in Part II. This book is intended as a textbook for master level courses in networking and telecommunications sectors.

Still the Best Delphi Resource--Now Fully Updated and Expanded Whether you're new to Delphi or just making the move from an earlier version, Mastering Delphi 7 is the one resource you can't do without. Practical, tutorial-based coverage helps you master essential techniques in database, client-server, and Internet programming. And the insights of renowned authority Marco Cantù give you the necessary knowledge to take advantage of what's new to Delphi 7--particularly its support for .NET. Coverage includes: * Creating visual web applications with IntraWeb * Writing sockets-based applications with Indy * Creating data-aware controls and custom dataset components * Creating database applications using ClientDataSet and dbExpress * Building client-server applications using InterBase * Interfacing with Microsoft's ADO * Programming for a multi-tiered application architecture * Taking advantage of Delphi's support for COM, OLE Automation, and COM+ * Taking advantage of Delphi's XML and SOAP support * Implementing Internet protocols in your Delphi app * Creating UML class diagrams using ModelMaker * Visually preparing reports using RAVE * Using the Delphi language to create your first .NET programs

The engineering life cycle for complex systems design and development, where partners are dispersed in different locations, requires the set-up of adequate and controlled processes involving many different disciplines. The "design integration" and the final "system physical/functional integration and qualification" imply a high degree of cross-interaction among the partners. The - place technical information systems supporting the life cycle activities are specialized with respect to the needs of each actor in the process chain and are highly heterogeneous between them. To globally innovate in-place processes, specialists must be able to work as a unique team, in a virtual enterprise model. To this aim, it is necessary to make interoperable the different technical information systems and to define cooperative engineering processes, which take into account "distributed roles", "shared activities", and "distributed process controls". In this frame an innovative study, aimed at addressing this process with the goal of identifying proper solutions – in terms of design, implementation, and deployment – has been carried out with the support of the European Community and the participation of major industrial companies and research centers.

This book provides the first academically rigorous description and critical analysis of the Higher Education system in the Kingdom of Saudi Arabia, and of the vision, strategies and policy imperatives for the future development of Saudi universities. The government of Saudi Arabia has recognized in both policy and practice the necessity of developing its university system to world-class standard. Significantly increasing access and participation in Higher Education across a range of traditional and non-traditional disciplines is directly relevant to the future social and economic growth of the country. This book addresses the way in which Saudi Arabia is moving to develop a quality university system that balances the need for students to gain the knowledge, skills and 'ways of doing' necessary to operate effectively on the world stage while simultaneously maintaining and demonstrating the fundamental values of the Islamic religion and culture. The book provides a description and critical analysis of the key components of the Saudi Higher Education system, and of system-level responses to the challenges and opportunities facing Saudi universities. It is written by a team of Saudi academics and authors of international standing from non-Saudi universities so as to provide both internal and external perspectives on all issues and to place information and ideas in the context of the international Higher Education scene.
