How memetic media—aggregate texts that are collectively created, circulated, and transformed—became a part of public conversations that shape broader cultural debates. Internet memes—digital snippets that can make a joke, make a point, or make a connection—are now a lingua franca of online life. They are collectively created, circulated, and transformed by countless users across vast networks. Most of us have seen the cat playing the piano, Kanye interrupting, Kanye interrupting the cat playing the piano. In The World Made Meme, Ryan Milner argues that memes, and the memetic process, are shaping public conversation. It's hard to imagine a major pop cultural or political moment that doesn't generate a constellation of memetic texts. Memetic media, Milner writes, offer participation by reappropriation, balancing the familiar and the foreign as new iterations intertwine with established ideas. New commentary is crafted by the mediated circulation and transformation of old ideas. Through memetic media, small strands weave big conversations. Milner considers the formal and social dimensions of memetic media, and outlines five basic logics that structure them: multimodality, reappropriation, resonance, collectivism, and spread. He examines how memetic media both empower and exclude during public conversations, exploring the potential for public voice despite everyday antagonisms. Milner argues that memetic media enable the participation of many voices even in the midst of persistent inequality. This new kind of participatory conversation, he contends, complicates the traditional culture industries. When age-old gatekeepers intertwine with new ways of sharing information, the relationship between collective participation and individual expression becomes ambivalent. For better or worse—and Milner offers examples of both—memetic media have changed the nature of public conversations.

"Roxane Gay is so great at weaving the intimate and personal with what is most bewildering and upsetting at this moment in culture. She is always looking, always thinking, always passionate, always careful, always right there." — Sheila Heti, author of How Should a Person Be? A New York Times Bestseller Best Book of the Year: NPR • Boston Globe • Newsweek • Time Out New York • Oprah.com • Miami Herald • Book Riot • Buzz Feed • Globe and Mail (Toronto) • The Root • Shelf Awareness A collection of essays spanning politics, criticism, and feminism from one of the most-watched cultural observers of her generation. In these funny and insightful essays, Gay takes us through the journey of her evolution as a woman (Sweet Valley High) of color (The Help) while also taking readers on a ride through culture of the last few years (Girls, Django in Chains) and commenting on the state of feminism today (abortion, Chris Brown). The portrait that emerges is not only one of an incredibly insightful woman continually growing to understand herself and our society, but also one of our culture. Bad Feminist is a sharp, funny, and spot-on look at the ways in which the culture we consume becomes who we are, and an inspiring call-to-arms of all the ways we still need to do better, coming from one of our most interesting and important cultural critics.

Straight from the heart!real-life couples share inspiring, edifying stories of Mars and Venus in love. Millions of readers have learned about relationships from John Gray's previous bestsellers, such as Men Are from Mars, Women Are from Venus; Mars and Venus on a Date; and Mars and Venus in the Bedroom. Inspired by this enthusiasm, Gray asked a number of readers to share their own stories of how they've put his principles to work in their relationships. The result is this amazing collection of first-person accounts!along with Gray's own enlightening commentary!that will have you laughing, crying, and nodding in recognition. Gray's contributors answer such questions as: What problems have you had in your relationship, and how have you overcome them? What special things do you and your partner do for each other? How do you best communicate with each other? How do you practice what you've learned? How does your love feel different now from how it felt before? Their answers illustrate more eloquently than any textbook how to use Gray's advice and counsel to create your own fulfilling, healthy, and loving relationships.

The first edition of this award-winning book attracted a wide audience. This second edition is both a joy to read and a useful classroom tool. Unlike traditional textbooks, it requires no mathematical prerequisites and can be read around the mathematics presented. If used as a textbook, the mathematics can be prioritized, with a book both students and instructors will enjoy reading. Secret History: The Story of Cryptology, Second Edition incorporates new material concerning various eras in the long history of cryptology. Much has happened concerning the political aspects of cryptology since the first edition appeared. The still unfolding story is updated here. The first edition of this book contained chapters devoted to the cracking of German and Japanese systems during World War II. Now the other side of this cipher war is also told, that is, how the United States was able to come up with systems that were never broken. The text is in two parts. Part I presents classic cryptology from ancient times through World War II. Part II examines modern computer cryptology. With numerous real-world examples and extensive references, the author skillfully balances the history with mathematical details, providing readers with a sound foundation in this dynamic field. FEATURES Presents a chronological development of key concepts Includes the Vigenère cipher, the one-time pad, transposition ciphers, Jefferson's wheel cipher, Playfair cipher, ADFGX, matrix encryption, Enigma, Purple, and other classic methods Looks at the work of Claude Shannon, the origin of the National Security Agency, elliptic curve cryptography, the Data Encryption Standard, the Advanced Encryption Standard, public-key cryptography, and many other topics New chapters detail SIGABA and SIGSALY, successful systems used during World War II for text and speech, respectively Includes quantum cryptography and the impact of quantum computers

This book presents the best articles and columns published in Java Report from 1997 and 1999. Each article is independent of any specific version of Java and relies mainly on those classes that are now part of the standard Java class library and APIs. Also, each article and column discusses Java topics and implementations that are not readily available in a single book. The book serves as an excellent reference to anyone involved with Java. The reader can learn more about the language, perform analysis, design and modeling, work on specific implementations, check performance, and perform testing. This book presents the good ideas of people who have used Java for "Real" applications.

Photonics has long been considered an attractive substrate for next generation implementations of machine-learning concepts. Reservoir Computing tremendously facilitated the realization of recurrent neural networks in analogue hardware. This concept exploits the properties of complex nonlinear dynamical systems, giving rise to photonic reservoirs implemented by semiconductor lasers, telecommunication modulators and integrated photonic chips.

"The perceptions of the role of women and men in families have changed over the past few decades. Men are no longer perceived as the economic providers to families. The role of men in the family has undergone many "diverse demographic, socio-economic and cultural transformations" impacting the formation, stability and overall well-being of families. In light of this development, DESA's Division for Social Policy and Development (DSPD) launched a new publication on "Men in Families and Family Policy in a Changing World" on 17 February focusing on the shifting roles and views of men in families."--Provided by publisher. This open access handbook presents a multidisciplinary and multifaceted perspective on how the 'digital' is simultaneously changing Russia and the research methods scholars use to study Russia. It provides a critical update on how Russian society, politics, economy, and culture are reconfigured in the context of ubiquitous connectivity and accounts for the political and societal responses to digitalization. In addition, it answers practical and methodological questions in handling Russian data and a wide array of digital methods. This edited collection brings together a selection of expert authors and draws on a wide range of case studies, geographies, and perspectives to explore the links between forced migration and energy access. This book addresses the paucity of academic study on how energy is delivered to the millions of people currently forcibly displaced. The contributions throughout assess the current energy governance regimes, models of delivery, and innovative solutions that are dictating how energy is – and can be – provided to those who have been forced to move away from their homes. By bringing together author-teams of practitioners, academics, businesses, and policy makers, this collection encourages interdisciplinary dialogue about the best way of approaching energy provision for the forcibly displaced. This book will be of great interest to students and scholars of energy access and equity, environmental justice and equity, and migration and refugee studies.

Tadhg Barry was the last high-profile victim of the crown forces during the Irish War of independence. A veteran republican, trade unionist, journalist, poet, GAA official and alderman on Cork Corporation, he was shot dead in Ballykinlar internment camp on 15 November 1921. Barry's tragic death was a huge, but subsequently largely forgotten, event in Ireland. Dublin came to a standstill as a quarter of a million people lined the streets and the IRA had its last full mobilisation before the Treaty split. The funeral in Cork echoed those of Barry's comrades, the martyred lord mayors Tomás MacCurtain and Terence MacSwiney. The Anglo-Irish Treaty was signed three weeks later, all internees were released and the movement that elevated him to hero/martyr status was ripped asunder in the ensuing civil war. The name of Tadhg Barry became lost in the smoke. This is the first biography of a fascinating activist described by his British enemies as an 'Utter disloyalist' and by a comrade as 'a characteristic product of Rebel Cork – courageous, kindly, generous to a fault, bold and daring, and independent in speech and action'. It offers fascinating new perspectives on the dynamics of Ireland's long revolution, including glimpses of the roads not taken.

Her rallying cry was famous: "Pray for the dead and fight like hell for the living." A century ago, Mother Jones was a celebrated organizer and agitator, the very soul of the modern American labor movement. At coal strikes, steel strikes, railroad, textile, and brewery strikes, Mother Jones was always there, stirring the workers to action and enraging the powerful. In this first biography of "the most dangerous woman in America," Elliott J. Gorn proves why, in the words of Eugene V. Debs, Mother Jones "has won her way into the hearts of the nation's toilers, and . . . will be lovingly remembered by their children and their children's children forever."

Welcome to the 9rst volume of the Yearbook of Nanotechnology in Society! Nanotechnology, hailed as "the next industrial revolution" (NSTC 2000) and c-tiqued for being little more than "hype" (Berube 2006), is the site of a great deal of social and intellectual contest. With some ten billion dollars being spent worldwide on nanotechnology research and development annually and a market forecast of trillions of dollars in sales in the medium-term future (Lux Research 2006), nations and firms are pursuing nano-related goals with high levels of both effort and - pectations. Yet according to the Woodrow Wilson International Center's web-based Nanotechnology Consumer Products Inventory, most of the more than 500 na- products on the market as of this writing are basic consumer items--cosmetics, clothing, athletic equipment and the like--with modest, incremental improvements on their non-nano counterparts. Nanotechnology is also the site of an increasing amount of scholarship dedicated to understanding the interactions between society and an emerging knowled- based technological endeavor. Searching the Web of Science indices in social s- ence and humanities for nanotech* and nanoparticle*, for example, yields 231 hits 1 since 1990, but 75 percent of these occur in 2004 through 2007. This scholarship attempts to fathom the implications of nanotechnologies for society, as well as the implications for nanotechnologies of society. Some of it is also engaged in dialogue with both the public and with nanotechnology researchers about the hope and the hype described above.

This book focuses on how to formulate a mental health response with respect to the unique elements of pandemic outbreaks. Unlike other disaster psychiatry books that isolate aspects of an emergency, this book unifies the clinical aspects of disaster and psychosomatic psychiatry with infectious disease responses at the various levels, making it an excellent resource for tackling each stage of a crisis quickly and thoroughly. The book begins by contextualizing the issues with a historical and infectious disease overview of pandemics ranging from the Spanish flu of 1918, the HIV epidemic, Ebola, Zika, and many other outbreaks. The text acknowledges the new infectious disease challenges presented by climate changes and considers how to implement systems to prepare for these issues from an infection and social psyche perspective. The text then delves into the mental health aspects of these crises, including community and cultural responses, emotional epidemiology, and mental health concerns in the aftermath of a disaster. Finally, the text considers medical responses to situation-specific trauma, including quarantine and isolation-associated trauma, the mental health aspects of immunization and vaccination, survivor mental health, and support for healthcare personnel, thereby providing guidance for some of the most alarming trends facing the medical community. Written by experts in the field, Psychiatry of Pandemics is an excellent resource for infectious disease specialists, psychiatrists, psychologists, immunologists, hospitalists, public health officials, nurses, and medical professionals who may work patients in an infectious disease outbreak.

From sites like Hollaback! and Everyday Sexism, which document instances of street harassment and misogyny, to social media-organized movements and communities like #MeToo and #BeenRapedNeverReported, feminists are using participatory digital media as activist tools to speak, network, and organize against sexism, misogyny, and rape culture. As the first book-length study to examine how girls, women, and some men negotiate rape culture through the use of digital platforms, including blogs, Twitter, Facebook, Tumblr, and mobile apps, the authors explore four primary questions: What experiences of harassment, misogyny, and rape culture are being responded to? How are participants using digital media technologies to document experiences of sexual violence, harassment, and sexism? Why are girls, women and some men choosing to mobilize digital media technologies in this way? And finally, what are the various experiences of using digital technologies to engage in activism? In order to capture these diverse experiences of doing digital feminist activism, the authors augment their analysis of this media (blog posts, tweets, and selfies) with in-depth interviews and close-observations of several online communities that operate globally. Ultimately, the book demonstrates the nuances within and between digital feminist activism and highlight that, although it may be technologically easy for many groups to engage in digital feminist activism, there remain emotional, mental, or practical barriers which create different experiences, and legitimate those feminist voices, perspectives, and experiences over others.

This book sets out to build bridges between the domains of photonic device physics and neural networks, providing a comprehensive overview of the emerging field of "neuromorphic photonics." It includes a thorough discussion of evolution of neuromorphic photonics from the advent of fiber-optic neurons to today ' s state-of-the-art integrated laser neurons, which are a current focus of international research. Neuromorphic Photonics explores candidate interconnection architectures and devices for integrated neuromorphic networks, along with key functionality such as learning. It is written at a level accessible to graduate students, while also intending to serve as a comprehensive reference for experts in the field.

Popular marriage counselor and seminar leader John Gray provides a unique, practical and proven way for men and women to communicate and relate better by acknowledging the differences between them. Once upon a time Martians and Venusians met, fell in love, and had happy relationships together because they respected and accepted their differences. Then they came to earth and amnesia set in: they forgot they were from different planets. Using this metaphor to illustrate the commonly occurring conflicts between men and women, Gray explains how these differences can come between the sexes and prohibit mutually fulfilling loving relationships. Based on years of successful counseling of couples, he gives advice on how to counteract these differences in communication styles, emotional needs and modes of behavior to promote a greater understanding between individual partners. Gray shows how men and women react differently in conversation and how their relationships are affected by male intimacy cycles ("get close," "back off"), and female self-esteem fluctuations ("I'm okay," "I'm not okay"). He encourages readers to accept the other gender's particular way of expressing love, and helps men and women learn how to fulfill each other's emotional needs. With practical suggestions on how to reduce conflict, crucial information on how to interpret a partner's behavior and methods for preventing emotional "trash from the past" from invading new relationships, Men Are from Mars, Women Are from Venus is a valuable tool for couples who want to develop deeper and more satisfying relationships with their partners.

Our Watch partnered with Australia's National Research Organisation for Women's Safety (ANROWS) and the Victorian Health Promotion Foundation (VicHealth) to create Change the Story: A shared framework for the primary prevention of violence against women and their children in Australia.The framework draws upon the latest international evidence and consultations with over 400 stakeholders across Australia to explore what drives violence against women and what works to prevent it. It demonstrates that, while violence against women has no single cause, it is strongly associated with particular dimensions of gender inequality, in both public life and personal relationships. It asserts that an Australia where women and their children live free from violence is an achievable long-term goal, but one that can only be realised by addressing the drivers of this violence, which are deeply entrenched in our social and cultural norms structures and practices, across our communities and in our daily lives.Change the story details the key elements required to create a strategic, collaborative and consistent national approach to preventing violence against women. The framework." outlines 10 essential and supporting actions to prevent violence against women by addressing its gendered drivers and reinforcing factors" provides evidence-based guidance to government, the private sector, civil society and communities on how to lead, coordinate, resource and support effective prevention effort across Australia" aims to inform and support the development of policy and legislation, prevention programs, strategies and initiatives of all kinds, and advocacy.The framework demonstrates how, by working together, governments, organisations, communities and individuals can create a safer Australia built upon respect and equality.It offers a path towards this ultimate goal of social transformation, providing the necessary evidence, rationale and guidance to drive and support a significant and sustained nation-wide effort to prevent violence against women and their children.
