The Demo Docs System of instruction replicates the classroom experience by providing more “I get it” moments outside of class. We’ve talked to tons of POA instructors and our editors have even taken the accounting course (numerous times!) to figure out the following issue in this course that is consistent: Students understand (or “get it”) right after you do a problem in class, but as soon as they leave class, with each passing hour, their ability to do the problems again and complete their homework diminishes to the point of them either having to come to office hours to get help, or they just quit and get behind in the course. On top of this, you can end up getting behind in the course as well, in order to keep everyone on track. The Demo Docs system helps to recreate the “I get it” moments outside of class-- keeping both you and the students on track.

This second edition comes at a time of a paradigm shift in understanding of the molecular pathology and neuroscience of brain and spinal tumors of childhood and their mechanisms of growth within the developing brain. Excellent collaborative translational networks of researchers are starting to drive change in clinical practise through the need to test many ideas in trials and scientific initiatives. This text reflects the growing concern to understand the impact of the tumour and its treatment upon the full functioning of the child ' s developing brain and to integrate the judgments of the risks of acquiring brain damage with the risk of death and the consequences for the quality of life for those who survive. Information on the principles of treatment has been thoroughly updated. A chapter also records the extraordinary work done by advocates. All medical and allied professionals involved in any aspect of the clinical care of these patients will find this book an invaluable resource.
