In recent years, innovative texts in mathematics, science, foreign languages, and other fields have achieved dramatic pedagogical gains by abandoning the traditional encyclopedic approach in favor of teaching a shorter list of core principles in depth. Two well-respected writers and researchers, Bob Frank and Ben Bernanke, have shown that the less-is-more approach affords similar gains in introductory economics. The authors introduce a coherent short list of core principles and reinforce them by illustrating and applying each in numerous contexts. Students are periodically asked to apply these principles and to answer related questions and exercises. The BRIEF editions were developed for instructors who appreciate core principles approach, and desire a more manageable amount of content and slightly less rigor. In the brief editions, the authors made careful choices of material to eliminate and condense, in order to produce of more concise coverage. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

Principles of Microeconomics aims to bring economics to life for the first time student. Mankiw accomplishes this by writing a brief text which explains economics by the rules rather than the exceptions, and by balancing application with theory. He reveals to students how economics has relevance in their everyday lives, and through a strong policy orientation, shows them economics in action in the broader social arena. His conversational writing style succeeds in presenting the politics and science of economic theories to tomorrow's decision-makers. The Canadian edition maintains the virtues of the author's landmark U.S. text, while revising the content to reflect the differences of our small open economy.

Written by James Couch (University of Northern Alabama), the study guide consists of short chapter reviews, multiple-

choice quizzes, short answer questions, and potential exam essay questions for students to consider.

This brand-new principles of economics text is the most exciting new entry in years. Written by well-known and well-respected economists Frank, Ben Bernanke, Lars Osberg (Dalhousie University), Melvin Cross (Dalhousie University) and Brian MacLean (Laurentian University) the seeks to teach introductory students the core economic concepts--the essence of economics-- without overwhelming them with detail. An articulated short list of core principles is introduced and reinforced by illustrating and applying each principle in several contexts, and then students to work exercises to see what they have learned. The text seeks to create "Economic Naturalists"; that is, after reading the text will ask (and answer) questions about their economic environment. For example, students will see Braille dots on drive-up ATMs and ask why they are there. Peppered with such thought-provoking examples, Frank/Bernanke not only engage students, but teaches them to see each feature of their economic landscape as the reflection of an implicit or explicit cost-benefit calculation.
