Social Media Marketing: A Strategic Approach

FCS Mathematical Literacy L4

Manual Arts in the Junior High School, St. Cloud Public Schools

A Guide for High School Students and Instructors

A first attempt to develop a standardized agent communication language (ACL) resulted in KQML, probably the most widely used such language. However, a lot of technical work remains to be done. Even worse, so far, there seems to be little consensus on the basics of agent communication and there is no clear understanding of the semantics of individual speech acts or even of the basic concepts that should be used to define the semantics. This book documents two workshops on communication in MAS held in 1999, one on Specifying and Implementing Conversation Policies (SICP) and the other in Agent Communication Languages and presents the current state of the art of research in the field. A detailed introductory overview by the volume editors highlights a number of issues that play an important role in agent communication.

Creative Problem Solving for Kids

Teaching for Successful Intelligence

The way that we assess and overcome problems is an essential part of everyday life. Problem Solving provides a clear introduction to the underlying mental processes involved in solving problems. Drawing on research from cognitive psychology and neuroscience, it examines the methods and techniques used by both novices and experts in familiar and unfamiliar situations. This edition has been comprehensively updated throughout, and now features cutting-edge content on creative problem solving, insight and neuroscience. Each chapter is written in an accessible way, and contains a range of student-friendly features such as activities, chapter summaries and further reading. The book also provides clear examples of studies and approaches that help the reader fully understand important and complex concepts in greater detail. Problem Solving fully engages the reader with the difficulties and methodologies associated with problem solving. This book will be of great use to undergraduate students of cognitive psychology, education and neuroscience, as well as readers and professionals with an interest in problem solving.

This book constitutes the refereed proceedings of the 8th International Conference on Parallel Problem Solving from Nature, PPSN 2004, held in Birmingham, UK, in September 2004. The 119 revised full papers presented were carefully reviewed and selected from 358 submissions. The papers address all current issues in biologically inspired computing; they are organized in topical sections on theoretical and foundational issues, new algorithms, applications, multi-objective optimization, co-evolution, robotics and multi-agent systems, and learning classifier systems and data mining.

History Education is a politically contested subject. It can be used to both promote xenophobia and to develop critical thinking, multiple perspectives, and tolerance. Accordingly, this book critically examines complex issues and constructivist approaches that make history relevant to students' understanding of the modern world. As such, it has global appeal especially in North and South America, Canada, Europe and Asia. The book's authors address the major challenges that History Education faces in an era of globalisation, digital revolution and international terror, nationalism and sectarian and religious conflict and warfare. Central to this volume are controversial issues, trauma, and questions of personal and national identity from a wide range of international settings and perspectives. The research in this book was undertaken by leading history educators from every continent. Their interdisciplinary research represents an important contribution to the teaching of social sciences, social psychology, civic education programmes, history and history education in schools, colleges and universities. The book offers new approaches to history educators at all levels. In addition, the chapters offer potential as required reading for students to both develop an international perspective and to compare and contrast their own situations with those that the book covers. Section I considers issues related to identity; how can history education promote social coherence in multicultural societies, in societies divided by sectarianism, or countries adapting to regime changes, whether Communist or Fascist, including, for example, South Africa, previously Communist countries of Eastern Europe, and previous dictatorships in South America and Western Europe. It discusses such questions as: How important is it that students learn the content of history through the processes of historical enquiry? What should that content be and who should decide it, educators or politicians? What is the role of textbooks and who should write and select them? Should history be taught as a discrete discipline or as part of a citizenship or social sciences curriculum? Sections II and III explore ways in which memory of sensitive issues related to the past, to war, or to massacres may be addressed. Are there new methodologies or approaches which make this possible? How can students understand situations involving intolerance and injustice?

Provides 40 research-based, illustrated lessons and demonstrates how to design units that help students apply analytical, creative, and practical thinking skills to solve problems and make decisions.

First Published in 1989. Routledge is an imprint of Taylor & Francis, an informa company.

This is the first book to address moral reasoning and socioscientific discourse. It provides a theoretical framework to reconsider what a "functional view" of scientific literacy entails, by examining how nature of science issues, classroom discourse issues, cultural issues, and science-technology-society-environment case-based issues contribute to habits of mind about socioscientific content. The text covers philosophical, psychological and pedagogical considerations underpinning moral reasoning, as well as the status of socioscientific issues in science education.
