The rising of the Lenten Moon signaled the beginning of a time of mournful respect for the death of Christ at the hands of the Romans. And two thousand years later the rising of the same full moon marked the beginning of a quest of discovery and accountability. To expose those who were entrusted with preserving life of committing acts of reckless abandonment. Deceit and arrogance were pieces of a failed orchestration that resulted in a tragic death. A missed diagnosis, the dodging of responsibility and the alchemy of leech saliva and snake venom were professional interventions that caused the instant clotting of the patients blood. Thirty one days of decisions and second-guessing tilled the soil of doubt as self inflicted guilt produced its fruit of reckoning. A reckoning that not only changed the lives of the guilty, but also provided insightful tutorials and saved my life in the process.

This edition of Bouncebacks! Emergency Medicine books examines the bounceback visit, putting the reader in the footsteps of the clinician as the patient

deteriorates. The story pauses at important decision points as possible management strategies are reviewed in a literature-based fashion, followed by a revelation of the path chosen by the actual provider. As the patient's course progresses, we reach additional decision points and address further clinical questions. In addition to our chapter authors, many with expertise in critical care emergency medicine, we have an all-star lineup of expert-whisperers: first an EM/critical care section editor (below) and second, EMCRIIT.org's double-boarded critical care guru, Scott Weingart. Their comments are inserted in grey boxes and are intended to give tips and tricks borne of experience and to provide context to the literature, "as if" they are standing over our shoulder and advising during a resuscitation. Additionally, there are three chapters where we address the medical-legal aspects of care. Enter Greg Henry MD, past president of The American College of Emergency Physicians (ACEP) and one of the most experienced physician medical-legal experts in the country. He opines on the approach that both the defense and plaintiff would likely pursue and, by extension, how we can make patients safer through our evaluation and documentation before there is an adverse outcome. Whereas, these chapters contain the actual documentation from the ED chart, a very few chapters have slight modifications to the final aspects of the return visit at decision point 3, to allow for exploration of different critical care scenarios. There is still plenty of commentary on the documentation, missed red-flags, and what could have been done to improve care at the initial visit. Our goal is to make each chapter challenging, dynamic, and realistic... to move us from "standard of care" to "excellence in care." Book Review: "It's back, it's Bouncebacks! One of the mostly widely read and highly regarded education series in all of Emergency Medicine. Clinicians fear the medical malpractice landscape, but Mike Weinstock and the team give you all the tools you need to protect yourselves. Documentation people, documentation. Now with a critical care version. Read this book, sleep better at night, as simple as that! Love, love this series!" -- Mel Herbert, MD, MBBS, BMedSci, FACEP, FAAEM Professor of Emergency Medicine at the Keck School of Medicine LAC + USC Medical Center, Owner and Editor of EM: RAP Looking for an up-to-date, how-to, evidence-based wound care reference? Emergency vascular and endovascular practice comprises almost half the workload undertaken by the majority of vascular surgeons. Most vascular emergencies are characterised by the sudden occlusion, rupture or injury of a blood vessel placing organ, limb and life at risk. An attitude of urgency and of good judgement, both in diagnostic assessment and the application of evidence-based vascular and endovascular techniques, is crucial to the achievement of optimal outcomes. This book is structured with the emphasis on clinical presentation, the objective being to provide accessible and highly practical advice to the vascular surgeon faced with a particular emergency. Distinguished vascular surgeons, vascular radiologists and other specialists around the world have enriched this book with authoritative contributions reflecting their experience and expertise. For ease of reference the text is divided into nine sections, leading with introductory chapters on general considerations such as pathophysiology, preoperative diagnosis, risk assessment and medico-legal aspects of vascular emergencies. That is followed by a series of clinical sections covering acute cerebrovascular syndromes, acute limb ischaemic states, the acutely swollen limb, thoraco-abdominal catastrophes, acute complications of endovascular aortic repair, regional vascular trauma and iatrogenic injuries. It concludes with a section on miscellaneous, but important, acute vascular challenges. Throughout the book, wherever appropriate, modern endovascular techniques are given full coverage. International in its approach, this book will fast become established as the text devoted to the surgical management of vascular and endovascular emergencies. It is essential reading for vascular surgeons and radiologists and a useful reference source for general and trauma surgeons, angiologists and emergency physicians.

It provides readers with up-to-date diagnostic criteria, classifications, and therapeutic approaches. and recent discoveries on mechanisms of disease, experimental therapeutic agents, and biomarkers of disease. Written by top experts in the field, Microvascular Disease in Diabetes offers in-depth chapters covering pathophysiology; the genetics of diabetic microvascular disease; and the epigenetics of diabetic microvascular disease. It then provides sections featuring both clinical and research information on diabetic retinopathy, diabetic nephropathy, diabetic neuropathy, and diabetic foot. It also looks at coronary microvascular dysfunction and cerebral microvascular disease. Integrates new and accessible material on diabetic microvascular comorbidities Covers all relevant microvascular systems Provides a much-needed resource synthesizing research and clinical applications to treating microvascular complications of diabetes Presents current diagnostic criteria, classifications, and therapeutic approaches, as well as recent discoveries on the mechanisms of disease, experimental therapeutic agents, and biomarkers of disease Assembled in an easily consultable manner, Microvascular Disease in Diabetes is an excellent text for investigators, clinicians, and students looking to improve their understanding of diabetic complications.

Winner of a HIGHLY COMMENDED AWARD in the Surgery category of the 2007 BMA Medical Book Competition. The first edition published in 1999, was described as a "longed for addition to the literature", and as a text that "cannot be compared with any other book on vascular surgery" (Lancet 2000; 355: 1918). At the time it was different; a book to help busy clinicians sift through surgical research and use it to make sensible decisions for their clinical practice. The challenge for this second edition is to produce something better still. The new edition is larger

and more comprehensive, thanks to valuable suggestions from colleagues and reviewers. The text is as accessible as possible, with short chapters, recommendations for management, comprehensive referencing and full colour illustration. It belongs on the shelf, or in the briefcase of everyone who has to treat patients with vascular disease.

Understanding Hospital Billing and Coding - E-Book

Consolidated R&D Annual Project Report

This book is evidence-based and takes into account the modern managed care model in which the current hospitalist practices. The Hospitalist Physician is a relatively new concept within modern healthcare. As this new field evolves, so too will the educational needs of internists who have chosen to practice this discipline. This work is aimed squarely at addressing this need. Internal medicine residency programs in this country strive to equip new grads with a comprehensive set of skills for dealing with both inpatient and outpatient care. However, there remain practice management and workflow nuances that separate the traditional internist from the acute inpatient care physician, or hospitalist. These are the key areas that this work hopes to shed light upon, in addition to highlighting some of the intriguing procedural and critical care elements that hospitalist need to be strong in. It is hoped that this text will enable a physician to respond to the patients' needs in real time, providing a service which was not possible for busy primary care doctors to perform in the recent past. This book will be used as an 'in-the-field' guide for new hospitalists, focusing on two groups of readers: the new graduate from residency and the office-based internist that wishes to retrain and certify as a hospitalist physician. It is a practical text, with an illustrated procedures section, intended for use as a reference for hospital-based procedures. The Hospitalist will serve as a pocket guide for those intending to obtain rapid information on practice management principles unique to a hospitalist physician.

Includes subject section, name section, and 1968-1970, technical reports.

The authors discuss in detail the primary symptom-claudication-an intermittent pain in the leg or foot while walking, its predisposing factors, the current diagnostic methodologies, the impressive advances in the therapeutic armamentarium, and the need to screen for co-existing coronary artery disease. Additional chapters describe cutting-edge noninvasive angiography and vascular flow studies, specific drug therapy for claudication, regression of atherosclerosis therapy, gene therapy, and drug eluting stents for peripheral arterial disease. The authors also examine the epidemiology of LEAD, the effects of smoking and effective smoking cessation programs, its pathogenesis and its association with lipid abnormalities and hypertension, aggressive risk factor modification, and the need to measure the ankle brachial index of every patient over 45.
