Design Thinking Research carried out at Stanford University in Palo Alto, California, USA and Hasso Plattner Institute in Potsdam, Germany. The authors offer readers a closer look at Design Thinking with its processes of innovations and methods. The contents of the articles range from how to design ideas, methods and technologies via creativity experiments and wicked problem solutions, to creative collaboration in the real world and the

connectivity of designers and engineers. But the topics go beyond this in their detailed exploration of design thinking and its use in IT systems engineering fields and even from a management perspective. The authors show how these methods and strategies work in companies, introduce new technologies and their functions and demonstrate how Design Thinking can influence as diverse a topic area as marriage. Furthermore, we see how

special design thinking use functions in solving wicked problems in complex fields. Thinking and creating innovations are basically and inherently human – so is Design Thinking. Due to this, Design Thinking is not only a factual matter or a result of special courses nor of being gifted or trained: it's a way of dealing with our environment and improving techniques, technologies and life.

In Canada, the framework is used by

Since its adoption, the CanMEDS Framework has been updated twice; most recently in 2015. The CanMEDS 2015 Framework has been endorsed by 12 Canadian medical organizations who will work to adapt and integrate CanMEDS for their specific context. What areas has the Framework changed from the previous version (2005)? The addition of complementary milestones is arguably the

largest change between the 2005 and 2015 versions of the CanMEDS 2015 Framework. The milestones will be available in an online companion document, the CanMEDS Milestones Guide, and unlike the Framework they will undergo continual revision as educators modify the milestones for their specific specialty. New themes have been introduced, such as patient safety, quality improvement, handovers, and eHealth. A renewed emphasis on the overall coherence of the framework and on its practical application. Role descriptions and

Oil and gas projects have special characteristics that need a different

technique in project management. The development of any country depends on the development of the energy reserve through investing in oil and gas projects through onshore and offshore exploration, drilling, and increasing facility capacities. Therefore, these projects need a sort of management match with their characteristics, and project management is the main tool to achieving a successful project. Written by a veteran project manager who has specialized in oil and gas projects for years, this book focuses on

handover of a building and its documentation. As a result, many buildings are not being properly handed over on practical completion. When this happens, it is likely that the building will be used inappropriately and inefficiently, leading to the dissatisfaction of its users and wasted energy resources. This Digest describes BRE's proposed new handover protocol called "Handover of Office Buildings Operations" or HOBO. It is innovative because it encourages handover to be seen as a process of many activities with emphasis on information exchange, training, demonstration and fine-tuning.
