"Prescribing Mental Health Medication is a text for nursing and medical practitioners who are learning how to diagnose and treat mental disorders with medication. Skills-based, it focuses on the following key issues: how to start and stop medication, how to dose, when to change medication, dealing with particular kinds of patients, specific illnesses and their medication, special populations and conditions, the management of side effects, practical issues such as monitoring medication with blood levels, administrative issues such as record-keeping." -- Publisher's description.

This searing indictment, David Healy's most comprehensive and forceful argument against the pharmaceuticalization of medicine, tackles problems in health care that are leading to a growing number of deaths and disabilities. Healy, who was the first to draw attention to the now well-publicized suicide-inducing side effects of many anti-depressants, attributes our current state of affairs to three key factors: product rather than process patents on drugs, the classification of certain drugs as prescription-only, and industry-controlled drug trials. These developments have tied the survival of pharmaceutical companies to the development of blockbuster drugs, so that they must overhype benefits and deny real hazards. Healy further explains why these trends have basically ended the possibility of universal health care in the United States and elsewhere around the world. He concludes with

suggestions for reform of our currently corrupted evidence-based medical system.

It is an essential resource for all mental health nursing students, as well as an invaluable reference for practising nurses. This book will help clinicians acquire and develop the processes and skills of values-based practice. The aim of most patient-clinician consultations is to improve health outcomes. Often they succeed, and patients are satisfied and empowered. However, some consultations are unsatisfactory and result in failure to improve health outcomes and dissatisfaction on the part of patients, carers or clinicians. When consultations fail to achieve the desired results, the cause is not usually a failure of evidence-based practice. Today's clinicians are trained in evidence-based medicine, educated, updated and appraised. The most likely reason why things go wrong is a failure of values-based practice - not ascertaining the relevant values perspectives and acting on them in a coherent and purposeful manner. If you rehearse and practise the elements of values-based practice detailed in this book, you will find your consultations more personally rewarding and your patients are likely to derive more benefit. Designing Clinical Research sets the standard for providing a practical guide to planning, tabulating, formulating, and implementing clinical research, with an easy-to-read, uncomplicated presentation. This edition incorporates current research methodology—including molecular and genetic clinical research—and offers an updated syllabus for conducting a clinical research workshop. Emphasis is on common sense as the main ingredient of good science. Written by a seasoned forensic psychiatrist with decades of experience and professional honors, this text answers some of the most challenging questions psychiatrists face when mental health intersects with the courtroom. The text also knits this understanding of forensic psychiatry with clinical knowledge, addressing violence and risk assessment, discrimination, disability evaluation, psychiatric disorders, criminal and civil competence, end-of-life care and decisions, and a wide array of medical topics that have unique concerns when placed in the context of the legal system. ***Mental, neurological, and substance use disorders are common, highly disabling, and associated with significant premature mortality. The impact of these disorders on the social and economic well-being of individuals, families, and societies is large, growing, and underestimated. Despite this burden, these disorders have been systematically neglected, particularly in low- and middle-income countries, with pitifully small contributions to scaling up cost-effective prevention and treatment strategies. Systematically compiling the substantial existing knowledge to address this inequity is the central goal of this volume. This evidence-base can help policy makers in resource-constrained settings as they prioritize programs and interventions to address these disorders.***

***Medical Care, University of Liverpool, UK "Pilgrim and Rogers have for the last twenty years given us the key text in the sociology of mental health and illness. Each edition has captured the multi-layered and ever changing landscape of theory and practice around psychiatry and mental health, providing an essential tool for teachers and researchers, and much loved by students for the dexterity in combining scope and accessibility. This latest volume, with its focus on community mental health, user movements criminal justice and the need for inter-agency working, alongside the more classical sociological critiques around social theories and social inequalities, demonstrates more than ever that sociological perspectives are crucial in the understanding and explanation of mental and emotional healthcare and practice, hence its audience extends across the related disciplines to everyone who is involved in this highly controversial and socially relevant arena." Gillian Bendelow, School of Law Politics and Sociology, University of Sussex, UK "From the classic bedrock studies to contemporary sociological perspectives on the current controversy over which scientific organizations will define diagnosis, Rogers and Pilgrim provide a comprehensive, readable and elegant overview of how social factors shape the onset and response to mental health and mental illness. Their sociological vision embraces historical, professional and socio-cultural context and processes as they shape the lives of those in the community and those who provide care; the organizations mandated to deliver services and those that have ended up becoming unsuitable substitutes; and the successful and unsuccessful efforts to improve the lives through science, challenge and law."
