The papers in this volume relate to the nature and conditions of classroom learning, with particular emphasis on the cognitive aspects. They are concerned with the question of concept formation and stress the importance of the teacher's function in ensuring that the child really has assimilated the ideas and not merely the words for the

This section also provides a context within which subsequent discussions of classroom learning problems can be viewed. Some problems concerning the elaboration of a general theory of teaching are then examined with particular reference to possible methods of

What is the nature of the modern state? How did it come into being and what are the characteristics of this distinctive field of power that has come to play such a central role in the shaping of all spheres of social,

Acces PDF Psykologi I Sundhedsfag En Grundbog

political and economic life? In this major work the great sociologist Pierre Bourdieu addresses these fundamental questions. Modifying Max Weber's famous definition, Bourdieu defines the state in terms of the monopoly of legitimate physical and symbolic violence, where the monopoly of symbolic violence is the condition for the possession and exercise of physical violence. The state can be reduced

Acces PDF Psykologi I Sundhedsfag En Grundbog

neither to an apparatus of power in the service of dominant groups nor to a neutral site where conflicting interests are played out: rather, it constitutes the form of collective belief that structures the whole of social life. The 'collective fiction' of the state is a fiction with very real effects - is at the same time the product of all struggles between different interests, what is at stake in these struggles, and their

Acces PDF Psykologi I Sundhedsfag En Grundbog

very foundation. While the question of the state runs through the whole of Bourdieu's work, it was never the subject of a book designed to offer a unified theory. The lecture course presented here, to which Bourdieu devoted three years of his teaching at the Collège de France, fills this gap and provides the key that brings together the whole of his research in this field. This text also shows 'another

Bourdieu', both more concrete and more pedagogic in that he presents his thinking in the process of its development. While revealing the illusions of 'state thought' designed to maintain belief in government being oriented in principle to the common good, he shows himself equally critical of an 'anti-institutional mood' that is all too ready to reduce the construction of the bureaucratic apparatus

to the function of maintaining social order. At a time when financial crisis is facilitating the hasty dismantling of public services, with little regard for any notion of popular sovereignty, this book offers the critical instruments needed for a more lucid understanding of the wellsprings of domination.

Brinkmann shows how everyday life materials such as books, television, the internet, the media and everyday conversations and interactions can help us to understand larger social issues. As living human beings in cultural worlds, we are constantly surrounded by 'data' that call for analysis, and as we cope with the different situations and episodes of our lives, we are engaged in understanding and interpreting the

world as a form of qualitative inquiry. The book helps its reader develop a disciplined and analytic awareness informed by theory, and shows how less can be more in qualitative research. Each chapter introduces theoretical tools to think with, and demonstrates how they can be put to use in working concretely with everyday life materials.

A discussion of effective teaching covers such topics as teacher expectations, student motivation, classroom management, and adapting instruction for individual learners.

'Changing the Course of Autism' has the potential to revolutionise the way autism is perceived and managed. This groundbreaking books shows that the disease can be treated by reducing the

The authors have seen autistic behaviours improve dramatically or disappear completely with appropriate medical treatment. In 2001, the second son of Jepson was diagnosed with autism. This book offers a novel approach to thinking about public policy and a distinctive methodology for analysing policy. It introduces a set of six questions that probe how 'problems' are represented in policies, followed by an injunction to apply the questions to one's own policy proposals. This form of analysis, it suggests, is crucial to understanding how policy works, how we are governed, and how the practice of policy-making implicitly constitutes us as subjects. The book mounts a challenge to the problem-solving

paradigm currently dominating the intellectual and policy landscape, a paradigm manifest in ‘evidence-based policy’. Arguing that such a paradigm denies the shaping that goes on in the process of problematisation, it offers a ‘what’s the problem represented to be?’ approach to policy analysis as a counter-discourse. In this view critical thinking involves putting ‘problems’ into question rather than learning how to ‘solve’ them. Bacchi’s approach to policy analysis offers exciting insights in a wide array of policy areas, including welfare, drugs/alcohol and gambling, criminal justice, health, education, immigration and population, media and research policy. Invaluable to those involved in policy studies and public administration, it will also

This palimpsest of mourning enables Naja to turn over the pathetic, precious transience of existence and articulates her greatest fear: to forget. In a sense this is the opposite of the question from which work on motivation began, and for which Claude Bernard invented the concept of the fixity of the internal milieu: How does an animal maintain constancy in the face of a fluctuating environment? Dealing with motivation has become extremely complex as new experiments, phenomena, and theories have extended the concept. This book embodies some of the ways in which work on motivation is currently proceeding. One of the major changes has been the

recognition that motivation cannot be explained without an understanding of the biological rhythms and activational systems that underlie behavior. Another is that ecological and evolutionary perspectives add enormously to answering the central problem of why an animal does what it does when it does. The book suffers from several omissions. There is no chapter on the development of motivated behavior. There is none on reward systems in the brain, owing to the untimely death of James Olds, whose contribution would have enriched this book appreciably, and to whom we dedicate it. EVELYN SATINOFF

Discussions about the nature of the emotions in Hellenistic philosophy have aroused intense scholarly interest over the last few years. The topics covered by the essays in this volume range from the classical background of Hellenistic theories, through debates on emotion in the major Hellenistic schools, to discussions in later antiquity. Special emphasis is placed on the development of the Stoic views on the nature and value of the emotions. The essays are written with a high level of philosophical and classical scholarship, but contain no exclusive technicalities. Audience: This first comprehensive treatment of the emotions in Hellenistic philosophy can be read with pleasure and

When children were asked, "What is the worst thing about being in a kindergarten?" the unanimous answer was: "To be scolded by the adults!" No one, including adults, enjoys being scolded by other people; it is both painful and humiliating. And yet scolding is regarded as something natural, and even inevitable, in the everyday life of young children. Why is this so? In his landmark study, originally published in Danish, Erik Sigsgaard took up the issue to wide acclaim and enthusiastic reviews. Translated here for the first time, Scolding:

Acces PDF Psikologi I Sundhedsfag En Grundbog

Why It Hurts More Than It Helps is as relevant to U.S. childcare policy and practice as it is to Danish. This book is a powerful reminder that when it comes to dealing with children, scolding hurts much more than it helps. Sigsgaard brings scolding into sharp focus, reviewing existing research on the subject, including an important study of childcare across the United States, Denmark, China, and Japan, and presenting scolding in historical perspective. Featuring sometimes poignant, sometimes funny interviews with children and adults in preschool programs and schools, this book looks at how children are affected by frequent and severe scolding, in the short and in the long term, and which

children are scolded the most. It presents alternatives to scolding, including suggestions for how children and adults can treat each other in everyday life to avoid scolding.

Living and Dying at Murray Manor is a classic text that documents how the "work" of everyday life in a nursing home is accomplished. Jaber F. Gubrium spent several months at a nursing home as a participant-observer, involved in activities ranging from performing menial "toileting" work to serving as a gerontologist at staff meetings. The result is not a survey of statistics about nursing homes but an examination of the social organization of

care in a single home the author calls Murray Manor. Gubrium's research reveals how staff, clientele, relatives, visiting physicians, and funeral directors negotiated their respective roles, needs, and goals- and how, in the end, Murray Manor emerged as an organized social entity.
