The Z notation has been developed at the Programming Research Group at the Oxford University Computing Laboratory and elsewhere for over a decade. It is now used by industry as part of software (and hardware) development process in both Europe and the USA. It is currently undergoing BSI standardisation in the UK, and has been proposed for ISO standardisation internationally. In recent years researchers have begun to focus increasingly on the development of techniques and tools to encourage the wider application of Z and other formal methods and notations. This volume contains papers from the Seventh Annual Z User Meeting, held in London in December 1992. In contrast to previous years the meeting concentrated specifically on industrial applications of Z, and a high proportion of the participants came from an industrial background. The theme is well represented by the four invited papers. Three of these discuss in which formal methods are being introduced, and the fourth presents an international survey of industrial applications. It also provides a reminder of the improvements which are needed to make these methods an accepted part of software development. In addition the volume contains several submitted papers on the industrial use of Z, two of which discuss the key area of safety-critical applications. There are also a number of papers related to the recently-completed ZIP project. The papers cover all the main areas of the project including methods, tools, and the development of a Z Standard, the first publicly-available version of which was made available at the meeting. Finally the volume contains a select Z bibliography, and a section on how to access information through `comp.specification.z`, the international, computer-based USENET newsgroup. Z User Workshop, London 1992 provides an important overview of current research into industrial

applications of Z, and will provide invaluable reading for researchers, postgraduate students and also potential industrial users of Z.

This book highlights in a most condensed form judicial pronouncements by the superior courts of records as they relate to practice and procedures in civil litigation in Nigeria. Judicial pronouncements on civil aspects of the law in Nigeria are on the increase, rendering brief-writing more challenging, if not herculean, in the absence of a resource guide for the citation of authorities and knowing which changes have taken place in the law. For lawyers not to be taken by surprise in courts when issues relating to practice and procedures are raised without notice, makes the need to have a resource book that

should serve as a quick guide the more compelling. This book is thus intended to be a reference guide.

The Hydrologic Engineering Center (HE) is developing next generation software for one-dimensional river hydraulics. The HEC-RAS River Analysis System is intended to be the successor to the current steady-flow HEC-2 Water Surface Profiles Program as well as provide unsteady flow, sediment transport, and hydraulic design capabilities in the future. A common data representation of a river network is used by

all modeling methods, thus allowing the user to more easily migrate from steady-flow model with several significant advances over HEC-2. An overview of the Version 1 program package and some of the improved hydraulic features are presented.

"TRB's National Cooperative Highway Research Program (NCHRP) Report 545: Analytical Tools for Asset Management examines two tools developed to support tradeoff analysis for transportation asset management. The software tools and the accompanying documentation are designed to help state departments of transportation and other transportation agencies identify, evaluate, and recommend investment decisions for managing the agency's infrastructure assets"--Publisher's description.

This serious yet lively book offers an intensely practical account of the way Twelfth Night actually works on stage. Drawing both on his inside knowledge as a director of the play and on his lifelong experience as a Shakespearian actor, Pennington takes the reader through Twelfth Night scene by detailed scene. 'He is sharply intelligent, scrupulously careful, hugely knowledgeable and above all, wonderfully readable' Peter Holland, The Shakespeare Institute

Students often experience assessment courses, and subsequently the textbooks used for the course, as a statistics-heavy class accompanied by an encyclopedia of a variety of assessments. Assessment in Counseling alternatively emphasizes the skills used in assessment, thereby enabling students to apply these skills across a broad range of assessment instruments and strategies. Assessment, like most core areas of counseling, has a theoretical basis and a pertinent, practical component. However, this practical component often gets lost in the application of the skills and use of instruments that heavily rely on psychometric properties. Written in an accessible, conversational tone, this text focuses on the application of the theoretical and measurement concepts of assessment in counseling and introduces three case studies that are followed throughout the text. Additionally, instead of introducing readers to a plethora of instruments, the authors select seminal measures that students are likely to approach and use in the profession. Through the use of this text and course content, one will acquire the skills to search, select, and administer the type of assessment instruments that he/she deems helpful for their practice as a professional counselor, regardless of specialization.

Ultimately, this textbook serves as an invaluable guide for administering, scoring, interpreting, and communicating assessment results.
