National Physical Therapist Assistant

This women's history classic brilliantly exposed the constraints imposed on women in the name of science and exposes the myths used to control them. Since the the nineteenth century, professionals have been invoking scientific expertise to prescribe what women should do for their own good. Among the experts' diagnoses and remedies: menstruation was an illness requiring seclusion; pregnancy, a disabling condition; and higher education, a threat to long-term health of the uterus. From clitoridectomies to tame women's behavior in the nineteenth century to the censure of a generation of mothers as castrators in the 1950s, doctors have not hesitated to intervene in women's sexual, emotional, and maternal lives. Even domesticity, the most popular prescription for a safe environment for woman, spawned legions of "scientific" experts. Barbara Ehrenreich and Dierdre English has never lost faith in science itself, butinsist that we hold those who interpret it to higher standards. Women are entering the medical and scientific professions in greater numbers but as recent research shows, experts continue to use pseudoscience to tell women how to live. For Her Own Good provides today's readers with an indispensable dose of informed skepticism.

As humanitarian aid organizations have evolved, there is a growing recognition that incorporating palliative care into aid efforts is an essential part of providing the best care possible. A Field Manual for Palliative Care in Humanitarian Crises represents the first-ever effort at educating and providing guidance for clinicians not formally trained in palliative care in how to incorporate its principles in their work in crisis situations. Written by a team of international experts, this pocket-sized manual identifies the needs of people affected by natural hazards, political or ethnic conflict, epidemics of life-threatening infections, and other humanitarian crises. Later chapters explore topics including pain management, skin conditions, non-communicable diseases, palliative care emergencies, the law and ethics of end of life care, and more. Concise and highly accessible, this manual is an ideal educational tool pre-deployment or during fieldwork for clinicians involved in planning and providing humanitarian aid, local care providers, and medical trainees.
