In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status

across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or

Managing winners and losers will be the single largest challenge for India ' s energy policy. Coal is entrenched in a complex ecosystem. In some states, it ' s amongst the largest contributors to state budgets. The Indian Railways, India ' s largest civilian

employer, is afloat because it overcharges coal to offset under-recovery from passengers. Coal India Limited, the public sector miner that produces 85% of domestic coal, is the world ' s largest coal miner. But despite enormous

reserves, India imports about a quarter of consumption. On the flip side, coal faces inevitable pressure from renewable energy, which is the cheapest option for new builds.

However, there is significant coal-

consumption means  
India must still grow  
its energy supply.  
Before India can  
phase out coal, it  
must first achieve a

plateau of coal. How this happens cost-effectively and with least resistance isn't just a technical or economic question, it depends on the political economy of coal and its alternatives. Some stakeholders want to kill coal. A wiser option may be to
