Today's economy is fueled by knowledge. Every leader knows this to be true, yet few have systematic methods for converting organizational knowledge into economic value. This book argues that communities of practice—groups of individuals formed around common interests and expertise—provide the ideal vehicle for driving knowledge–management strategies and building lasting competitive advantage. Written by leading experts in the field, *Cultivating Communities of Practice* is the first book to outline models and methods for systematically developing these essential groups. Through compelling research and company examples, including DaimlerChrysler, McKinsey & Company, Shell, and the World Bank, authors Etienne Wenger, Richard McDermott, and William M. Snyder show how world–class organizations have leveraged communities of practice to drive strategy, generate new business opportunities, solve problems, transfer best practices, develop employees' professional skills, and recruit and retain top talent. Underscoring the new central role communities of practice are playing in today's knowledge economy, *Cultivating Communities of Practice* is the definitive guide to fostering, designing, and developing these powerful groups within and across organizations.

Can scholars generate knowledge and pedagogies that bolster local and global forms of resistance to U.S. imperialism, racial/gender oppression, and the economic violence of capitalist globalization? This book explores what happens when scholars create active engagements between the academy and communities of resistance. In so doing, it suggests a new direction for antiracist and feminist scholarship, rejecting models of academic radicalism that remain unaccountable to grassroots social movements. The authors explore the community and the academy as interlinked sites of struggle. This book provides models and the opportunity for critical reflection for students and faculty as they struggle to align their commitments to social justice with their roles in the academy. At the same time, they explore the tensions and challenges of engaging in such contested work.

Wheeler's Dental Anatomy, Physiology, and Occlusion

In a crucial shift within posthumanistic media studies, Bernhard Siegert dissolves the concept of media into a network of operations that reproduce, displace, process, and reflect the distinctions fundamental for a given culture. Cultural Techniques aims to forget our traditional understanding of media so as to redefine the concept through something more fundamental than the empiricist study of a medium's individual or collective uses or of its cultural semantics or aesthetics. Rather, Siegert seeks to relocate media and culture on a level where the distinctions between object and performance, matter and form, human and nonhuman, sign and channel, the symbolic and the real are still in the process of becoming. The result is to turn ontology into a domain of all that is meant in German by the word Kultur. Cultural techniques comprise not only self-referential symbolic practices like reading, writing, counting, or image-making. The analysis of artifacts as cultural techniques emphasizes their ontological status as "in-betweens," shifting from firstorder to second-order techniques, from the technical to the artistic, from object to sign, from the natural to the cultural, from the operational to the representational. Cultural Techniques ranges from seafaring, drafting, and eating to the production of the sign-signal distinction in old and new media, to the reproduction of anthropological difference, to the study of trompe-l'oeils, grids, registers, and doors. Throughout, Siegert addresses fundamental questions of how ontological distinctions can be replaced by chains of operations that process those alleged ontological distinctions within the ontic. Grounding posthumanist theory both historically and technically, this book opens up a crucial dialogue between new German media theory and American postcybernetic discourses.

"Sarah Hirschman's book is ... really a manifesto for an approach to education that does all these more human, more important things." -Danielle Allen, Professor, Institute for Advanced Study, Princeton, New Jersey "I'd love to see People and Stories programs for the parents of children in every at-risk school district in the country." -Robert Hass, US Poet Laureate, 1995-1997 People and Stories / Gente y Cuentos describes how men and women on welfare or in rehabilitation centers, prisoners, rural workers, disadvantaged youth, or just ordinary community members are offered the chance to experience literature in a way they have not been able to in the past. Founded by Sarah Hirschman, People and Stories / Gente y Cuentos encompasses groups of common, often under-served adults in the United States, France, and Colombia who enjoy reading and discussing works of literature. Upon attending a seminar with the philosopher, Paulo Freire, and working with groups in New York's Lower East Side and Dorchester, Massachusetts, she created Gente y Cuentos in Spanish. Some years later, the English-language People and Stories program was added. Currently, Gens et Recits in French is being developed in Paris and in the southwest of France. This book describes the various influences that led to the development of this method. The clarity of the explanations and the attention to detail should help those who want to organize similar discussion groups in their own communities."

The Handbook of Technology and Second Language Teaching and Learning presents a comprehensive exploration of the impact of technology on the field of second language learning. The rapidly evolving language-technology interface has propelled dramatic changes in, and increased opportunities for, second language teaching and learning. Its influence has been felt no less keenly in the approaches and methods of assessing learners' language and researching language teaching and learning. Contributions from a team of international scholars make up the Handbook consisting of four parts: language teaching and learning through technology; the technology-pedagogy interface; technology for L2 assessment; and research and development of technology for language learning. It considers how technology assists in all areas of language development, the emergence of pedagogy at the intersection of language and technology, technology in language assessment, and major research issues in research and development of technologies for language learning. It covers all aspects of language including grammar, vocabulary, reading, writing, listening, speaking, pragmatics, and intercultural learning, as well as new pedagogical and assessment approaches, and new ways of conceiving and conducting research and development. The Handbook of Technology and Second Language Teaching and Learning demonstrates the extensive, multifaceted implications of technology for language teachers, learners, materials-developers, and researchers.
