Theoretically rich and stimulating, Critical Issues in Qualitative Research Methods targets matters inherent in qualitative research. It addresses some of the lesser-known or explicated qualitative research methods (such as ethnology), the essential concepts of rigor and evaluation, dilemmas in data collection, and issues of scientific misconduct. The various schools of phenomenology and their major characteristics of excellence are described. In addition, ethical issues and concerns of scientific integrity are raised: Which set of ethics should a researcher use? Should one divulge their research purposes? Are there potential risks to informants? Each chapter in this volume deals with a matter that has not yet been resolved or addressed in existing literature. The chapters begin with a joint dialogue in which the contributors raise questions and comment upon the concept presented, thus giving a sense of the ongoing controversy these opinions engender. Critical Issues in Qualitative Research Methods is important reading for advanced students and researchers in all disciplines, especially nursing and allied health.

This title provides step-by-step directions for how to conduct a meta-study, as well as recommendations for tools and standards for the application of this approach.

"Reporting standards are guidelines that describe how to communicate findings clearly in journal articles so that readers can access and understand the story of the research endeavor. Recognizing that reporting standards can aid authors in the process of writing and evaluating manuscripts and editors and reviewers in the process of evaluating those manuscripts, the Publications and Communications (P&C) Board of the American Psychological Association (APA) invited two task forces of researchers to develop standards for reporting quantitative and qualitative research in journal articles. The Quantitative Journal Article Reporting Standards Working Group developed standards for quantitative research, and a separate book details those standards. This book discusses the reporting standards. It permits the space to expand on the ideas in those standards and to articulate the rationale behind each. It articulates decisions one may need to make as an author as one decides how to present their work. It also provides examples to illustrate a strong presentation style, and these can serve as helpful models. It provides the conceptual undergirding for the reporting decisions that authors make during the writing process. The book considers the typical sections of a qualitative research paper?The introductory sections, Method, Results, and Discussion. Guidance is provided for how to best present qualitative research, with rationales and illustrations. The book presents reporting standards for qualitative meta-analyses, which are integrative analyses of findings from across primary qualitative research. The book includes a discussion of objectivist and constructivist rhetorical styles in research reporting."''--Preface. (PsycINFO Database Record (c) 2020 APA, all rights reserved).

What are the fundamental elements of good quantitative and qualitative research? What are the strengths and weaknesses of each approach? What does research offer early childhood education? Are quantitative and qualitative approaches compatible? This book presents the research process and its components in a straightforward, easily accessible manner. Using real examples from early childhood education, authors William L. Goodwin and Laura D. Goodwin "bring to life" for the first time the various methods of research and how they may be studied and applied. They explore the major aspects of both quantitative and qualitative paradigms and techniques, stressing the compatibility and complementary nature of the two approaches that are so often seen as mutually exclusive if not downright contradictory.
