1. J. H. Pratt, his wife, and Mrs. Phoebe Smith, all then of Kansas, having heard of one Aber, of Kansas, as being a medium for the phenomena of spirit materializations, succeeded in securing the services of this said medium for that capacity, commencing the seances in September, 1888, at the residence of the J. H. Pratt, where the Mr. Aber thenceforth held his home, holding seances there almost daily, to June, 1890.2. The phenomena presented at these seances were what are called "bust shadowy forms" shown at the cabinet window.3. At these seances the public were invited, and many attended; but, for want of more information as to the nature of the phenomena, but few pursued their investigations to a definite conclusion.4. Some persons, however, saw, from close and careful attention, that the medium did not, in any fraudulent manner, have anything to do with the production of the phenomena, neither as the principal nor by mortal confederate.5. Some of the "bust shadowy forms" shown at these seances were enabled to write, and talk in a whisper, and could both talk and write in "tongues" beyond the knowledge of the medium and of any person in the circle.6. These forms began to talk and write, to furnish, through full-form visible materializations, matter for a book, and urged that a circle be organized for the purpose of giving the spirit world an opportunity under conditions to that end.

The three pieces in Idaho Gems capture the spirit of this northwestern state. "White Pine Waltz" begins with a delicate melody in 3/4 meter inspired by the majestic western white pine, Idaho's state tree. The piece builds to a climactic middle section featuring flowing arpeggios in both hands before subsiding into a restatement of the theme. The second piece, "Craters of the Moon," paints a picture of the volcanic landscapes found in the national preserve of the same name. A repetitive chromatic figure in the lower register is combined with dissonant intervals in the upper register to capture the eerie otherworldliness of the park's lava fields. In "Snake

River Rag," chromatic passages wind their way across the keyboard, inspired by the Snake River's twisted path through the Idaho countryside. "Western Gem" provides a dynamic conclusion to the suite. The piece makes full use of the keyboard with block chords and scalar passages in both hands, while a modulation in the middle section provides an additional musical challenge.

Now in its eighth edition, *The Moral of the Story* continues to bring understanding to difficult concepts in moral philosophy through storytelling and story analysis. From discussions on Aristotle's virtues and vices to the moral complexities of the *Game of Thrones* series, Rosenstand's work is lively and relatable, providing examples from contemporary film, fiction narratives, and even popular comic strips. What you eat and drink can affect the way your medicines work. Use this guide to alert you to possible "food-drug interactions" and to help you learn what you can do to prevent them. In this guide, a food-drug interaction is a change in how a medicine works caused by food, caffeine, or alcohol. A food-drug interaction can: prevent a medicine from working the way it should cause a side effect from a medicine to get worse or better cause a new side effect A medicine can also change the way your body uses a food. Any of these changes can be harmful. This guide covers interactions between some common prescription and over-the counter medicines and food, caffeine, and alcohol. These interactions come from medicine labels that FDA has approved. This guide uses the generic names of medicines, never brand names.

Since its introduction 52 years ago, Leksell radiosurgery has become a widely applied technique for the management of a diverse group of vascular, neoplastic, and functional disorders. This publication presents an update on state-of-the-art radiosurgery technology, including outcomes, by the pioneers in the field. Experts have contributed chapters on various topics. They provide a history of the development of Leksell Gamma Knife and its evolution from frame-based to the inclusion of mask-based radiosurgery in the latest Gamma Knife model. For beginners, there is valuable information related to imaging, quality assurance, patient care, anesthesia, and regulatory requirements. Advance users will appreciate the summary of the

long-term outcome of important indications. Additional chapters on cavernous malformation, orbital, uveal, and ocular disorders clarify the role of radiosurgery. This book is a concise overview for physicians interested in radiosurgery. It will be of great value to neurosurgeons, radiation oncologists, and medical physicists concerned with learning about the indications of radiosurgery.

This new edition of White Coat Tales presents intriguing stories that give historical context to what we do in medicine today—the body’s “holy bone” and how it got its name, a surprising reason why gout seemed to be so prevalent several centuries ago, and the therapeutic misadventure that shortened the life of Eleanor Roosevelt. In addition to many new tales, this revised edition contains 128 illustrations, such as images of Baron von M ünchhausen aloft with cannonballs and Vincent van Gogh’s portrait of his doctor showing a clue to the painter’s health. Read about legendary medical innovators, diseases that changed history, illnesses of famous persons, and some epic blunders of physicians and scientists. The author is Robert B. Taylor, MD, Emeritus Professor, Oregon Health & Science University School of Medicine, and Professor, Eastern Virginia Medical School. Dr. Taylor is the author and editor of more than 33 medical books. To see Dr. Taylor lecture on the history of medicine, go here: <https://youtu.be/Zx4yaUyaPRA>

The Newnes Circuits Series provides designers with quick reference guides to various types of circuits, and is written by a professional technical writer. Each book comes with 250-300 ready-to-use designs, with schematics and explanations.

Wild plots and quicksilver wit characterize the plays of Georges Feydeau. Called the greatest master of French comedy since Moliere by admirers such as Kenneth Tynan, Feydeau reflects the lusty tradition of the French bedroom farce as well as the tough exorbitant humor later to find full expression in the theater of the absurd. The plays offered in this volume represent the major stages of Feydeau's career. The one-act *Wood and Viewed* was his first comedy, written in 1880. On the *Marry-go-Wrong* shows Feydeau on the way to becoming a master of mad imbroglia, a talent that he demonstrates in *Not by Bed Alone*. *Going to Pot* is a one-act play of conjugal strife of the emotional intensity that marked his work toward the end of his career.

This Classic edition includes a new appendix which summarizes the major developments since the book was originally published in 1974. The additions are organized in short sections associated with each chapter. An additional 230 references have been added, bringing the bibliography to over 400 entries. Appendix C has been edited to reflect changes in the associated software package and software distribution method.

The previously untold story of the Zenith Trans-Oceanic, the world's most romantic and expensive series of portable radios. Long a companion of kings, presidents, transoceanic yachtsmen and world explorers, the Trans-Oceanic was also carried into battle by American troops in three wars. Its great popularity in spite of a very high price can be laid at the feet of several generations of armchair travelers who used the shortwave capabilities of the Trans-Oceanic as a window on the world. With access to the Zenith corporate archives and their long experience as radio enthusiasts and writers for both the popular and scholarly press, Professors Bryant and Cones present the engrossing stories of the development and use of the

Trans-Oceanic throughout its forty year life. They present a wealth of never-before published photographs, documents and information concerning these fascinating radios, their collection, preservation and restoration.

Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown,

and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, or lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.

The Moral of the Story: An Introduction to Ethics

The mission of the National Institute of Standards and Technology (NIST) enables NIST to provide broad support for the advancement of U.S. manufacturing. Research and services

supporting manufacturing are intended to be an important component in all of the NIST laboratories. Moreover, since manufacturing is a major part of the U.S. economy, the growth or loss of U.S. manufacturing jobs is a very important issue. Clearly, the successful execution of NIST's programs supporting manufacturing will have a significant impact on manufacturing jobs in the United States. With the multidisciplinary, multisector, and crosscutting nature of manufacturing, the Director of NIST requested that the National Research Council (NRC) assess the manufacturing-related programs at NIST in 2012. Accordingly, a panel of experts was convened by the National Research Council to perform the assessment. The Panel on review of the Manufacturing-Related Programs at the national Institute of Standards and Technology visited the NIST campus in Gaithersburg, Maryland, on March 26-28, 2012. A Review of the Manufacturing-related Programs at the National Institute of Standards and Technology: Fiscal Year 2012 contains the results of the panel's assessment. The assessment considered manufacturing research at NIST broadly, with emphasis on the specific advanced manufacturing areas: Nanomanufacturing (including Flexible Electronics); Smart Manufacturing (including Robotics); and Next-Generation Materials Measurements, Modeling, and Simulation. The area of Biomanufacturing also reviewed as a subset of the Nanomanufacturing review. As is to be expected for programs covering such wide scope, the boundaries among these broad areas are not rigid and there is some overlap among them. On the basis of its assessment, the panel formed the observations and recommendations which are detailed in this report.

"...profoundly moving..." -Publishers Weekly Nelson Mandela's two great-grandchildren ask their grandmother, Mandela's youngest daughter, 15 questions about their grandad - the global icon of peace and forgiveness who spent 27 years in prison. They learn that he was a freedom fighter who put down his weapons for the sake of peace, and who then became the President of South Africa and a Nobel Peace Prize-winner, and realise that they can continue his legacy in the world today. Seen through a child's perspective, and authored jointly by Nelson Mandela's great-grandchildren and daughter, this amazing story is told as never before to celebrate what would have been Nelson's Mandela 100th

birthday.

Written by leading authorities in the field of spine care, this book is a comprehensive reference for the latest techniques for managing intervertebral disc disorders affecting the lumbar spine. Divided into four main sections, the book opens with a review of fundamental basic science concepts, including epidemiology, anatomy, pathophysiology, biology, biomechanics, and mechanisms of pain. The second section focuses on the management of disc herniation, with chapters guiding clinicians from the pathophysiology of the herniated disc to clinical presentation to various treatment strategies. The final sections of the book present in-depth coverage of degenerative disc disease and provide essential information for imaging and testing, diagnosis, patient screening, treatment, and rehabilitation. Highlights: Detailed coverage of the latest innovations in the field, including nonsurgical treatments, minimally invasive procedures, biologic techniques, and motion-preserving procedures, enables clinicians to select the appropriate treatment for each clinical situation More than 200 high-quality illustrations and images demonstrate key concepts Valuable discussion of safety considerations and how to avoid and manage potential complications Ideal for practitioners and trainees with a focus on spinal disorders, this book will be an invaluable resource for orthopaedists, neurosurgeons, pain specialists, physiatrists, neuroradiologists, and researchers in these specialties.
