Report

Investigation of "preselected Winners" Sweepstakes Promotions

In 1968 a team of scientists and engineers from RCA announced the creation of a new form of electronic display that relied upon an obscure set of materials known as liquid crystals. At a time when televisions utilized bulky cathode ray tubes to produce an

image, these researchers demonstrated how liquid crystals could electronically control the passage of light. One day, they predicted, liquid crystal displays would find a home in clocks, calculators—and maybe even a television that could hang on the wall. Half a century later, RCA's dreams have become a reality, and liquid crystals are the basis of a multibillion-dollar global industry. Yet the company responsible for producing the first LCDs was unable to capitalize upon its invention. In *The TVs of Tomorrow*, Benjamin Gross explains this contradiction by examining the history of flat-panel display research at RCA from the perspective of the chemists, physicists, electrical engineers, and technicians at the company's central laboratory in Princeton, New Jersey. Drawing upon laboratory notebooks, internal reports, and interviews with key participants, Gross reconstructs the development of the LCD and situates it alongside other efforts to create a thin, lightweight replacement for the television picture tube. He shows how RCA researchers mobilized their technical expertise to secure support for their projects. He also highlights the challenges associated with the commercialization of liquid crystals at RCA and Optel—the RCA spin-off that ultimately manufactured the first LCD wristwatch. *The TVs of Tomorrow* is a detailed portrait of American innovation during the Cold War, which confirms that success in the electronics industry hinges upon input from both the laboratory and the boardroom.

Facets of the Fifties. A reference guide to an iconic Decade of Movie Palaces, Television, Classic Cars, Sports, Department Stores, Trains, Music, Food,

For the few hundred television viewers in 1946, a special treat on the broadcast schedule was the variety show called Hour Glass. It was the first TV program to go beyond talking heads, cooking demonstrations, and sporting events, featuring instead dancers, comics, singers, and long commercials for its sponsor, Chase and Sanborn coffee. Within two years, another variety show, Texaco Star Theatre, became the first true television hit and would be credited with the sales of thousands of television sets. The variety show formula was a staple of television in its first 30 years, in part because it lent itself to a medium where everything had to be live and preferably inside a studio. Most of the early television stars—including Jackie Gleason, Milton Berle, Sid Caesar, Ed Sullivan, Red Skelton, Dinah Shore, and Arthur Godfrey—rose to prominence through weekly variety shows. In the 1960s, major stars such as Jerry Lewis, Dean Martin, Judy Garland and Danny Kaye were hosting variety shows. By the 1970s, the format was giving way to sitcoms and dramas, but pop music stars Sonny and Cher, Tony Orlando and Dawn, and Donny and Marie Osmond hosted some of the last of the species. This book details 57 variety shows from the 1940s through the 1990s. A history of each show is first provided, followed by a brief look at each episode. Air date, guest stars, sketches performed, and a listing of songs featured are included.
