The shocking and affecting memoir from a gold-star widow searching for the truth behind her Green Beret husband's death, this book bears witness to the true sacrifices made by military families. When Green Beret Bryan Black was killed in an ambush in Niger in 2017, his wife Michelle saw her worst nightmare become a reality. She was left alone with her grief and with two young sons to raise. But what followed Bryan's death was an even more difficult journey for the young widow. After receiving very few details about the attack that took her husband's life, it was up to Michelle to find answers. It became her mission to learn the truth about that day in Niger--and Sacrifice is the result of that mission. In this heartbreaking and revelatory memoir, Michelle uses exclusive interviews with the survivors of her husband's unit, research into the military leadership and accountability, and her own unique vantage point as a gold-star widow to tell a previously unknown story. Sacrifice is both an honest, emotional look inside a military marriage and a searing investigation of the people and decisions at the heart of the US military.

While much of the transportation systems in Europe and the United States are mature (if not senescent), the rest of the world is still planning, developing, and deploying new systems. The accomplishments and mistakes of places like the United Kingdom and the United States, then, can teach us lessons that may be applied to places where transportation remains nascent or adolescent. The Transportation Experience seeks to understand the genesis of transportation policy in America and the UK, along with the roles that this policy plays as systems are innovated, deployed, and reach maturity, and how policies might be improved.

This book shows the reader how to write a system engineering management plan (SEMP) that reflects the company's identity and is appropriate to most customers' requirements, e.g., MIL-STD-499, ISO 9001, the U.S. Air Force Integrated Management System, and EIA STD 632. The first section of this book provides a brief introduction to the process of developing a SEMP. The remainder contains a source model of a SEMP that is generic in nature. A computer disk is included with the book to provide the SEMP in a form (Microsoft Word) that can be used for the reader's own plan.

The Corps of Royal Electrical and Mechanical Engineers (REME) provides the Army's integral repair and recovery capability. Its soldiers are deployed at the front line and have to be capable of switching instantly from a technical role to fighting alongside those they support, as their many awards for gallantry demonstrate. This, the third volume of REME's distinguished history covers the period from post-Cold War drawdown to the end of UK combat operations in Afghanistan, during which time REME was continuously involved in operations. The narrative knits together personal accounts of front line experiences with an explanation of the political and military background, with a particular focus on equipment support issues. It explains how REME operates and deals with broader issues related to the procurement and support of equipment, and the changing organizations delivering these vital services, within which members of REME have frequently played key enabling roles. *Deconstructing Dads* is an interdisciplinary collection that examines the changing images of fathers in the United States. In this collection, prominent scholars explore a variety of media, including ads, magazines, television, and film to provide historical and current examples of shifts from the bumbling dad to new types of participatory fathers, questioning just how revolutionary these new images are for families.

The Army Chaplaincy

Married with two children, Michael Patrick Fitzmaurice, Major, Infantry, US Army Reserve, is going to war. Bound for Ramstein, Germany, he and his troops, who never expected to be on the frontline, must now stand in battle alongside their active-duty counterparts. It's the mid-1980s and the United States is under the leadership of a new president who continues its post-Vietnam withdrawal from the world stage. Domestic affairs are the administration's priority, while international affairs are given short shrift. In Western Europe, this disengagement of the United States causes turmoil and indecision. The Soviet General Staff observes these conditions and sees an opportunity in the West's disarray. They believe one strong, overwhelming offense, launched violently and without warning, would

overcome NATO's defenses before the alliance could react. Once the Soviet forces seized their objectives in West Germany and the Netherlands, NATO would be forced to sue for peace on Soviet terms. Even if the United States could react to the offensive, its support would never reach the battlefield in time to affect the outcome. And, once the Soviet forces held their ground, the demoralized people of Western Europe would never rally for a counter attack. To meet this threat and support its allies, the United States mobilizes large numbers of reservists and National Guard troops—women and men like Mike who fight to defeat the Soviet onslaught and repel the invaders. This novel was named a finalist in the Eric Hoffer Book Awards recently.

In *Living and Surviving in Harm's Way*, experts investigate the psychological impact of how warriors live and survive in combat duty. They address the combat preparation of servicemen and women, their support systems, and their interpersonal and intrapersonal experiences. The text maintains a focus on cognitive-behavioral interventions for treating various combat-related disorders, and addresses psychological health and adjustment after leaving the battlefield. The text is logically organized for easy reading and reference, and covers often overlooked topics such as preparation and training of service personnel, women in combat, and the indirect effects of combat stress on family. This book is written by clinicians who have in some ways experienced what they write about, and resonates with mental health professionals, servicemen and women, and their families. Any clinician hoping to treat a serviceman or woman effectively cannot afford to overlook this book.

This first story is about the historic missions done by Combat Airmen in Iraq during Operation Iraqi Freedom II in 2004. These Airmen went into Iraq untrained under the control of the U.S. Army for the first time since WW II. However, they persevered and overcame the many barriers they were constantly faced with in a war ravaged country. Although these Airmen felt as if they were at times abandoned by both branches of military they were called to serve, they pulled together and fought for each other in hopes of returning home to their country and loved ones.
