Just over 100 years ago, 16-year-old Ludwig J. Bertele began an apprenticeship as an optical designer in Munich. The potential of this young man, so interested in mathematics, did not go unnoticed for long. At the age of only 20, he stunned the experts with an innovative optical design that was surprisingly powerful for that time. This fast, high-resolution lens made it possible to photograph indoors without flash and tripod for the first time. As a result, a well-equipped camera became the basis for the success of numerous famous photographers. The work of Ludwig J. Bertele played a key role in the rapid development of geometrical optics and thus photography after the First World War. Later, his designs also set new standards in aerial photogrammetry and other specialized fields of optics. This book tells the life story of an exceptionally talented man, autodidact and master of lens element combinations, who repeatedly set important impulses in optics research.

Beautiful Oops!

A life lesson that all parents want their children to learn: It's OK to make a mistake. In fact, hooray for mistakes! A mistake is an adventure in creativity, a portal of discovery. A spill doesn't ruin a drawing—not when it becomes the shape of a goofy animal. And an accidental tear in your paper? Don't be upset about it when you can turn it into the roaring mouth of an alligator. An award winning, best-selling, one-of-a-kind interactive book, Beautiful Oops! shows young readers how every mistake is an opportunity to make something beautiful. A singular work of imagination, creativity, and paper engineering, Beautiful Oops! is filled with pop-ups, lift-the-flaps, tears, holes, overlays, bends, smudges, and even an accordion "telescope"—each demonstrating the magical transformation from blunder to wonder.

Finally, the answer to a 20-year-old mystery: what's in Paul McCarthy's 1984 installation, The Three Boxes? With dry humor, McCarthy finally reveals the entire contents: 110 videotapes. In this catalog, the items are documented as if they were recently unearthed artifacts from a long-extinct culture. Only a photo of each video reel and its slipcase is noted—nothing more. Cryptic descriptions written on the video labels are the only text.

The economic outlook remains clouded by regional and domestic security concerns. Real GDP growth and inflation were broadly in line with program projections in 2001-02. The balance of payments position unproved faster than expected. The budget deficit target for 2001-02 (as set during the first review) was met, despite a shortfall in the Central Board of Revenue (CBR). Broad money increased strongly in 2001-02, despite efforts to sterilize foreign exchange inflows. Reforms in the financial sector made significant progress.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J.
