

Report Of The New Guinea Nutrition Survey Expedition 1947 Edited By E H Hipsley And F W Clements

Papua New Guinea is poised for change, as the country's mineral riches are providing a major opportunity for economic development through the exploitation of natural resources. The government's five-year strategic plan focuses on key development enablers such as free education, improvements to health services, the strengthening of law and order, rural development projects and infrastructure construction. Inward investment has increasingly been driven by the extractive sector, including oil and gas, whose share of the country's total investment stock rose from 71% to 87% between 2004 and 2012. Statistics from the Investment Promotion Authority reveal that the largest share of new foreign direct investment in 2013, some 24.6%, targeted the construction sector, outpacing that in financial services, manufacturing and mining, which accounted for 19.8%, 18.1% and 10.9%, respectively. While minerals and hydrocarbons dominate exports, around 85% of the country's population is employed in the agriculture sector. The start of liquefied natural gas exports in 2014 is expected to return the current account to a surplus in 2015, forecast as high as 12.1% of GDP before returning to 9.1% the following year. While the outlook for state revenues remains strong in the medium term, ensuring the sustainability of further spending increases will be key to preserving macroeconomic stability.

This web site contains the Education for All report for Papua New Guinea. It includes a description and analysis of education in Papua New Guinea as well as information about prospects for the future.

In Papua New Guinea hopes are high that real change is on its way; the country's political, administrative, financial and technical leaders now have to find a way to ensure the most productive distribution and use of financial resources. Many international actors are watching closely to see how this young country negotiates its path. Papua New Guinea became a major exporter of gas in 2014 when the \$19bn PNG liquefied natural gas (LNG) project was completed ahead of schedule and within budget, significantly increasing the size and strength of the economy. The year ahead is likely to see PNG benefit from the further development of its hydrocarbons sector, fuelling the growth of its economy as a whole. The LNG influx also poses challenges, however,

in terms of ensuring inclusive growth and productive use of the new revenues. PNG takes pride in being a final frontier of natural and cultural development, but the task ahead is to protect the country's heritage while becoming part of the global economy.

Territory of New Guinea Anthropological Reports

Papua New Guinea (PNG) is a fragile state, vulnerable to recurrent shocks. A third wave of the COVID-19 pandemic is straining the healthcare system. Widespread vaccine hesitancy has contributed to very low uptake of the vaccines with about only 2 percent of the population fully vaccinated. Real GDP is estimated to rebound modestly to grow by 1.7 percent in 2021 after the downturn in 2020. Elections are due to take place in June 2022, and the formal campaign period will commence by end-April. What kind of experience is incarceration? How should one define its constraints? The author, who conducted extensive fieldwork in a maximum-security jail in Papua New Guinea, seeks to address these questions through a vivid and sympathetic account of inmates' lives. Prison Studies is a growing field of interest for social scientists. As one of the first ethnographic studies of a prison outside

western societies and Japan, this book contributes to a reinterpretation of the field's scope and assumptions. It challenges notions of what is punitive about imprisonment by exploring the creative as well as negative outcomes of detention, separation and loss. Instead of just coping, the prisoners in Papua New Guinea's Last Place find themselves drawing fresh critiques and new approaches to contemporary living.

In terms of investment, Papua New Guinea's
geographic location, geopolitical importance
and abundance of commodities, as well as the
success of the PNG Liquefied Natural Gas
project, have helped it become a favoured
destination for Chinese and Japanese
ventures, with expectations of further
foreign direct investment (FDI) going
forward, particularly in the primary sector.
However, PNG remains a challenging place for
international participants, and while high-
level, strategically important projects are
likely to proceed smoothly, smaller, more
entrepreneurial ventures may face difficulty.
To improve this reputation the country is
trying to boost transparency and efficiency
in business transactions, though new
initiatives under way could see it adopt more
protectionist policies, thereby going against
the tenets of liberal economics it has
traditionally embraced.

Guinea and the government of Australia

Papua New Guinea's 2005 Article IV

Consultation reports that the economy
continues to perform well as the recovery
maintains its momentum and the authorities
adhere to disciplined fiscal and monetary
policies. The central government budget has
been estimated to be once more in surplus in
2005, as mining and petroleum revenue remain
strong and overall expenditure is kept in
check, resulting in a further reduction in
public sector debt. Monetary policy has
achieved a favorable combination of
relatively low interest rates and inflation.
