About the authors
Mark NK Saunders is Professor of Business Research Methods and Director of Postgraduate Research Programmes at Birmingham Business School, University of Birmingham. Philip Lewis was a Principal Lecturer and Adrian Thornhill was a Head of Department, both at the University of Gloucestershire.

As Human Resource Development (HRD) research has developed, a growing variety of quantitative and qualitative data collection procedures and analysis techniques have been adopted: research designs now include mono, multiple and mixed methods. This Hand

Research Methods for Business and Social Science Students aims to present a clear discussion of the research methods employed in various disciplines related to our daily life problems. The theoretical basis of research methods is explained clearly and succinctly. Collecting data is a key part of the book and this includes both qualitative and quantitative methods of data collection, along with the advantages and disadvantages of each method. The book also describes in clear terms how students can analyse data, interpret results and link these to the literature review and hence their own contribution. It sets out a range of fundamental ideas in research methods, such as deductivism and inductivism, and explains why methodology is not the same as method. In this second edition every chapter has been re-written to be more readable and also to include more examples.

The authors have also added a real student research proposal and a multiple-choice test with answers for the readers to test their own understanding of the ideas in the book. The book has been designed to illustrate research tools in a clear and accessible manner through chapters on such topics as formulating research, research design, data analysis and writing up the research results.

'This text provides a timely and comprehensive introduction to major research methods in the Organizational sciences. It will be a boon to all students conducting their projects in this area, and may well become a standard reference for staff teaching research methods to undergraduate and postgraduate students of business studies or organizational behaviour' - Professor Neil Anderson, Goldsmiths College, University of London
This reasonably priced text would provide an invaluable starting point for those considering undertaking research in organisational settings' - Paula Roberts, Nurse Researcher
This book provides the reader with clear pointers for how to conduct organizational research appropriately, through planning and making informed and systematic research decisions, to understanding the ethical implications of applied organizational research, to implementing, reporting and presenting the findings to the highest possible standards. It provides an overview of a wide variety of research strategies, methods of data collection (both qualitative and quantitative) and analysis in a volume accessible to both an undergraduate, postgraduate and practitioner readership alike.
Organizational Research Methods also represents a useful aid to the report writing task, indicating ways in which the project material can be most effectively organised for academic and feedback purposes, and by drawing upon real-life organizational contexts and examples to help the reader understand the core issues. Finally, the book offers a clear, manageable procedure for preparing a presentation to an academic or an organizational audience.
Providing practical guidance on all elements of the research process, this book will be essential reading to all undergraduate and postgraduate students, as well as researchers, in psychology, organizational studies and management disciplines.

Necessary Condition Analysis (NCA) is an emerging method of data analysis, based on the idea that research factors can be necessary for an outcome: if the condition is not there, then the result will not occur. These necessary conditions are everywhere, and NCA is an intuitive and straightforward means of finding and testing data, either as a standalone tool or as a complement to other research methods. This book is an invaluable guide to using NCA effectively in business and management dissertations, and offers practical guidance and insight into how to successfully transcribe and analyse data using the NCA approach in research projects.
