This fully revised and updated edition of a classic in the field maps all the anatomical regions that modern dental students need to know. Highly illustrated with over 300 full-colour diagrams, this text guides the reader through developmental anatomy, the thorax, the central nervous system, and the head and neck. Accessible accompanying text emphasises the connection between anatomy and clinical practice.

This is a collection of multiple choice questions on the lymphatic system, immunity, respiratory system and digestive system. Topics covered include terminology, structure and function, innate immunity, adaptive immunity, cell mediated immunity, antibody mediated immunity, stress, respiratory system anatomy, pulmonary ventilation, lung volume and capacities, oxygen and carbon dioxide exchange, oxygen and carbon dioxide transport, control of respiration, exercise, overview of the digestive system, function, membranes, histology, movement, control of digestion, organs and accessory organs. These questions are suitable for students enrolled in Human Anatomy and Physiology I or II or General Anatomy and Physiology.

This second edition provides 2400 multiple choice questions on human anatomy and physiology, and some physical science, separated into 40 categories. The answer to each question is accompanied by an explanation. Each category has an introduction to set the scene for the questions to come. However, not all possible information is provided within these Introductions, so an Anatomy and Physiology textbook is an indispensable aid to understanding the answers. The questions have been used in end-of-semester examinations for undergraduate anatomy and physiology courses and as such reflect the focus of these particular courses and are pitched at this level to challenge students that are beginning their training in anatomy and physiology. The question and answer combinations are intended for use by teachers, to select questions for their next examinations, and by students, when studying for an upcoming test. Students enrolled in the courses for which these questions were written include nursing, midwifery, paramedic, physiotherapy, occupational therapy, nutrition and dietetics, health sciences, exercise science, and students taking an anatomy and physiology course as an elective.

Multiple Choice Questions in Anatomy and Neurobiology for Undergraduates is a collection of multiple choice questions in anatomy and neurobiology for undergraduate students.

Questions are grouped for each visceral system and the nervous system. In the case of the body framework (including peripheral nerves and blood vessels), however, a regional grouping is used. Each question has the corresponding correct answer. This book is comprised

of eight chapters covering the upper limb, head and neck, musculoskeletal trunk, lower limb, cardiovascular and respiratory systems, gastrointestinal and genito-urinary systems, and neurobiology. Each chapter contains three types of questions designed to test knowledge in different ways. Type A items involve choosing a single correct answer from five available choices. Type L items are used to elicit information on the cause-effect relationship between sets of data. Type E items call for the perception of one or more correct responses among four alternatives, and the responses may be grouped in five different ways. Most questions are also accompanied by an indication of the percentage of students who obtained the correct answer on occasions of previous settings and by a biserial correlation coefficient (r biserial), indicative of the capacity of the question to distinguish between more able and less able students. This monograph is primarily intended for medical undergraduates and will also be useful to academic anatomists building up their own question banks.
