The only hope for survival lies in tracking down two magical artifacts and a secret that disappeared with Maggie's dad. WARNING: This book contains cussing, drawing, and unladylike behavior. Proceed with caution.

Jean-Jacques Sempe's witty drawings and keen eye for the finer points of the human condition have delighted readers in France and beyond for over forty years. Now, his sharply observed and beautifully drawn cartoons are available in English for the first time. 'Nothing is Simple' is classic Sempe - a timeless mix of tender moments and absurd situations. Sempe's world is populated by nosy neighbours, mischievous schoolboys and thwarted lovers, by snooty holidaymakers and crowds of frustrated commuters in the big city. Sempe's inimitable drawings are as fresh, engaging and funny today as when they were first published in 1962. The captions were translated by Anthea Bell, who also helped to bring Asterix the Gaul to the English-speaking world.

Success and career growth in academic life depend upon reaching and influencing the widest audience possible. To do so, scientists strive to develop personalized trust. They do so by establishing a large number of connections through networking and also through the strength of their arguments and the validity and reliability of their research. To secure increasingly rare tenure positions and achieve salary increases, promotions, and recognition, scholars place themselves on a continuum of priorities ranging from total emphasis on networking to complete focus on advancing knowledge, trying to find some middle ground between the two extremes. Anton Oleinik argues that when scholars prioritize networking, science reproduces features of a "small world," in which personal connections prevail. Who knows whom matters more than who knows what. In this scenario, one's status derives more from affiliation with a specific group of scholars or a particular university than from contributing to advancing knowledge. Acknowledging that it would be a mistake to consider networking the main source of evils in science, Oleinik instead criticizes the decisions scholars make while struggling to find that middle ground between networking and advancing knowledge, and managing conflicts between these priorities. The fierce competition for increasingly scarce research funds, and the difficulty of finding jobs in academia underlines the growing importance of the choices made by an academic. Though Oleinik focuses particularly on the social sciences, his ideas are just as relevant to other disciplinary areas.

Mark Davison examines several legal models designed to protect databases, considering in particular the EU Directive, the history of its adoption and its transposition into national laws. He compares the Directive with a range of American legislative proposals, as well as the principles of misappropriation that underpin them. In addition, the book also contains a commentary on the appropriateness of the various models in the context of moves for an international agreement on the topic. This book will be of interest to academics and practitioners, including those involved with databases and other forms of new media.

Author Ned Mohan has been a leader in EES education and research for decades. His three-book series on Power Electronics focuses on three essential topics in the power sequence based on applications relevant to this age of sustainable energy such as wind turbines and hybrid electric vehicles. The three topics include power electronics, power systems and electric machines. Key features in the first Edition build on Mohan's successful MNPERE texts; his systems approach which puts dry technical detail in the context of applications, and substantial pedagogical support including PPT's, video clips, animations, clicker questions and a lab manual. It follows a top-down systems-level approach to power electronics to highlight interrelationships between these sub-fields. It's intended to cover fundamental and practical design. This book also follows a building-block approach to power electronics that allows an in-depth discussion of several important topics that are usually left. Topics are carefully sequenced to maintain continuity and interest.

*African life into the coming millennia is imperiled by White and Asian power. True power must rest in the ownership of the real estate wherever Afrikan people dwell. Economic destiny determines biological destiny. 'Blueprint for Black Power' details a master plan for the power revolution necessary for Black survival in the 21st century. White treatment of Afrikan Americans, despite a myriad of theories explaining White behavior, ultimately rests on the fact that they can. They possess the power to do so. Such a power differential must be neutralized if Blacks are to prosper in the 21st century ... Aply tiled, 'Blueprint for Black Power' stops not at critique but prescribes radical, practical theories, frameworks and approaches for true power. It gives a biting look into Black potentiality. The story of the Special Forces in World War II has never fully been told before. Information about them began to be declassified only in the 1980s. Known as the Jedburghs, these Special Forces were selected from members of the British, American, and Free French armies to be dropped in teams of three deep behind German lines. There, in preparation for D-Day, they carried out what we now know as unconventional warfare: supporting the French Resistance in guerrilla attacks, supply-route disruption, and the harassment and obstruction of German reinforcements. Always, they operated against extraordinary odds. They had to be prepared to survive pitched battles with German troops and Gestapo manhunters for weeks and months while awaiting the arrival of Allied ground forces. They were, in short, heroes.The Jedburghs finally tells their story and offers a new perspective on D-Day itself. Will Irwin has selected seven of the Jedburgh teams and told their stories as gripping personal narratives. He has gathered archival documents, diaries and correspondence, and interviewed Jed veterans and family members in order to present this portrait of their crucial role - a role recognized by Churchill and Eisenhower - in the struggle to liberate Europe in 1944-45. This is narrative history at its most compelling; a vivid drama of the battle for France from deep behind enemy lines.

*It is an acknowledged if not accepted fact that all European societies are being fundamentally transformed, and indeed perceptively unsettled, by increased migrations across nations and by the asserted presence of established minorities within their borders. The scale and speed at which these transformations have taken place have brought in their wake considerable social impacts and no small measure of fear and anxiety. Encounters with such diversity are part and parcel of the social work task, and learning how to negotiate them should be a de facto aspect of the training and continuous professional development of social workers and other social professions. However, the moral and political dimensions of the role, scope and nature of the social work task in responding appropriately to these changed and changing realities are rather more contested. This volume addresses many dimensions of the response to issues of race and ethnicity in social work practice in Europe. It extends the debates on inter-cultural and race equality practice in social work through a stimulating and innovative collection of contributions. This book was originally published as a special issue of the European Journal of Social Work.*

*This sumptuously illustrated volume analyzes artists' representations of angels and demons and heaven and hell from the Judeo-Christian tradition and describes how these artistic portrayals evolved over time. As with other books in the Guide to Imagery series, the goal of this volume is to help contemporary art enthusiasts decode the symbolic meanings in the great masterworks of Western Art. The first chapter traces the development of images of the Creation and the Afterworld from descriptions of them in the Scriptures through their evolution in later literary and philosophical works. The following two chapters examine artists' depictions of the two paths that humans may take, the path of evil or the path of salvation, and the punishments or rewards found on each. A chapter on the Judgment Day and the end of the world explores portrayals of the mysterious worlds between life and death and in the afterlife. Finally, the author looks at images of angelic and demonic beings themselves and how they came to be portrayed with the physical attributes--wings, halos, horns, and cloven hooves--with which we are now so familiar. Thoroughly researched by and expert in the field of iconography, Angels and Demons in Art will delight readers with an interest in art or religious symbolism.*

And he describes the hardships that consumed Ethiopia after the fall of Emperor Haile Selassie and the rise to power of the communist junta, in whose terror thousands of Ethiopians died. The controversial New York City police commissioner and New York Times bestselling author of The Lost Son shares the story of his fall from grace and the effects of his incarceration on his views of the American justice system. Bernard Kerik was New York City's police commissioner during the 9/11 attacks, and became an American hero as he led the NYPD through rescue and recovery efforts of the World Trade Center. His résumé as a public servant is long and storied, and includes receiving a Medal of Honor. In 2004, Kerik was nominated by George W. Bush to head the Department of Homeland Security. Now, he is a former Federal Prison inmate known as #84888-054. Convicted of tax fraud and false statements in 2007, Kerik was sentenced to four years in federal prison. Now, for the first time, he talks candidly about what it was like on the inside: the torture of solitary confinement, the abuse of power, the mental and physical torment of being locked up in a cage, the powerlessness. With newfound perspective, Kerik makes a plea for change and illuminates why our punishment system doesn't always fit the crime. In this extraordinary memoir, Kerik reveals his unprecedented view of the American penal system from both sides: as the jailer and the jailed. With astonishing candor, bravery, and insider's intelligence, Bernard Kerik shares his fall from grace to incarceration, and turns it into a genuine and uniquely insightful argument for criminal justice reform.
