There is a growing backlash against extractive and exploitative forms of tourism that have unleashed what some argue as unacceptable levels of change on local communities and environments. Examples include the rise of 'overtourism', the environmental impacts of the cruise sector, and collaborative economy platforms that have contributed to concerns over housing affordability and availability. Anti-tourism activism is on the rise, and the need to rethink the economic, political and social organisation of tourism in a global world has never been more apparent. It is increasingly clear that we need to rework the values underpinning tourism and visitor economies and move the focus from its traditional emphasis on profit, jobs and growth towards new models of economic and social exchange. This book gives voice to a growing movement of scholars, activists and business leaders who acknowledge that we need to reinvent relationships between tourism production and consumption, and between labour, capital and resources. In the Global North, this exploration of alternative economic and political relationships in tourism has tended to be located at the margins of discussion. The Global South has much to teach the Global North about alternative economic models, different kinds of exchange, new relationships between labour, capital and resources, and resilience. Drawing from case studies in both the North and the South, this edited collection explores how some are reworking tourism, reshaping the economies of tourism, and in the process, how tourism can deliver social and economic wellbeing in a changing world. *Reworking Tourism* will be of interest to scholars

of tourism and development, as well as tourism and economics. The chapters in this book were originally published as a special issue of *Tourism Planning & Development*.

One critical change in how people work, argues Larry Hirschhorn, is that they are expected to bring more of themselves psychologically to the job. To facilitate this change, it is necessary to create a new culture of authority—one in which superiors acknowledge their dependence on subordinates, subordinates can challenge superiors, and both are able to show their vulnerability. For many companies, the past decade has been marked by a sense of turbulence and redefinition. The growing role of information technologies and service businesses has prompted companies to reconsider how they are structured and even what business they are in. These changes have also affected how people work, what skills they need, and what kind of careers they expect.

One critical change in how people work, argues Larry Hirschhorn, is that they are expected to bring more of themselves psychologically to the job. To facilitate this change, it is necessary to create a new culture of authority—one in which superiors acknowledge their dependence on subordinates, subordinates can challenge superiors, and both are able to show their vulnerability. In the old culture of authority, people suppressed disruptive feelings such as envy, resentment, and fear of dependency. But by depersonalizing themselves, they became "alienated"; in the process, the work of the organization suffered. In building a new culture of authority, we are challenged to express these feelings without disrupting our work. We learn how to bring our feelings to our tasks. The first chapters of the book examine the covert processes by

which people caught between the old and new culture of authority neither suppress nor express their feelings. Feelings are activated but not directed toward useful work. The case studies of this process are instructive and moving. The book then explores how organizations can create a culture of openness in which people become more psychologically present. In part, the process entails an understanding of the changes taking place in how we experience our own identity at work and that of "others" in society at large. To do this, the book suggests, we need a social policy of forgiveness and second chances. From the founders of the trailblazing software company 37signals, here is a different kind of business book - one that explores a new reality. Today, anyone can be in business. Tools that used to be out of reach are now easily accessible. Technology that cost thousands is now just a few pounds or even free. Stuff that was impossible just a few years ago is now simple. That means anyone can start a business. And you can do it without working miserable 80-hour weeks or depleting your life savings. You can start it on the side while your day job provides all the cash flow you need. Forget about business plans, meetings, office space - you don't need them. With its straightforward language and easy-is-better approach, Rework is the perfect playbook for anyone who's ever dreamed of doing it on their own. Hardcore entrepreneurs, small-business owners, people stuck in day jobs who want to get out, and artists who don't want to starve anymore will all find valuable inspiration and guidance in these pages. Rework shows you a better, faster, easier way to succeed in business. Most business books give you the same old advice: Write a business plan, study the competition, seek investors, yadda yadda. If you're looking for a book like that, put this one back on the shelf. Read it

and you'll know why plans are actually harmful, why you don't need outside investors, and why you're better off ignoring the competition. The truth is, you need less than you think. You don't need to be a workaholic. You don't need to staff up. You don't need to waste time on paperwork or meetings. You don't even need an office. Those are all just excuses. What you really need to do is stop talking and start working. This book shows you the way. You'll learn how to be more productive, how to get exposure without breaking the bank, and tons more counterintuitive ideas that will inspire and provoke you. With its straightforward language and easy-is-better approach, Rework is the perfect playbook for anyone who's ever dreamed of doing it on their own. Hardcore entrepreneurs, small-business owners, people stuck in day jobs they hate, victims of "downsizing," and artists who don't want to starve anymore will all find valuable guidance in these pages.

An interdisciplinary account of the environmental history and changing landscape of New York City. In this innovative account of the urbanization of nature in New York City, Matthew Gandy explores how the raw materials of nature have been reworked

to produce a "metropolitan nature" distinct from the forms of nature experienced by early settlers. The book traces five broad developments: the expansion and redefinition of public space, the construction of landscaped highways, the creation of a modern water supply system, the radical environmental politics of the barrio in the late 1960s and early 1970s, and the contemporary politics of the environmental justice movement. Drawing on political economy, environmental studies, social theory, cultural theory, and architecture, Gandy shows how New York's environmental history is bound up not only with the upstate landscapes that stretch beyond the city's political boundaries but also with more distant places that reflect the nation's colonial and imperial legacies. Using the shifting meaning of nature under urbanization as a framework, he looks at how modern nature has been produced through interrelated transformations ranging from new water technologies to changing fashions in landscape design. Throughout, he considers the economic and ideological forces that underlie phenomena as diverse as the location of parks and the social stigma of dirty neighborhoods.

After years of watching out for her younger siblings in the wake of their mother's death, she's accepted an invitation from a mentor in America that allows her to resume a dream long deferred. But she can't stop worrying about Aneeka, her beautiful, headstrong sister back in London, or their brother, Parvaiz, who's disappeared in pursuit of his own dream, to prove himself to the dark legacy of the jihadist father he never knew. When he resurfaces half a globe away, Isma's worst fears are confirmed. Then Eamonn enters the sisters' lives. Son of a powerful political figure, he has his own birthright to live up to--or defy. Is he to be a chance at love? The means of Parvaiz's salvation? Suddenly, two families' fates are inextricably, devastatingly entwined, in this searing novel that asks: What sacrifices will we make in the

Master's Thesis from the year 2015 in the subject Computer Science - Software, grade: 1, , course: MS in Project Management, language: English, abstract: This research quantified the role of the different factors of rework including project planning (PP), software requirements specifications document quality (SRSDQ), software testing (ST), software requirements management (SRM), software requirements traceability (SRT), maturity of software development life cycle (SDLC) approach (MSDLCA), changing requirements (CR) & scope creep (SC) with rework & project success (PS) using automated software requirements management tools (UseofSRMT). The underlying associations of the above factors of rework in SDLC and UseofSRMT with rework & PS were quantified through a survey conducted in the software houses. The study quantified the magnitude of rework which was increased/decreased by these factors of rework. The study also quantified the magnitude of PS increased/decreased by these factors of rework. This study concluded that UseofSRMT played a moderating role between factors of rework and PS. The study also quantified the mediating role of rework

between the factors of rework & PS. The study contributed that rework was avoidable in SDLC. Major causes of unsuccessful software projects were determined. Most effective features of software requirements management tools (SRMT) were considered to determine their role as an effective methodology for PS. PS could never be guaranteed by just achieving project milestones/goals in terms of the triple constraints of time, budget & schedule.

Touching on the laws and practices of a wide array of countries around the globe, this book examines the extent to which refugees and asylum-seekers' right to work is protected by international human rights law. The book examines a number of key international treaties, national constitutions and some foundational cases from national courts in order to make the case that the practise of restricting refugees and asylum-seekers access to the labour market is illegal. In so doing, the author examines some intricate legal questions, such as the interpretation of the Refugee Convention's

provisions restricting rights to refugees 'lawfully staying', the application of racial discrimination to citizenship distinctions, and the ways in which limitations on human rights are applicable in this context. The book also looks at some broader philosophical questions such as the meaning of equality and human dignity, and the legitimacy of the right to work. The book goes on to explore broader debates concerning migration and 'open borders' in order to unpack the fears that drive many countries' restrictive measures. Readers are invited to consider whether the world would be a better place with more freedom of movement. It is a unique stand-alone treatment of the subject and includes the Michigan Guidelines on the Right to Work. *Reworking the Relationship between Asylum-Seekers and Employment* is written in an accessible style that will appeal to academics, policy-makers, practitioners and students. It combines a strong black-letter approach with a law in context approach that explains why the law takes its current shape and questions current orthodoxy.

The discovery of the Dead Sea Scrolls more than sixty years ago has revealed a wealth of literary compositions which rework the Hebrew Bible in various ways. This genre seems to have been a popular literary form in ancient Judaism literature. However, the Qumran texts of this type are particularly interesting for they offer for the first time a large sample of such compositions in their original languages, Hebrew and Aramaic. Since the rewritten Bible texts do not use the particular style and nomenclature specific to the literature produced by the Qumran community. Many of these texts are unknown from any other sources, and have been published only during the last two decades. They therefore became the object of intense scholarly study. However, most the attention has been directed to the longer specimens, such as the Hebrew Book of Jubilees and the Aramaic Genesis

Apocryphon. The present volume addresses the less known and poorly studied pieces, a group of eleven small Hebrew texts that rework the Hebrew Bible. It provides fresh editions, translations and detailed commentaries for each one. The volume thus places these texts within the larger context of the Qumran library, aiming at completing the data about the rewritten Bible.

Getting Real details the business, design, programming, and marketing principles of 37signals. The book is packed with keep-it-simple insights, contrarian points of view, and unconventional approaches to software design. This is not a technical book or a design tutorial, it's a book of ideas. Anyone working on a web app - including entrepreneurs, designers, programmers, executives, or marketers - will find value and inspiration in this book. 37signals used the Getting Real process to launch five successful web-based applications (Basecamp, Campfire, Backpack, Writeboard, Tada List), and Ruby on Rails, an open-source web application framework, in just two years with no outside funding, no debt, and only 7 people (distributed across 7 time zones). Over 500,000 people around the world use these applications to get things done. Now you can find out how they did it and how you can do it too. It's not as hard as you think if you Get Real.

Let the CEO of Rework Work help you

understand diversity, equity, and inclusion concepts to actively remove bias from the workplace Dismantling unhealthy workplaces involves much more than talking about it, and more than charts, graphs, and statistics—it requires action. Although it’s increasingly common for businesses of all shapes and sizes to appreciate the importance of diversity and inclusion in the workplace, many are often unaware of bias in the cultures they’ve created. Others might know there’s a problem, but don’t know how to properly address it. UNBIAS: Addressing Unconscious Bias At Work helps you understand concepts of workplace diversity, equity, and inclusion, shows you how to identify bias, and provides you with the tools for actively removing barriers and ensuring equity throughout your organization. Written by Stacey Gordon—CEO of Rework Work, a company on a mission to reduce bias in global talent acquisition and management—this real-world handbook offers step-by-step guidance on creating workplace cultures where employees feel they belong. UNBIAS teaches you to: Identify and address bias in the workplace Understand what you can do to be more inclusive Handle potentially uncomfortable

conversations Discuss race in an authentic and meaningful way Use workplace-proven tools that make concepts of diversity and equity actionable Help your employee resource groups without giving them extra work Place accountability on organizational policies that allow biased behavior UNBIAS is a must-have resource for all employers, managers, and HR professionals seeking to create and sustain healthy, inclusive, and equitable workplace environments.

From across the political spectrum, a group of American leaders have come together. They are CEOs, technologists, community leaders, educators, management experts, and government officials. They believe it is time to change the course of this nation, to Rework America.

It is an axiom of the manufacturing of any complex product that errors will occur that require repair or discard of said product. In building aircraft, Raptor Aerospace encounters and repairs numerous deviations from the original design drawings. This process is known as rework. Reducing the amount of rework necessary represents a substantial opportunity both for improving quality and for cutting cost. Rework can be further split into several categories, with the

simplest repairs referred to as reworkable discrepancies which has been valued at over \$50,000,000 per year. This thesis will present a project that began at the start of the internship, when the author was paired with a specialist from Raptor Aerospace to lead a team whose purpose was to develop an approach and implement improvements that would generate a significant reduction in rework. This process would include both physical changes to the manufacturing process and would target specific aspects of the prevailing culture at Raptor. With no existing plan for reducing rework, the two team leaders began the project by conducting a thorough analysis of existing rework data, focusing on the descriptive texts that were provided by inspectors. This analysis generated a pareto of the inspectors' words, enabling the team to identify the most common causes of rework at Raptor. Based on these results, small teams were created to perform root cause and corrective action analyses on the biggest issues. In addition to the small teams, the co-leaders also searched for solutions that would have a systemic impact on the volume of rework. To this end, an automated tool was developed that would report the rework history of every single task

completed in final assembly. Within the timeframe of the internship (6.5 months), the various approaches completed by the project team produced verified annualized savings of over \$2,000,000, as well as time savings of over 40 manhours per week. In addition, other efforts that were begun but not yet completed have anticipated savings of over \$10,000,000. Finally, the project has produced indications of cultural improvements within Raptor Aerospace, as individuals and departments have begun volunteering to contribute and lead improvement efforts. Overall, it appears that the approaches taken by the project team have successfully launched a change initiative which could have substantial and long-lasting value to Raptor Aerospace.

The classic guide to working from home and why we should embrace a virtual office, from the bestselling authors of Rework "A paradigm-smashing, compulsively readable case for a

radically remote workplace.”—Susan Cain, New York Times bestselling author of Quiet Does working from home—or anywhere else but the office—make sense? In Remote, Jason Fried and David Heinemeier Hansson, the founders of Basecamp, bring new insight to the hotly debated argument. While providing a complete overview of remote work’s challenges, Jason and David persuasively argue that, often, the advantages of working “off-site” far outweigh the drawbacks. In the past decade, the “under one roof” model of conducting work has been steadily declining, owing to technology that is rapidly creating virtual workspaces. Today the new paradigm is “move work to the workers, rather than workers to the workplace.” Companies see advantages in the way remote work increases their talent pool, reduces turnover, lessens their real estate footprint, and improves their ability to conduct business across multiple time zones. But what about the workers? Jason and David point out that remote work means working at the best job (not just one that is nearby) and achieving a harmonious work-life balance while increasing productivity. And those are just some of the perks to be gained from leaving the office behind. Remote reveals a multitude of other

benefits, along with in-the-trenches tips for easing your way out of the office door where you control how your workday will unfold. Whether you're a manager fretting over how to manage workers who "want out" or a worker who wants to achieve a lifestyle upgrade while still being a top performer professionally, this book is your indispensable guide.

This study of sociolinguistic variation examines the relation between social identity and ways of speaking. Studying variations in language not only reveals a great deal about speakers' strategies with respect to variables such as social class, gender, ethnicity and age, it also affords us the opportunity to observe linguistic change in progress. The volume brings together leading experts from a range of disciplines to create a broad perspective on the study of style and

variation. Beginning with an introduction to theoretical issues, the book goes on to discuss key approaches to stylistic variation in spoken language, including such issues as attention paid to speech, audience design, identity construction, the corpus study of register, genre, distinctiveness and the anthropological study of style. Rigorous and engaging, this book will become the standard work on stylistic variation. It will be welcomed by students and academics in sociolinguistics, English language, dialectology, anthropology and sociology.

The twelve essays in this volume propose new

directions in the analysis of class. John R. Hall argues that recent historical and intellectual developments require reworking basic assumptions about classes and their dynamics. The contributors effectively abandon the notion of a transcendent class struggle. They seek instead to understand the historically contingent ways in which economic interests are pursued under institutionally, socially, and culturally structured circumstances. In his introduction, Hall proposes a neo-Weberian venue intended to bring the most promising contemporary approaches to class analysis into productive exchange with one another. Some of the chapters that follow rework how classes are conceptualized. Others offer historical and sociological reflections on questions of class identity. A third cluster focuses on the politics of class mobilizations and social movements in contexts of national and global economic change.

In the middle decades of the twentieth century, Hawai'i changed rapidly from a conservative oligarchy firmly controlled by a Euro-American elite to arguably the most progressive part of the United States. Spearheading the shift were tens of thousands of sugar, pineapple, and dock workers who challenged their powerful employers by joining the left-led International Longshoremen and Warehousemen's Union. In this theoretically innovative study, Moon-Kie Jung explains how Filipinos, Japanese, Portuguese, and others overcame entrenched racial divisions and successfully mobilized a

**mass working-class movement. He overturns the unquestioned assumption that this interracial effort traded racial politics for class politics. Instead, the movement "reworked race" by incorporating and rearticulating racial meanings and practices into a new ideology of class. A proposal to redefine design in a way that not only

challenges the field's dominant paradigms but also changes the practice of design itself. In *Critical Fabulations*, Daniela Rosner proposes redefining design as investigative and activist, personal and culturally situated, responsive and responsible. Challenging the field's dominant paradigms and reinterpreting its history, Rosner wants to change the way we historicize the practice, reworking it from the inside. Focusing on the development of computational systems, she takes on powerful narratives of innovation and technology shaped by the professional expertise that has become integral to the field's mounting status within the new industrial economy. To do so, she intervenes in legacies of design, expanding what is considered "design" to include long-silenced narratives of practice, and enhancing existing design methodologies based on these rediscovered inheritances. Drawing on discourses of feminist technoscience, she examines craftwork's contributions to computing innovation--how craftwork becomes hardware manufacturing, and how hardware manufacturing becomes craftwork.

Processes of reworking printed wiring assemblies (PWA) built with multilayer printed wiring boards (MLPWB) were investigated. Because of the MLPWBs added thickness and increased heat absorption potential, assemblies built with these boards are suspected of being more susceptible to damage during component removal than assemblies built with single-layer double-sided boards. There also have been questions raised about the effect that rework has on the internal connections of the MLPWBs. A review and limited evaluation of all known rework methods resulted in selecting "solder wick" and "vacuum extraction" as the two main rework methods for use in the evaluations. The Appendix defines and describes these rework techniques. Two different groups of units, intended to be representative of a wide range of proposed and presently used MLPWB-component configurations, were fabricated and then reworked by variations of these two techniques. Approximately 16,000 internal connections of MLPWBs were subjected to rework. No internal connections became open or degraded. In

addition, 80 PTHs with internal connections were subjected to 10 cycles of rework to examine the effect of rework on MLPWB internal connections. Continuity of the internal connections was measured before and after all rework. Even though the rework did cause extensive external damage to the MLPWBs (blisters, measles, and land damage, for example), there was no indication of internal connection degradation. The information received thus far leads to the conclusion that internal connections of MLPWBs are not likely to be degraded as a result of assembly rework. More than a quarter of the students who enter four-year institutions and half of those who enter two-year schools depart at the end of their first year. This phenomenon is known as the "departure puzzle," and for years, the most important body of work on student retention has come from sociologist Vincent Tinto. The contributors, including Tinto himself, offer a variety of both theoretical and methodological perspectives to the Student Departure Puzzle. Reworking Japan examines how the past several decades of neoliberal economic restructuring and reforms in Japan have reshaped the nation's corporate ideologies, gender ideologies, and subjectivities of individual employees. With Japan's

remarkable economic growth since the 1950s, the lifestyles and life courses of "salarymen" came to embody the "New Middle Class" family ideal. As Nana Okura Gagné demonstrates, however, the nearly three decades of economic stagnation since the bursting of the economic bubble in the early 1990s has tarnished this positive image of salarymen. In a sweeping appraisal of recent history, Gagné shows how economic restructuring has reshaped Japanese corporations, workers, and ideals, as well as how Japanese companies and employees have responded to such changes. Gagné explores Japan's fraught and problematic transition from the postwar ideology of "companyism" to the emergent ideology of neoliberalism and the subsequent large-scale economic restructuring. By juxtaposing Japan's economic history with case studies and life stories, Gagné goes beyond the abstract to explore the human dimension of the neoliberal reforms that have impacted the nation's corporate governance, socioeconomic class, workers' ideals, and gender relations. Reworking Japan, with its firsthand analysis of how the supposedly hegemonic neoliberal regime does not completely transform existing cultural frames and social relations, will shake up

preconceived ideas about Japanese men in general and salarymen in particular. What of the risk of rework if initial architecture work overlooks what turns out to be critical? Are the rejected & reworked materials kept separately identified and the analysis carried out? Can it be blended or otherwise reworked? What is the rework rate of your change management process? Can components be reworked or packaged differently? Defining, designing, creating, and implementing a process to solve a challenge or meet an objective is the most valuable role... In EVERY group, company, organization and department. Unless you are talking a one-time, single-use project, there should be a process. Whether that process is managed and implemented by humans, AI, or a combination of the two, it needs to be designed by someone with a complex enough perspective to ask the right questions. Someone capable of asking the right questions and step back and say, 'What are we really trying to accomplish here? And is there a different way to look at it?' This Self-Assessment empowers people to do just that - whether their title is entrepreneur, manager, consultant, (Vice-)President, CxO etc... - they are the people who rule the future. They are the person who asks the right questions to make Rework investments
