A streamlined and simplified global history

In *Medicine: Preserving the Passion*, Phil R. Manning, a pioneer and recognized authority in continuing medical education, and Lois DeBakey, a passionate advocate of critical reasoning and leading scholar in scientific communication, endeavor to shift the focus in lifelong learning from group exercises in a lecture hall to self-directed, practice-related activities. Although most experts have applauded this new concept, few publications have addressed methods for implementation. The Manning-DeBakey book describes such methods as devised by outstanding clinicians and academicians to obtain educational benefit from their clinical experience. Some techniques inspired by quality assurance, for example, these master clinicians have used successfully to improve their knowledge, skills, and patient care. This book not only identifies the primary concerns in continuing medical education, but also offers sound recommendations and effective solutions and suggests future directions and approaches.

The authors have analyzed the continuing educational practices of physicians in a wide range of environments, from small communities to the most acclaimed medical centers, and have extracted additional advice from the writings of past authorities like Osler. The resulting concepts will undoubtedly attract wide public attention. Office practice audit, self-directed learning, case indexing, patient education, computer-assisted education, and collegial networks, as well as regular reading, writing, and teaching, are among the successful methods described by physicians and surgeons who exemplify the highest standards of medical practice.

*In the years of and around the First World War, American poets, fiction writers, and dramatists came to the forefront of the international movement we call Modernism. At the same time a vast amount of non- and anti-Modernist culture was produced, mostly supporting, but also critical of, the US war effort. A History of American Literature and Culture of the First World War explores this fraught cultural moment, teasing out the multiple and intricate relationships between an insurgent Modernism, a still-powerful traditional culture, and a variety of cultural and social forces that interacted with and influenced them. Including genre studies, focused analyses of important wartime movements and groups, and broad historical assessments of the significance of the war as prosecuted by the United States on the world stage, this book presents original essays defining the state of scholarship on the American culture*

*This book addresses the ways in which clinical psychologists ought to conceptualize and respond to the prejudice and oppression that their clients experience. Thus, the link between prejudice and oppression to psychopathology is explored. Basic scientific information about prejudice is reviewed, and the current status of the major minority groups is explored. Chapters examine the role of prejudice and oppression in institutional structures such as the Diagnostic and Statistical Manual of Mental Disorders and professional organizations. The discussion addresses ways to assess these phenomena in individual cases and how to intervene in psychotherapy. The book ventures to evaluate the status of the profession of psychology with respect to prejudice, stigmatization, and oppression by critically examining evidence that the profession has responded adequately to these social problems. These issues are hard to talk about and are not well talked about in the field. This book is a push in the right direction.*

Answer key to student book 7.

The story of two brilliant nineteenth-century scientists who discovered the electromagnetic field, laying the groundwork for the amazing technological and theoretical breakthroughs of the twentieth century. Two of the boldest and most creative scientists of all time were Michael Faraday (1791-1867) and James Clerk Maxwell (1831-1879). This is the story of how these two men - separated in age by forty years - discovered the existence of the electromagnetic field and devised a radically new theory which overturned the strictly mechanical view of the world that had prevailed since Newton's time. The authors, veteran science writers with special expertise in physics and engineering, have created a lively narrative that interweaves rich biographical detail from each man's life with clear explanations of their scientific accomplishments. Faraday was an autodidact, who overcame class prejudice and a lack of mathematical training to become renowned for his acute powers of experimental observation, technological skills, and prodigious scientific imagination. James Clerk Maxwell was highly regarded as one of the most brilliant mathematical physicists of the age. He made an enormous number of advances in his own right. But

when he translated Faraday's ideas into mathematical language, thus creating field theory, this unified framework of electricity, magnetism and light became the basis for much of later, 20th-century physics. Faraday's and Maxwell's collaborative efforts gave rise to many of the technological innovations we take for granted today - from electric power generation to television, and much more. Told with panache, warmth, and clarity, this captivating story of their greatest work - in which each played an equal part - and their inspiring lives will bring new appreciation to these giants of science.

A curriculum developed by Ridgewood (NJ) Public Schools to teach grammar - the rules for speaking and writing.

Analogies 1 is instructional material. It presents a step-by-step approach to analogy problem-solving that makes mastery of the techniques manageable for students. Strategies include creating "bridge sentences" as a tool for examining analogies, looking out for words with more than one meaning, solving 2-step analogies, and identifying various types of analogies. These techniques are

This popular resource, now in its second edition, fills a large gap in the clinical literature. The book now includes more than 70 therapeutic exercises by some of the world's leading voice therapists -- including 25 new exercises -- providing a greater assortment of exercises targeting a larger variety of voice disorders.

These exercises, which vary in difficulty, are aimed at helping therapists develop treatment plans and session materials for clients with a wide array of voice disorders.. All of the exercises follow the same format for easy integration into your therapy sessions: title, purpose, origin, overview, and then a detailed step-by-step explanation of the exercise, many of which are complemented by an audio demonstration on an accompanying audio CD.

The reds, the yellows, and the blues all think they're the best in this vibrant, thought-provoking picture book from Arree Chung, with a message of acceptance and unity. In the beginning, there were three colors . . . Reds, Yellows, and Blues. All special in their own ways, all living in harmony—until one day, a Red says "Reds are the best!" and starts a color kerfuffle. When the colors decide to separate, is there anything that can change their minds? A Yellow, a Blue, and a never-before-seen color might just save the day in this inspiring book about color, tolerance, and embracing differences.

Primary Analogies transforms informal analogous thinking into a focused and systematic program. It groups analogous relationships into five categories: descriptive, comparative, categorical, serial, and causal, with three levels of difficulty within each category.

*technology seem to industry or government or indeed to the daily life of people, as a society we believe that those educated in literature, history, and other humanities are in some way better informed, more knowing, and somehow more worthy of the descriptor "well educated." This 19th-century conception of the educated mind weighs heavily on our notions on how we educate our young. When we focus on intellectual and scholarly issues in high school as opposed to issues, such as communications, basic psychology, or child raising, we are continuing to rely on outdated notions of the educated mind that come from elitist notions of who is to be educated and what that means. To accommodate the realities of today's world it is necessary to change these elitist notions. We need to rethink what it means to be educated and begin to focus on a new conception of the very idea of education. Students need to learn how to think, not how to accomplish tasks, such as passing standardized tests and reciting rote facts. In this engaging book, Roger C. Schank sets forth the premises of his argument, cites its foundations in the Great Books themselves, and illustrates it with examples from an experimental curriculum that has been used in graduate schools and with K-12 students. Making Minds Less Well Educated Than Our Own is essential reading for scholars and students in the learning sciences, instructional design, curriculum theory and planning, educational policy, school reform, philosophy of education, higher education, and anyone interested in what it means to be educated in today's world.*
