Life in the Iron Hell "In the neighboring furnace-buildings lay great heaps of the refuse from the ore after the pig-metal is run. Korl we call it here: a light, porous substance, of a delicate, waxen, flesh-colored tinge. Out of the blocks of this korl, Wolfe, in his off-hours from the furnace, had a habit of chipping and moulding figures,—hideous, fantastic enough, but sometimes strangely beautiful: even the mill-men saw that, while they jeered at him. It was a curious fancy in the man, almost a passion." - Rebecca Harding Davis, *Life in the Iron Mills* *Life in the Iron Mills* is one of the first American novels that depicts the precarious state of the impoverished working class. 'Molly Wolfe' is a member of this class working 12 hours a day, six days a week to earn a living. Because of his condition, he cannot develop his innate artistic talent. His cousin, Deborah tries to help him but the consequences are devastating. Xist Publishing is a digital-first publisher. This book covers applications of computational techniques to biological problems. These techniques are based by an ever-growing number of researchers with different scientific backgrounds - biologists, chemists, and physicists. The rapid development of molecular biology in recent years has been mirrored by the rapid development of computer hardware and software. This has resulted in the development of sophisticated computational techniques and a wide range of computer simulations involving such methods. Among the areas where progress has been profound is in the modeling of DNA structure and function, the understanding at a molecular level of the role of solvents in biological phenomena, the calculation of the properties of molecular associations in aqueous solutions, computationally assisted drug design, the prediction of protein structure, and protein - DNA recognition, to mention just a few examples. This volume comprises a balanced blend of contributions covering such topics. They reveal the details of computational approaches designed for biomolecules and provide extensive illustrations of current applications of modern techniques. A broad group of readers ranging from beginning graduate students to molecular biology professions should be able to find useful contributions in this selection of reviews.

Inventive, hilarious and joyously colorful, this fill-in journal was designed to help kids capture nearly everything that's uniquely rad about them. With design-savvy, yet completely kid-friendly illustrations, they're asked to draw or write about a bunch of interesting things -- like what their hair looks like, what their band name would be, what they'd bring to outer space, and how they feel about lightning, lizards and pickles. There may or may not be a place for super-secret stuff inside the book jacket. Whether kids complete their entire compendium on a rainy day, or finish it over a year, it'll become a treasure to look back on and smile. Ideal for the holidays, rainy days and happy occasions of all kinds, this is an imagination-building gift will engage kids for hours on end

When your life is built around a father's wrath, how can you trust in the love of Father God? Mercy Roller knows her name is a lie: there has never been any mercy in her young life. Raised by a twisted and abusive father who called himself the Pastor, she was abandoned by the church community that should have stood together to protect her from his evil. Her mother, consumed by her own fear and hate, won't stand her ground to save Mercy either. The Pastor has robbed Mercy of innocence and love, a husband and her child. Not a single person seems capable of standing up to the Pastor's unrestrained evil. So Mercy takes matters into her own hands. Her heart was hardened to love long before she took on the role of judge, jury, and executioner of the Pastor. She just didn't realize the retribution she thought would save her, might turn her into the very thing she hated most. Sent away by her angry and grieving mother, Mercy's path is unclear until she meets a young preacher

headed to counsel a pregnant couple. Sure that her calling is to protect the family, Mercy is drawn into a different life on the other side of the mountain where she slowly discovers true righteousness has nothing evil about it—and that there might be room for her own stained and shattered soul to find shelter. . . and even love. Mercy's Rain is a remarkable historical novel set in 19th century Appalachia that traces the thorny path from bitterness to forgiveness and reveals the victory and strength that comes from simple faith.

I am pleased to present the Fifth Edition of the Plastics Engineering Handbook. Last published in 1976, this version of the standard industry reference on plastics processing incorporates the numerous revisions and additions necessitated by 14 years of activity in a dynamic industry. At that last printing, then-SPI President Ralph L. Harding, Jr. anticipated that plastics production would top 26 billion pounds in 1976 (up from 1.25 billion in 1947, when the First Edition of this book was issued). As I write, plastics production in the United States had reached almost 60 billion pounds annually. Indeed, the story of the U.S. plastics industry always has been one of phenomenal growth and unparalleled innovation. While these factors make compilation of a book such as this difficult, they also make it necessary. Thus I acknowledge all those who worked to gather and relate the information included in this 1991 edition and thank them for the effort it took to make the Plastics Engineering Handbook a definitive source and invaluable tool for our industry. Ecocriticism and the Idea of Culture: Biology and the Bildungsroman draws on work by Kinji Imanishi, Frans de Waal, and other biologists to create an interdisciplinary, materialist notion of culture for ecocritical analysis. In this timely intervention, Feder examines the humanist idea of culture by taking a fresh look at the stories it explicitly tells about itself. These stories fall into the genre of the Bildungsroman, the tale of individual acculturation that participates in the myth of its complete separation from and opposition to nature which, Feder argues, is culture's own origin story. Moving from Voltaire's *Candide* to Mary Shelley's *Frankenstein* and from Virginia Woolf's *Orlando* to Jamaica Kincaid's *Lucy*, the book dramatizes humanism's own awareness of the fallacy of this foundational binary. In the final chapters, Feder examines the discourse of animality at work in this narrative as a humanist fantasy about empathy, one that paradoxically excludes other animals from the ethical community to justify the continued domination of both human and nonhuman others.

About 2,500 genre films are entered under more than 100 subject headings, ranging from abominable snowmen through dreamkillers, rats, and time travel, to zombies, with a brief essay on each topic: development, highlights, and trends. Each film entry shows year of release, distribution company, country of origin, director, producer, screenwriter, cinematographer, cast credits, plot synopsis and critical commentary.

Free Radicals in Biology, Volume V covers the mechanisms for the generation of free radicals. This volume contains eight chapters that discuss the biology and chemistry of oxy-radicals in mitochondria and the radical-mediated metabolism of xenobiotics. The opening chapter describes the mechanisms of free radical production in enzymatically promoted lipid peroxidation, generally in microsomes or microsomal lipids. The subsequent chapters explore the biochemistry and biology of plant and animal lipoxygenases; the production of superoxide and hydrogen peroxide in mitochondria; and the biological role of these species in mitochondria and related systems. The discussions then shift to the effects of superoxide production in white blood cells, with an emphasis on an evaluation of the oxygen-dependent reactions of the important phagocytic cells, the monocytes, and the polymorphonuclear leukocytes. This volume further covers the formation and the role of oxy-radicals in the red blood cell, which is a very useful system for studying the protection of biological tissue against radical-mediated damage. A chapter presents a comprehensive review of the production of free radicals during the metabolism of xenobiotics. The last chapters provide an overview of the enzymology, biological functions, and free radical chemistry of glutathione peroxidase. These chapters also examine a number of gerontological principles and the effect of antioxidants in aging. Chemists, biologists, and physicists will find this book of great value.

The drawings which compose Sketchbook Works Vol. 1 & 2 were developed through painstaking processes of organized mark making within the rigid confines of the grid. The production of these works employ traditional methods of drawing, as well as unconventional modes such as tediously mixing a vast array of custom marker colors for perfect gradients, laser engraving miniature patterns onto pages, and using destructive processes like dissolving imagery with chemical solvents. These drawing processes craft a diverse array of visual experiences derived not only from organized drawing systems,

but also from mistakes and destructive actions, whose results were sources of evolution seen in this body of work.

This book bridges the gap between ecotoxicology and limnology, offering an ecotoxicological perspective on lake management. The text describes eutrophication of shallow, temperate lakes, and examines the influence of toxic substances on the aquatic ecosystem, and proposes that nutrients like phosphorus are not the only important factor in explaining and managing eutrophication. Draws on a range of studies and experiments, some presented here for the first time.

Mercy's Rain

With U.S. intelligence agencies wracked by internal power struggles and paralyzed by bureaucracy, the president has been forced to establish his own clandestine group--Covert-One. It's activated only as a last resort, when the threat is on a global scale and time is running out.The Utopia Experiment When Dresner Industries unveils the Merge, a device that is destined to revolutionize the world and make the personal computer and smartphone obsolete, Covert-One operative Colonel Jon Smith is assigned to assess its military potential. He discovers that enhanced vision, real-time battlefield displays, unbreakable security, and near-perfect marksmanship are only the beginning of a technology that will change the face of warfare forever--and one that must be kept out of the hands of America's enemies at all costs. Meanwhile, in the mountains of Afghanistan, CIA operative Randi Russell encounters an entire village of murdered Afghans--all equipped with enhanced Merge technology that even the Agency didn't know existed. As Smith and Russell delve into the circumstances surrounding the Afghans' deaths, they're quickly blocked by someone who seems to have access to the highest levels of the military--a person that even the president knows nothing about. Is the Merge really as secure as its creator claims? And what secrets about its development is the Pentagon so desperate to hide? Smith and Russell are determined to learn the truth. But they may pay for it with their lives . . .

Although fiction writers must concern themselves with "big picture" issues such as plot, theme, and character development, much of the day-to-day work of writing involves finding answers to seemingly minor questions: How should I describe the exterior of a house? How can I construct the voice of a historical narrator with authenticity? How should I depict a physically atypical character? Few books on the market address the problems and opportunities present in these and other questions, yet they are the ones that most writers grapple with on a daily basis. Danger on the Page: A Fiction Writer's Guide to Sex, Violence, Dead Narrators, and Other Challenges identifies and explores some of the more common and intractable situational challenges of fiction writing, with chapters grouped into the general subject areas such as scenes, characters, points of view, and settings. Shawver delves into the pitfalls and opportunities of writing about sex, violence, sports, and love; he examines writing from the perspective of a different race, gender, or species; he interrogates conventional beliefs about the use of brand names, the description of architecture, and the portrayal of nature. Throughout, he gives dozens of examples from both literary and commercial fiction so readers can borrow (or reject) other writers' techniques and explore the myriad challenges of fiction writing on their own. A lively and witty approach to a diverse range of specific

writing issues, Shawver's book will appeal especially to intermediate-level writers seeking to bring their craft to the next level.

How far would you go to find yourself? Imagine everything you thought you knew about yourself turned out to be a lie, and you didn't know who was telling the truth? Imagine you possessed a secret so dangerous that, if it were exposed, it would reshape the entire world. What would you do if that secret were your very identity? In almost every way, Palo Vista seems like a typical California city, with office buildings, schools, and homes sprawled out across suburbia, filled with families making a life for themselves at the dawn of the new millennium. But two seniors at Mt. MacMurray High are about to find out that nothing is as it seems. Jason Nix is a star athlete and honors student who can't seem to remember anything about his childhood. Elyse Van Auten is a budding artist from a broken home whose father left her mother two years ago - or so she's been led to believe. Like most teens entering adulthood, Elyse and Jason just want to find out who they really are. For them, however, the stakes go far beyond their own personal quest. Join them on a journey of self-discovery that becomes a desperate fight for survival against enemies determined to conceal the truth ... and find out what happens when that fight becomes personal.

*This IBM Redbooks publication describes how DFSMStvs works, how and when you might use it, and what you need to consider in your plans. This book should be of interest to you if you want to understand how you can increase the service hours of a CICS/VSAM system by reducing or eliminating the batch window, or if you want to run multiple concurrent batch jobs updating common VSAM data sets. This book is written for readers who have some knowledge of CICS, VSAM, and VSAM Record Level Sharing, and who wish to understand more about DFSMStvs. The book reviews how existing products work. It introduces DFSMStvs, offering more detail on how it works, how you might migrate to it, and how you can change your applications or write new applications to exploit it. This is a companion volume to the DFSMStvs Application Migration Guide, SG24-6972, which contains practical examples of migrating programs to run in a DFSMStvs environment, and the DFSMStvs Presentation Guide, SG24-6973, which contains an overview presentation of DFSMStvs.*

*A psychological thriller in the tradition of Patricia Highsmith about two couples caught in a web of conflicting passions while deep-sea diving off the beautiful Canary Islands In the late 1990s, Sven Fiedler and his girlfriend, Antje, left Germany for the island of Lanzarote, rejecting what Sven considered a vulgar culture of materialism and judgment. The young couple set up a diving service catering to tourists eager to bask in the warm sunshine and explore the silent, gleaming marine paradise that makes this otherwise barren volcanic island such a remarkable retreat. Sven's approach was simple: take the mechanics of diving seriously, instruct his clients clearly, and stay out of their personal business as best he can. And life on the island goes smoothly until two German tourists--Jola von der Pahlen, a daytime soap star on the verge of cinematic success, and Theo Hast, a stalled novelist--engage Sven for a high-priced, intensive two-week diving experience. Staying in a guest house on Sven and Antje's property, the two visitors and their hosts quickly become embroiled in a tangle of jealousy and suspicion. Sven is struck by Jola's beauty, her evident wealth, and her apparently volatile relationship with the much older Theo. Theo quickly leaps to the conclusion that Sven and Jola are having an affair, but, oddly, he seems to facilitate it rather than trying to intervene. Antje, looking on, grows increasingly wary of these particular clients. As the point of view shifts from one character to the next, the reader is constantly kept guessing about who knows what, and, more important, who is telling the truth. A brutal game of delusion, temptation, and manipulation plays out, pointing toward a violent end. But a quiet one, down in the underwater world beneath the waves.*
