Perhaps more than any other American city, Chicago has been a center for the study of both urban history and economic inequity. Community Health Equity assembles a century of research to show the range of effects that Chicago's structural socioeconomic inequalities have had on patients and medical facilities alike. The work collected here makes clear that when a city is sharply divided by power, wealth, and race, the citizens who most need high-quality health care and social services have the greatest

difficulty accessing them. Achieving good health is not simply a matter of making the right choices as an individual, the research demonstrates: it's the product of large-scale political and economic forces. Understanding these forces, and what we can do to correct them, should be critical not only to doctors but to sociologists and students of the urban environment—and no city offers more inspiring examples for action to overcome social injustice in health than Chicago.

and a bioethicist, Tia Powell wasn't prepared to address the challenges she faced when her grandmother, and then her mother, were diagnosed with dementia--not to mention confronting the hard truth that her own odds aren't great. In the U.S., 10,000 baby boomers turn 65 every day; by the time a person reaches 85, their chances of having dementia approach 50 percent. And the truth is, there is no cure, and none coming soon, despite the perpetual promises by pharmaceutical companies that they are just one more expensive study away from a pill. Dr. Powell's goal is to move the conversation away from an exclusive focus on cure to a genuine appreciation of care--what we can do for

those who have dementia, and how to keep life meaningful and even joyful. Reimagining Dementia is a moving combination of medicine and memoir, peeling back the untold history of dementia, from the story of Solomon Fuller, a black doctor whose research at the turn of the twentieth century anticipated important aspects of what we know about dementia today, to what has been gained and lost with the recent bonanza of funding for Alzheimer's at the expense of other forms of the disease. In demystifying dementia, Dr. Powell helps us understand it with clearer eyes, from the point of view of both physician and caregiver. Ultimately, she wants us all to know that dementia is not only about

By the time he was thirty, Dr. Benjamin Rush had signed the Declaration of Independence, edited Common Sense, toured Europe as Benjamin Franklin's protégé, and become John Adams's confidant, and was soon to be appointed Washington's surgeon general. And as with the greatest Revolutionary minds, Rush was only just beginning his role in 1776 in the American experiment. As the new republic coalesced, he became a visionary writer and reformer; a medical pioneer whose insights and reforms revolutionized the treatment of mental illness; an opponent of slavery and prejudice by race, religion, or

Once the epicenter of the voting rights struggle, today it's Ground Zero for a new movement that is also Flowers's life's work—a fight to ensure human dignity through a right most Americans take for granted: basic sanitation. Too many people, especially the rural poor, lack an affordable means of disposing cleanly of the waste from their toilets and, as a consequence, live amid filth. Flowers calls this America's dirty secret. In this “powerful and moving book” (Booklist), she tells the story of systemic class, racial, and geographic prejudice that foster Third

HARDER THAN BOOKING A VACATION The US healthcare system excels in research, innovation, and clinical care, but is failing to keep up with the operational challenges of the digital age. Today's healthcare organizations face immense financial challenges, and their most valuable resources--people, rooms, and equipment--are being used inefficiently. The result? Long wait times for patients, overstressed staff, underused assets, and poor ROI for organizations. Why do health systems struggle with optimization? The fundamental problem is one of matching an unpredictable demand for

services with a constrained supply. The math being used to solve this problem is a holdover from the paper-and-pencil era. In Better Healthcare Through Math, authors Mohan Giridharadas and Sanjeev Agrawal show you that there is a better way. Healthcare systems can harness the power of sophisticated, analytics-driven mathematics to optimize the matching of supply and demand. By upgrading to software systems built on better math, they can enable staff to make data-based decisions to flatten peaks of demand and create smoother patient flow. A revealing biography of Dr. Benjamin Rush--fiery signer of the Declaration of Independence, prominent physician, ardent politician, zealous social reformer, passionate humanitarian, and dedicated educator Dr. Benjamin Rush was the Founding Father of an America that other Founding Fathers forgot or ignored--an America of women, African-Americans, Jews, Quakers, Roman Catholics, indentured workers, and the poor. Ninety percent of the people lived in that other America, but none could vote and none had rights to life, liberty, or the pursuit of happiness, either before or after independence from Britain. Alone among the Founding Fathers who

We hear plenty about the widening income gap between the rich and the poor in America and about the expanding distance separating the haves and the have-nots. But when detailing the many things that the poor have not, we often overlook the most critical—their health. The poor die sooner. Blacks die

Download Free Rush University Medical Center Review Of Surgery 4e

sooner. And poor urban blacks die sooner than almost all other Americans. In nearly four decades as a doctor at hospitals serving some of the poorest communities in Chicago, David A. Ansell, MD, has witnessed firsthand the lives behind these devastating statistics. In *The Death Gap*, he gives a grim survey of these realities, drawn from observations and stories of his patients. While the contrasts and disparities among Chicago's communities are particularly stark, the death gap is truly a nationwide epidemic—as Ansell shows, there is a thirty-five-year difference in life expectancy

Download Free Rush University Medical Center Review Of Surgery 4e

between the healthiest and wealthiest and the poorest and sickest American neighborhoods. If you are poor, where you live in America can dictate when you die. It doesn't need to be this way; such divisions are not inevitable. Ansell calls out the social and cultural arguments that have been raised as ways of explaining or excusing these gaps, and he lays bare the structural violence—the racism, economic exploitation, and discrimination—that is really to blame. Inequality is a disease, Ansell argues, and we need to treat and eradicate it as we would any major illness. To do so, he outlines a

Download Free Rush University Medical Center Review Of Surgery 4e

vision that will provide the foundation for a healthier nation—for all. As the COVID-19 mortality rates in underserved communities proved, inequality is all around us, and often the distance between high and low life expectancy can be a matter of just a few blocks. Updated with a new foreword by Chicago mayor Lori Lightfoot and an afterword by Ansell, *The Death Gap* speaks to the urgency to face this national health crisis head-on.

Written for Pilates instructors, manual therapists, personal trainers, and physicians, this text introduces Pilates as a safe fitness and rehabilitation tool for individuals with knee or hip conditions. Developed over 90 years ago by Joseph H. Pilates, the Pilates method is a unique system of stretching and strengthening exercises that have been shown to tone muscles and improve posture, flexibility, range of motion, and balance. Pilates for Hip and Knee Syndromes and Arthroplasties begins with a review of the anatomy of the hip and knee, a discussion of the most common conditions, and an overview of nonoperative and operative treatments. Building this background information will help readers gain a better understanding of why certain exercises are applied at various points in the rehabilitation time

line. The next portion of the text is dedicated to specific Pilates techniques and mat exercises and includes baseline recommendations for range of motion and both pre- and postoperative modifications for the knee and hip. Reference tables outline classical Pilates mat exercises and place them in specific rehabilitation time lines from six weeks to three months, three months to six months, and beyond six months postoperative. More than 600 photos clearly demonstrate the exercises and feature detailed instructions for correct execution of the techniques. To assist with

clients who have never performed Pilates exercises or are in the very early stages after surgery, pre-Pilates exercises are also presented to help build core strength and range of motion. Case scenarios and sample Pilates mat programs provide additional guidelines on the correct application of the exercises, while an exercise finder located in the front of the text quickly directs readers to the appropriate exercises for each postop time line. As a bonus, a Web resource included with the text provides fully trained Pilates instructors with guidelines on using the Pilates equipment to

A revealing and surprising look at how classification systems can shape both worldviews and social interactions. What do a seventeenth-century mortality table (whose causes of death include "fainted in a bath," "frighted," and "itch"); the identification of South Africans during apartheid as

European, Asian, colored, or black; and the separation of machine- from hand-washables have in common? All are examples of classification—the scaffolding of information infrastructures. In *Sorting Things Out*, Geoffrey C. Bowker and Susan Leigh Star explore the role of categories and standards in shaping the modern world. In a clear and lively style, they investigate a variety of classification systems, including the International Classification of Diseases, the Nursing Interventions Classification, race classification under apartheid in South Africa, and the classification of viruses and of tuberculosis. The authors emphasize the role of invisibility in the process by which classification orders human

Download Free Rush University Medical Center Review Of Surgery 4e

interaction. They examine how categories are made and kept invisible, and how people can change this invisibility when necessary. They also explore systems of classification as part of the built information environment. Much as an urban historian would review highway permits and zoning decisions to tell a city's story, the authors review archives of classification design to understand how decisions have been made. Sorting Things Out has a moral agenda, for each standard and category valorizes some point of view and silences another. Standards and classifications produce advantage or suffering. Jobs are made and lost; some regions benefit at the expense of others. How these choices are made and

Download Free Rush University Medical Center Review Of Surgery 4e

how we think about that process are at the moral and political core of this work. The book is an important empirical source for understanding the building of information infrastructures.

provide useful information to the public. This book summarizes the science all healthcare professionals need to know in order to provide objective and relevant information to a variety of patients, from recreational and medicinal users to those who use regularly, and to adolescents and worried parents. The author brings two and a half decades of studying cannabinoid research, and over forty years' experience in psychiatric and addiction medicine practice, to shed light on the interaction between marijuana and the brain. Topics range from how marijuana produces pleasurable sensations, relaxation and novelty (the 'high'), to emerging medical uses, effects of regular use, addiction, and policy. Principles of motivational interviewing are outlined to help clinicians

engage patients in meaningful, non-judgmental conversations about their experiences with marijuana. An invaluable guide for physicians, nurses, psychologists, therapists, and counsellors.

Today's physicians are medical scientists, drilled in the basics of physiology, anatomy, genetics, and chemistry. They learn how to crunch data, interpret scans, and see the human form as a set of separate organs and systems in some stage of disease. Missing from their training is a holistic portrait of the patient as a person and as a member of a community. Yet a humanistic passion and desire to help people often are the attributes that compel a student toward a career in medicine. So what happens along the way to tarnish that idealism? Can a

new approach to medical education make a difference? Doctors Serving People is just such a prescriptive. While a professor at Rush Medical College in Chicago, Edward J. Eckenfels helped initiate and direct a student-driven program in which student doctors worked in the poor, urban communities during medical school, voluntarily and without academic credit. In addition to their core curriculum and clinical rotations, students served the social and health needs of diverse and disadvantaged populations. Now more than ten years old, the program serves as an example for other medical schools throughout the country. Its story provides a working model of how to reform medical education in America.
