Currently most
undergraduate programs in
chemistry provide
inadequate training in the

area of polymeric materials. This despite the fact that these materials are largely responsible by the quality of life that everyone enjoys and that most

Bookmark File PDF Sample Acs Paper

chemistry graduates, at whatever level they decide to seek employment, will work in a polymer or a polymer-related area. This situation has been recognized by the ACS

Bookmark File PDF Sample Acs Paper

Committee on Professional
Training. Current
committee guidelines
contain the expectation
that a treatment of
polymeric materials will
be a part of all

foundational courses in chemistry. This is, perhaps, most readily done for the foundational organic chemistry course. Most commercial polymers commonly used by the

Bookmark File PDF Sample Acs Paper

consuming public are organic in composition and are formed by simple, easily-understood organic reactions. The preparation of polymeric materials can be used to illustrate many

of the fundamental concepts of organic chemistry. Inclusion of some treatment of polymeric materials serves to stimulate student interest and enthusiasm

that illuminate the reactivity pathways and rates of chemical processes are also relevant. The individual volumes in the series are thematic. The goal of each volume is to give the reader,

Bookmark File PDF Sample Acs Paper

volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years should be

presented using selected examples to illustrate the principles discussed. A description of the physical basis of the experimental techniques that have been used to provide the primary
