This open access book focuses on the development of methods, interoperable and integrated ICT tools, and survey techniques for optimal management of the building process. The construction sector is facing an increasing demand for major innovations in terms of digital dematerialization and technologies such as the Internet of Things, big data, advanced manufacturing, robotics, 3D printing, blockchain technologies and artificial intelligence. The demand for simplification and transparency in information management and for the rationalization and optimization of very fragmented and splintered processes is a key driver for digitization. The book describes the contribution of the ABC Department of the Polytechnic University of Milan (Politecnico di Milano) to R&D activities regarding methods and ICT tools for the interoperable management of the different phases of the building process, including design, construction, and management. Informative case studies complement the theoretical discussion. The book will be of interest to all stakeholders in the building process – owners, designers, constructors, and faculty managers – as well as the research sector.

This book introduces readers, and project management practitioners to a number of global companies and projects, that went right and/or wrong. Seeing high percentage of projects failure, mounting to billions of lost revenues annually to companies on global bases, the idea to put together this body of work was born. While the lessons are significantly useful to the public and can be shared, the primary objective of this book however, remains to present the reader with lessons learnt from not only mine, but the collective experience of working with projects. Some of the lessons covered in this book includes the following; It is very good idea to initiate an innovative approach to a project, but the most important thing, is to plan for it adequately, extensively, and be ready for failures and obstacles since nothing goes as you plan. He listens covered in this book are invaluable and timeless.

This book provides a comprehensive look at the Features of KPM, including its emphasis on creativity and teamwork, its broader OC open value systemOCO as opposed to a OC closed technical systemOCO, its close links with corporate strategy and human resource development, and the support infrastructure needed for advancing KPM. Chapters cover both the theory and practice of KPM, citing cases of information and communications technology (ICT) and pharmaceutical companies, among others. KPM holds special relevance today as global competition is increasingly reducing the lifecycle of organizations. Managers will find in KPM not only a way to survive the shake-up, but also a framework of value creation for the next generation.

Economists, geographers and surveyors are beginning to recognise the powerful tool which a Geographical Information System (GIS) offers in effective property management. It provides a means of managing land and property information digitally and in a geographical context, and allows for rapid access to information and a means of analyzing that information in a geographical context. GIS in Land and Property Management shows how to use GIS, both in principle and in practice. It introduces digital mapping and GIS, along with a brief history of the development of GIS and LIS, all with an emphasis on property. In presenting the spectrum of GIS applications in property management it gives a number of case studies from a variety of market sectors, and it analyzes the issues to provide guidance and a number of recommendations for the implementation of GIS. At the same time common themes and issues are drawn out to present a coherent message for students and practitioners. The book is useful for undergraduate and postgraduate students on land management, built environment, economics and geography courses, and for property professionals, in both public and private sectors, looking to GIS as a property management decision aid.

The Practice Standard for Project Risk Management covers risk management as it is applied to single projects only. It does not cover risk in programs or portfolios. This practice standard is consistent with the PMBOK® Guide and is aligned with other PMI practice standards. Different projects, organizations and situations require a variety of approaches to risk management and there are several specific ways to conduct risk management that are in agreement with principles of Project Risk Management as presented in this practice standard. " —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming " There 's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom. " —David Roberts, Vox " This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook. " —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth ' s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

In terms of China's current situation, the prevention and control of land degradation and the development of innovative sustainable land management activities lie within the purview of public works. Further, public-private partnerships (PPPs) hold considerable potential for application in this field. Inner Mongolia is one of the Chinese provinces hardest hit by land degradation. Fortunately, after years of dedicated efforts, meaningful achievements have been made: the increasing participation of the people as a whole, combined with growing investments in land degradation prevention and ecological construction on the part of private enterprises, has to some extent compensated for the lack of government involvement. Further, Inner Mongolia has been a pioneer in the use of PPPs for the prevention and control of land degradation, which has yielded numerous ecological, social and economic benefits. To better promote the development of ecological construction and expand the participation in land degradation control, this book systematically studies the use of PPPs in the Inner Mongolia autonomous region, drawing on field investigations and case analyses to do so. Its main goal is to explore a public-private partnership model that can effectively expand the scale of investment in land degradation prevention and sustainable land management.

The Code of Federal Regulations Title 24 contains the codified Federal laws and regulations that are in effect as of the date of the publication pertaining to Federal housing and urban development programs, including equal opportunity and fair housing; Federal mortgage and mortgage relief programs; neighborhood reinvestment; and Section 8, disabled, elderly, Indian and public housing.

Reengineering .NET Code to Improve Quality, Update Architecture, Access New Tools, and Accelerate Delivery of New Features As software ages, it becomes brittle: difficult to understand, fix, manage, use, and improve. Developers working with many platforms have encountered this problem; now, developers working with Microsoft's .NET are facing it as well. In Reengineering .NET, leading .NET architect Bradley Irbry introduces proven best practices for revitalizing older .NET code and integrating new architectural and development advances into business-critical systems that can't go offline. Using a step-by-step approach, .NET professionals can make legacy enterprise software more reliable, maintainable, attractive, and usable—and make it easier to upgrade for years to come. Through real-world case studies and extensive downloadable sample code, Irbry shows how to carefully plan a .NET reengineering project, understand the true current state of your code, introduce unit testing and other agile methods, refactor to services and controllers, and leverage powerful .NET reengineering tools built into Microsoft Visual Studio 2012. This book is an indispensable resource for all developers, architects, and project managers responsible for existing .NET code bases and for a wide audience of non-technical managers and CTOs who want to understand the unique challenges faced by .NET teams involved in application or system reengineering projects. Coverage includes • Migrating legacy .NET software to more flexible, extensible, and maintainable architectures—without breaking it • Reengineering web applications with the MVC pattern, WinForms software with MVP, and WPF/Silverlight systems with MVVM • Asking the right questions to predict refactoring problems before they happen • Planning and organizing reengineering projects to apply the right expertise to each task at the right time • Using innovative Test Doubling to make unit testing even more effective • Applying Dependency Inversion to break tight coupling and promote easier development and testing • Leveraging source control, defect tracking, and continuous integration • "Cleaning up" legacy solutions to improve them before you even touch business logic • Establishing solid development infrastructure to support your reengineering project • Refactoring to services—including advanced techniques using Repositories, Domain Models, and the Command Dispatcher • Refactoring to controller/view or ViewModel/View pairs
