"This book takes a unique approach of utilizing computer simulation methods to introduce students to the key ideas of statistical inference.Methods such as bootstrap intervals and randomization tests are very intuitive to novice students and capitalize on visual learning skills students bring to the classroom. With proper use of computer support, they are accessible at very early stages of a course with little formal background. Our text introduces statistical inference through these resampling and randomization methods, not only because these methods are becoming increasingly important for statisticians in their own right but also because they are outstanding in building students' conceptual understanding of the key ideas"--

This booklet contains typical midterm and final exams that you may encounter in any Calculus I course (for non-Math majors) at just about any university in North America. Note that it is expected that you solve the midterm and final exams in this booklet within one and two hours, respectively. You should first attempt all problems on your own and then check your answers using the respective answer key. You should not be looking at solutions before that. This is the best way for you to learn.Good luck!
