This volume introduces a series of different data-driven computational methods for analyzing group processes through didactic and tutorial-based examples. Group processes are of central importance to many sectors of society, including government, the military, health care, and corporations. Computational methods are better suited to handle (potentially huge) group process data than traditional methodologies because of their more flexible assumptions and capability to handle real-time trace data. Indeed, the use of methods under the name of computational social science have exploded over the years. However, attention has been focused on original research rather than pedagogy, leaving those interested in obtaining computational skills lacking a much needed resource. Although the methods

here can be applied to wider areas of social science, they are specifically tailored to group process research. A number of data-driven methods adapted to group process research are demonstrated in this current volume. These include text mining, relational event modeling, social simulation, machine learning, social sequence analysis, and response surface analysis. In order to take advantage of these new opportunities, this book provides clear examples (e.g., providing code) of group processes in various contexts, setting guidelines and best practices for future work to build upon. This volume will be of great benefit to those willing to learn computational methods. These include academics like graduate students and faculty, multidisciplinary professionals and researchers working on organization and management science, and consultants for various types of organizations and groups.

The Samsung Galaxy S10 is set to be revealed on February 20. This is based on reports about any new features, the specs, the number of variants of the device, and hardware design upgrades. According to reports, there will be four variants of the S10; Galaxy S10 X, Galaxy S10+, Galaxy S10, and Galaxy S10 Lite. The Galaxy S10 X will have 5G connectivity so it will most likely be launched only where there are 5G networks. Each of the Galaxy S10 series phones will have a different display size. The S10 X is expected to have a huge amount of RAM. There are not enough details about the specs but there is little information about display sizes. Samsung is likely to use the Snapdragon 855, Qualcomm's latest chipset in the flagship phones.

With a seemingly endless amount of marketing dollars at their disposal, Samsung has long been the reigning king of Android. Nobody else comes close on a global scale. This isn't so much because Samsung has always built the best-looking devices, or even developed the most intuitive software. It's because Samsung discovered early on that if they threw enough ad dollars into something, it would guarantee success. And for the most part, they were right. But as we saw with last year's Samsung Galaxy S5, it was clear people were wising up. The device failed to resonate with consumers and in the end, failed to meet Samsung's lofty sales

goals. Sure it had lots of “me too” features (fingerprint reader, heart rate sensor, loads of software enhancements), but it was a jack of all trades and master of none. With the Samsung Galaxy S6 and Samsung Galaxy S6 Edge, Samsung has finally seen the error of their ways. The new handsets aren’t so much a deviation from Samsung’s traditional Galaxy line as they are a very necessary evolution. The good kind. But is it all roses?
