Things (IoT)
architecture that is**

comprised of devices, network, compute, storage, platform, applications along with management and security components. It is organized into five main parts, comprising of a total of 11 chapters. Part I presents a generic

IoT reference model to establish a common vocabulary for IoT solutions. This includes a detailed description of the Internet protocol layers and the Things (sensors and actuators) as well as the key business drivers to realize the IoT

vision. Part II focuses on the IoT requirements that impact networking protocols and provides a layer-by-layer walkthrough of the protocol stack with emphasis on industry progress and key gaps. Part III introduces the concept of Fog

Read PDF Sap
Design Studio
Tutorialspoint

computing and describes the drivers for the technology, its constituent elements, and how it relates and differs from Cloud computing. Part IV discusses the IoT services platform, the cornerstone of the solution followed by the

Security functions and requirements. Finally, Part V provides a treatment of the topic of connected ecosystems in IoT along with practical applications. It then surveys the latest IoT standards and discusses the

***upgrade as this
technology
touches the core
of the entire
electoral
process—the
casting and
counting of the
votes. E-voting
greatly reduces
direct human
control and
influence in this***

process. This provides an opportunity for solving some old electoral problems, but also introduces a whole range of new concerns.

Consequently, e-voting usually triggers more criticism and

opposition and is more disputed than any other information technology application in elections. This Policy Paper outlines contextual factors that can influence the success of e-voting solutions

and highlights the importance of considering these factors before choosing to introduce new voting technologies.
