

Saxon Math First Grade Workbook

Written by Stephen Hake, author of the Saxon Middle Grades programs, Saxon Intermediate 3 is ideal for students looking for a textbook approach that provides a smooth transition into Math 5/4. It is also helpful for students who are coming to Saxon from other programs. Math Intermediate 3 teaches mathematical concepts through informative lessons, helpful diagrams, and interactive activities and investigations.

Saxon math programs produce confident students who are not only able to correctly compute, but also to apply concepts to new situations. These materials gently develop concepts, and the practice of those concepts is extended over a considerable period of time. This is called "incremental development and continual review." Material is introduced in easily understandable pieces (increments), allowing students to grasp one facet of a concept before the next one is introduced. Both facets are then practiced together until another one is introduced. This feature is combined with continual review in every lesson throughout the year. Topics are never dropped but are increased in complexity and practiced every day, providing the time required for concepts to become totally familiar. Each grade level has its own consumable meeting book, which is used during The Meeting at the beginning of each day. This first edition meeting book is for Grade 1.

In 2008, Mark Beaumont smashed the world record for cycling around the world, by an astonishing 81 days. His race against the clock took him through the toughest terrain and the most demanding of conditions. In 2009, Mark set out on his second ultra-endurance challenge. And this one would involve some very big mountains. The Man Who Cycled the Americas tells the story of a 15,000 mile expedition that once again broke the barriers of human achievement. To pedal the longest mountain range on the planet, solo and unsupported, presented its own unique difficulties. But no man had ever previously summited the continents' two highest peaks, Mt McKinley in Alaska and Aconcagua in Argentina, in the same climbing season, let alone cycling between them. Oh, and Mark had never even been up Ben Nevis before. Full of his trademark charm, warmth and fascination with seeing the world at the pace of a bicycle, Mark Beaumont's second book is a testament to his love of adventure, his joy of taking on tough mental and physical feats, and offers a thrilling trip through the diverse cultures of the Americas.
