Science communication is a rapidly expanding area and meaningful engagement between scientists and the public requires effective communication.

Designed to help the novice scientist get started with science communication, this unique guide begins with a short history of science communication before discussing the design and delivery of an effective engagement event. Along with numerous case studies written by highly regarded international contributors, the book discusses how to approach face-to-face science

communication and engagement activities with the public while providing tips to avoid potential pitfalls. This book has been written for scientists at all stages of their career, including undergraduates and postgraduates wishing to engage with effective science communication for the first time, or looking to develop their science communication portfolio. Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and

advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement

officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and

She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb’s effects; helped lead to

important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave.

Henrietta's family did not learn of her "immortality" until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is

inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta’s daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn’t her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta*

Lacks captures the beauty and drama of scientific discovery, as well as its human consequences. Researchers are expected to produce original findings, yet nobody explains how original contributions are conceived in economics.

Recently there have been calls for more creativity in economic research, yet there is no literature that explores creative research apart from collections of biographical essays. This book aims to address that gap, exploring the process of conceiving and generating ideas for interesting and original research contributions in economics (and potentially other social sciences too). Creative Research in

Where To Download Sci Bono Discovery Centre Papers

Economics serves both a practical and theoretical purpose.

Theoretically it presents a unique way of thinking about the nature of problems and questions in economics and the role of social science researchers in society. As such it offers an interesting way to think about the philosophy of science and methodology in economics, and how new ideas emerge in the discipline. Practically it develops techniques for finding interesting and original research contributions (as opposed to conventional data-gathering research). Whether you are a graduate student looking for that first interesting question, a novice

researcher in search of fresh avenues for research after your PhD, or a seasoned academic looking to teach the philosophy and methodology of economics in more interesting ways, you will find this book of great use.

In our rapidly changing world, there is a great need for the public understanding of science and technology to create more science literate society at all age levels. Science centres and science museums are vital and powerful media for popularisation

of science and creating a scientific temper across the globe. Science centres are among those institutions that can play a role in showcasing science to common people, whereas museums enable people to explore collections for inspiration, learning and enjoyment. The mission statements of science centres and modern museums may vary, but all make science accessible to one and all and encourage the excitement of discovery. They are an integral and dynamic part of the learning environment, promoting exploration from the first Eureka! moment to today's cutting edge research. In order to address some of the pertinent issues and review the latest status of development related to science centres, science museums,

An Independent Review presents a collection of 15 important essays on different aspects of education in Gauteng since the advent of democracy in 1994. These essays talk to what a provincial education department does and how and why it does these things whether it be about policy, resourcing or implementing projects. Each essay is written by one or more specialist in the relevant focus area. The book is written to be

accessible to the general reader as well as being informative and an essential resource for the specialist reader. It sheds light on aspects of how a provincial department operates and why and with what consequences certain decisions have been made in education over the last 20 turbulent years, both nationally and provincially. There has been no attempt to fit the books chapters into a particular ideological

The discovery of dinosaurs and other large extinct saurians - a term under which the Victorians commonly lumped ichthyosaurs, plesiosaurs, pterosaurs and their kin - makes exciting reading and has caught the attention of palaeontologists, historians of science and the general public alike. The papers in this collection go beyond the familiar tales about famous fossil hunters and focus on relatively little-known episodes in the discovery and interpretation

(from both a scientific and an artistic point of view) of dinosaurs and other inhabitants of the Mesozoic world. They cover a long time span, from the beginnings of modern scientific palaeontology in the 1700s to the present, and deal with many parts of the world, from the Yorkshire coast to Central India, from Bavaria to the Sahara. The characters in these stories include professional palaeontologists and geologists (some of them well-known, others quite obscure), explorers, amateur fossil collectors, and artists, linked together by

Over the past decade, the field
of urban tourism has
consolidated with the
appearance of several books
that concentrate upon the

Recently, the scope and range
of urban research has widened
considerably, including the
welcome appearance of
studies that examine the

outside the Euro-American heartland. Despite this growing international body of debate and scholarship on tourism and cities, particularly in the developed North, literature that relates to the developing world as a whole, and to Africa in particular, remains sparse. The task of *Urban Tourism in the Developing World: The South African Experience* is to augment the current international scholarship concerning urban tourism in the developing world. More especially, the contributors draw attention to a range of

case studies from South Africa that provide some starting points to address the uneven scholarly coverage of urban tourism the African context has received to date. In addition, the research material presented here seeks to contribute toward raising the South African, and indeed the African profile, within growing international scholarship concerning issues of urban tourism and development. This collection aims to expand an emerging South African and African tourism research "voice" concerning the tourism and development

nexus, as well as to stem critiques that this body of research appears to have developed in a theoretical vacuum, divorced from broader international tourism research discourses. This collection of essays not only further develops an independent South African tourism perspective, but also presents research that is closely tied to international urban tourism research debates. In addition, this analysis of urban tourism in the South African context enriches the rather Western-oriented theories of urban

tourism discourse through its emphasis on how urban tourism is evolving in urban Africa. Christian M.
