SCUBA is a fun, relaxing, educational, interesting, and -- if approached properly -- safe activity, it is nonetheless a sport that has risks. SCUBA diving is in fact an extreme sport that can injure or even kill very quickly, and in some very nasty ways. What we are doing is entering an alien environment that is normally hostile to human life. We cannot breathe in water without some kind of mechanical assistance. These are facts and the details should be covered in every Open Water (OW) class. All too often in today's society, however, people do not want to take the time to properly prepare and get the education to safely take on new tasks. Some agencies appear to have responded to this by developing training programs that turn out high numbers of certified divers in shorter time frames, necessitating the reduction of time spent on what I consider to be some necessary basic skills. While this has resulted in great numbers of new divers entering the water, it has not resulted in many of those divers staying in the water. New divers are often given just enough training to enable them to dive in the most benign conditions under close supervision. Even then, there are still those who find out their initial training was just not adequate. It is at this point that they either make the decision to get more training or they leave the sport. The latter happens all too often. The former, when it does happen, does not always occur for the right reasons. Students should return to training to expand their diving and learn new skills; they should not have to return for new training just to be able to enjoy the sport safely. To require students to come back for basic information is something I find very troubling, and in some cases, has actually cost divers their lives. A lack of rescue instruction has resulted in a number of diver deaths when buddies did not know how to

drop weights, support a diver at the surface, or even stay in contact with their buddy. This is another area frequently talked about, but all too often not actually put into practice. The concept of always diving with a buddy and just what that means in the "real world" is often given too little attention. Unfortunately, it is impossible to foresee every conceivable situation that can arise, but there are many basic issues that can be covered. The following chapters will hopefully address much of what is being overlooked or delayed in many programs as they exist today. It is my hope that this information also finds its way into the hands of those who have not yet begun the training process. I have included a chapter on how to select an instructor based on the quality of instruction and the content of the course. In some cases, these classes may cost more than the less comprehensive courses also available, but usually they do not. In fact, when you consider the additional skills and education gained from a more comprehensive course, you will find that you have received much more value for each dollar spent. In addition, you gain priceless benefits in the form of greater confidence, enjoyment, skills, and -- most importantly -- safety. Enjoy and dive safe

This is a new edition of Greg Louganis's 1995 #1 New York Times bestselling autobiography and Literary Guild Selection. It is the unflinchingly honest first-person account of a man breaking free of a lifetime of silence and isolation. Born to a young Samoan father and Northern European mother, and adopted at nine months, Greg began diving at age nine, and at sixteen won a silver medal at the 1976 Montreal Olympics. But despite his astonishing athletic skill, Greg struggled with late-detected dyslexia, prejudice toward his dark skin coloring and anguish over his homosexuality, which he felt compelled to hide. Being in the spotlight intensified his difficulties with relationships and substance abuse. However, Louganis went on to win double gold medals at the 1984 and 1988 Olympics. His triumph at the 1988 Olympics came several months after he tested positive for HIV. This is the haunting, searingly candid story of the world's greatest diver. This new edition includes a new foreword.

It is unusual that a scuba diving liveaboard should be known for anything other than the quality of the diving service it offers. The MV *Salutay* is that rare exception. Not only does she offer a top and innovative diving service and access to some of the best diving around the United Kingdom and Northern France, she also has divers returning every year because of the wonders that her galley produces. Chef Freda Wright has been getting requests for recipes for many years and generations of divers have begged her to produce a cookbook, so that they can continue to enjoy her mouth-watering meals and snacks when they go home. This is the cookbook that they wanted: a selection of soups, main courses, desserts and snacks that divers aboard the MV *Salutay* have been enjoying for decades and that now you can cook at home for family and friends. As well as the easy-to-follow recipes, this book also includes diving tales from the three decades that Freda and her husband, captain and technical diving pioneer Al Wright, have been exploring British, Irish and French waters. From the story of how Al discovered three major shipwrecks off Malin Head, Ireland at the dawn of the technical diving revolution to diving with seals in St. Kilda and descriptions of exploring the D-Day wrecks in the Baie de Seine, these anecdotes are clips of British diving history: essential reading for new divers and veterans alike.

The second edition of the NAUI Open Water Scuba Diver textbook. Written by NAUI Leaders and researchers who represent the breadth and depth of "Dive Safety Through Education," The NAUI Scuba Diver textbook instructs and informs students to become safe and educated divers about the skills and practices, conditions, equipment and gear, and marine life awareness of scuba diving. This formative, adaptive learning tool keeps students learning and interacting with content in a variety of ways to improve student comprehension and concepts of scuba diving, all while encouraging them to continue their education.

The book manages to combine humor, adventure, tragedy, triumph, heroism, and even some forays into the risqué... while chronicling the careers of 20 enduring personalities that helped make diving what it is today. Some of those interviewed are retired now, one (author Peter Benchley of *Jaws* fame) recently passed away, and many are still making history through their ongoing work. It's quite a group. Consider that the lineup includes actress and Sea Hunt star Zale Parry who also set the depth record for women divers back in 1954. Stan Waterman provides both the book's Foreword and a revealing insider look at his seven decades in diving. Living legend Bev Morgan pioneered the first dive training programs along with revolutionizing commercial diving equipment. His image in full hardhat dress also graces the book's cover. Morgan's candor and humor set the pace for the lively montage of dialogues to follow with Australian couple Ron and Valerie Taylor who rose to fame in the iconic shark documentary film *Blue Water, White Death*. They are joined by others from diving's first generation including filmmaker Al Giddings (*The Deep*, *Abyss*, *Titanic*, etc.), retail pioneer and cameraman Chuck Nicklin (*The Diving Locker*), manufacturers Dick Bonin (*Scubapro*) and Bob Hollis (*Oceanic*), photography masters Ernie Brooks and Paul Humann, as well as deep ocean

explorer Dr. Bob Ballard who discovered the wrecks of the Titanic, Bismarck, and PT-109. Diving's second generation of innovators includes cave explorer Wes Skiles, filmmaker Mike deGruy, wreck explorer John Chatterton (of Shadow Divers fame), IMAX film producer Greg MacGillivray, and the dynamic husband/wife team of Howard and Michele Hall who seem to dominate the realm of documentary underwater films now (Island of the Sharks, Coral Reef Adventure, Deep Sea 3D). Last but not least, Stan Waterman talked Gilliam into sitting for an interview about his own amazing career and, typically, he shares a wicked sense of humor along with some biting perspective about what it was like to champion new technologies and daring approaches to diving business when the sport's ultra-conservatives wanted to suppress nitrox, liveboards, technical diving, diving computers, training methods, and honest journalism. Each chapter is a slice of human interest that lets the reader briefly pull back the curtain on the personal lives of diving's heroes and feel like they are part of the conversation. The full color book is lavishly illustrated with great photographs that capture each interviewee throughout their diving careers. It's a very personal journey and the reader will feel like they pulled up a chair and shared a cup of coffee around a table with each person. Gilliam enlisted help from other leading writers for some interviews he couldn't conduct himself and Fred Garth, Lina Hitchcock, Eric Hanauer, Douglas Seifert and Michel Gilbert & Danielle Alary all make significant contributions to round out the book. It's a massive volume, 8x11 inches in size, 496 pages, hard bound, and weighing in at a whopping eight pounds per copy.

Building on his first book, "SCUBA: A Practical Guide for the New Diver", James Lapenta addresses what is most often the next step in diver training. Advanced Level or Advanced Open Water training is often taken by divers to gain additional skills and knowledge. It is also taken to allow them to gain access to more challenging dives and dive sites. These also pose a greater degree of risk to the individual. Unfortunately some advanced classes are no more than a "taste" or "tour" of advanced level dives. The divers do not get the new knowledge and skills required to safely embark on these dives. In order to safely pursue these dives James has outlined the steps to take to reduce the risk of injury and worse. From describing the dives to offering advice on the content one should expect, as well as selecting an instructor, he offers new and not so new divers guidance. Additional sections on equipment options, air supply management, dive planning, and dive selection for maximum learning potential are looked at. Also included is a section on a subject often overlooked in recreational SCUBA diving - the after-effects of a diving accident and rescue/recovery on the rescuer and witnesses to the event. Post Traumatic Stress in Recreational Dive Rescues is a real possibility and one that must be looked at when executing dives with greater risk. Safety in training and after training is the heart of this work and the driving force behind its publication. James has experienced the best in training and that which left something to be desired. He gives examples of both throughout the work. If you do not have his first book, it is highly recommended that you also acquire it as a companion to this one. While they do contain some sections of the same information, there are sections in the first book that are not included in this that are highly beneficial.

‘ New Frontiers in Marine Tourism ’ is the first book of this kind to address and analyse this burgeoning tourism sector

comprehensively. By integrating aspects such as the sustainability, safety, education, experiences and management of diving tourism the text highlights a variety of pressing topics related to the management of diving tourism, including: * different types of diving locations and their particular characteristics and the geographical distribution of dive locations * the growth and economic significance of diving tourism in destinations worldwide * different motivations and typologies of diving tourists, their learning behaviour, knowledge of marine environments, and their interaction with flora and fauna. * diver satisfaction, attitudes and preferences, education and interpretation, and compliance with regulations * environmental impacts, and aspects of risk and health.

"Into the Lion's Mouth" is the true story of the most notorious "lost bell" diving accident in North Sea history.

"Superbly written and action-packed, The Last Dive ranks with such adventure classics as The Perfect Storm and Into Thin Air."—Tampa Tribune Spurred on by a fatal combination of obsession and ambition, Chris and Chrisy Rouse, an experienced father-son scuba diving team, hoped to achieve wide-spread recognition for their outstanding and controversial diving skills by solving the secrets of a mysterious, undocumented, World War II German U-boat that lay only a half day's mission from New York Harbor. The Rouses found the ultimate cost of chasing their personal challenge: death from what divers dread the most—decompression sickness, or "the bends." In this gripping recounting of their tragedy, author Bernie Chowdhury, himself an expert diver, explores the thrill-seeking, high-risk world of deep sea diving, its legendary figures, most celebrated triumphs, and notorious tragedies.

A Practical Guide for the New Diver

Major events of human prehistory such as the post-glacial recolonisation of Northern Europe and the spread of agriculture through the Mediterranean took place on landscapes that are now, at least partially, underwater. Large parts of this submerged terrain are accessible to divers and can be investigated archaeologically. Prehistoric underwater research has emerged in recent decades as a distinct sub-discipline, developing approaches and methodologies that can be applied in coastal regions worldwide. As a result there is growing

awareness of the potential for underwater archaeology to transform our ideas about the course of prehistory. This volume examines existing practice and new developments in the field of submerged prehistoric landscape research. The 25 peer-reviewed contributions from leading authors cover the results of recent research on three continents and the application of methodologies and techniques for site discovery, investigation and interpretation.

In the spirit of Bill Bryson and Ian Frazier comes this fascinating examination of our past, present, and future beneath the waves. In an age of unprecedented exploration and innovation, our oceans remain largely unknown, and endlessly fascinating: full of mystery, danger, beauty, and inspiration. Bill Streever—a longtime deep-sea diver himself—has masterfully woven together the science and history of Earth's last remaining frontier: the sea. In *Oceans Deep* celebrates the daring pioneers who tested the limits of what the human body can endure under water: free divers able to reach 300 feet on a single breath; engineers and scientists who uncovered the secrets of decompression; teenagers who built their own diving gear from discarded boilers and garden hoses in the 1930s; saturation divers who lived under water for weeks at a time in the 1960s; and the trailblazing men who voluntarily breathed experimental gases at pressures sufficient to trigger insanity. Tracing both the little-known history and exciting future of how we travel and study the depths, Streever's captivating journey includes seventeenth-century leather-hulled submarines, their nuclear-powered descendants, a workshop where luxury submersibles are built for billionaire clients, and robots capable of roving unsupervised between continents, revolutionizing access to the ocean. In this far-flung trip to the wild, night-dark place of shipwrecks, trapped submariners, oil wells, innovative technologies, and people willing to risk their lives while challenging the deep, we discover all the adventures our seas have to offer—and why they are in such dire need of conservation.
