Essentials of Economics

Contemporary Issues

Essays in Institutional Economics

Real examples. Real companies. Real business decisions. Covering the core economics principles and providing engaging, relevant examples within just nineteen Chapters, Hubbard Essentials of Economics is the perfect teaching and learning resource for a one semester unit. The authors present economics as a dynamic, relevant discipline for Australasian students. The key questions students of first year economics ask themselves are: "Why am I here?" and "Will I ever use this?" Hubbard Essentials of Economics answers these questions by demonstrating that real businesses use economics to make real decisions every day. Each chapter of the text opens with a case study featuring a real business or real business situation, refers to the study throughout the Chapter, and concludes with An Inside Look—a news article format which illustrates how a key principle covered in the Chapter relates to real business situations or was used by a real company to make a real business decision.

In this updated fourth edition, author Maurice Levi successfully integrates both the micro and macro aspects of international finance. He successfully explores managerial issues and focuses on problems arising from financial trading relations between nations, whilst covering key topics such as: * organization of foreign exchange markets * determination of exchange rates * the fundamental principles of international finance * foreign exchange risk and exposure * fixed and flexible exchange rates. This impressive new edition builds and improves upon the popular style and structure of the original. With new data, improved pedagogy, and coverage of all of the main developments in international finance over the last few years, this book will prove essential reading for students of economics and business.

Studies in the Economics of Uncertainty presents some new developments in the economics of uncertainty produced by leading scholars in the field. The contributions to this Festschrift in honor of Professor Josef Hadar of Southern Methodist University cover a broad range of topics centered on the principle of Stochastic Dominance. Topics covered range from theoretical and statistical developments on Stochastic Dominance to new applications of the Stochastic Dominance Theory. The intended audience includes researchers interested in recent developments in tools used for decision-making under uncertainty as well as economists currently applying Stochastic Dominance principles to the analysis of the Theory of Firm, International Trade, and the Theory of Finance.

Reviews Canada's post-war history and recounts how Canadians strove for prosperity, international respectability, and a more vigorous national culture.

This book is distilled from articles presented at two seminars held at Rutgers -- The State University of New Jersey on October 25, 1991, and May 1, 1992, entitled 'Economic Innovations in Public Utility Regulations'. These contributions represent the best new research on various topics in public utility regulation, including topics in antitrust law, the environmental impact of public utility regulation,

incentive regulation, price-cap regulation, and contractual relationships.

Microeconomics for Public Managers

Inequality in the 21st Century

Coll Sci Pap V5

"It is a measure of Professor Samuelson's preeminence that the sheer scale of his work should be so much taken for granted," observes a reviewer in the Economist who goes on to note that "a cynic might add that it would have been better for Professor Samuelson to write less merely to give others a chance to write at all." In fact, Samuelson's output, his "extraordinary mastery of methods, both mathematical and linguistic" (review of Volume 4 of The Collected Scientific Papers), have not diminished. Volume 5 collects 108 articles written since 1976, bringing the total to nearly 400 important contributions to economics. As in earlier volumes, the papers are arranged by subject. They cover Economic Theory: Marx, Keynes, and Schumpeter; International Economics; Stochastic Theory; Classical Economics; Mathematical Biology; Biographical and Autobiographical Writings; and Current Economics and Policy. Volumes 1 through 4 encompass more than 280 articles. The first two contain virtually all of Samuelson's contributions to economic theory through mid-1964; Volume 3 contains all the scientific papers written from mid-1964 through 1970, and the last volume brings his work up to through 1976. Paul Samuelson received the Nobel Prize in Economics in 1970 and is Institute Professor of Economics Emeritus at MIT. Kate Crowley edited volume 4 of The Collected Scientific Papers with Hiroaki Nagatani.

By the time of his death the English economist Lionel Robbins (1898-1984) was celebrated as a 'renaissance man'. He made major contributions to his own academic discipline and applied his skills as an economist not only to practical problems of economic policy - with conspicuous success when he served as head of the economists advising the wartime coalition government of Winston Churchill in 1940-45 - and of higher education - the 'Robbins Report' of 1963 - but also to the administration of the visual and performing arts that he loved deeply. He was devoted to the London School of Economics, from his time as an undergraduate following active service as an artillery officer on the Western Front in 1917-18, through his years as Professor of Economics (1929-62), and his stint as chairman of the governors during the 'troubles' of the late 1960s. This comprehensive biography, based on his personal and professional correspondence and other papers, covers all these many and varied activities.

A history of debates concerning the impact of technology on employment, and a description of the techniques used by economists in establishing a consensus opinion.

With Annotations

I.C.S.E. Economics Applications

"In this book Harold L. Vogel comprehensively and holistically examines the business economics and investment aspects of major components of the travel industry, including airlines, hotels, casinos, amusement and theme parks, cruise lines, and tourism. The book is designed as an economics-grounded text that uniquely integrates reviews of each sector's history with

economics, accounting, and financial aspects and analysis. As such, it provides a concise, up-to-date reference guide for financial analysts, economists, industry executives, legislators and regulators, advertisers, and journalists interested in the economics, financing, and marketing of travel and tourism-related goods and services. The fourth edition of this well-established text updates, refreshes, and significantly broadens the coverage of tourism economics. It includes new sections on travel law and applications of big data and artificial intelligence technologies as well as additional material on demographic spending patterns, the online travel agency business, the pandemic's effects and affects on industry finances, expanded coverage of the cruise line industry, and information on the damage to tourist destinations caused by excessive pollution and traffic."--

This title was first published in 2003. Over the decades, experiential methods have become an established research tool in environmental economics. Economists working in this area have realised that experimental methods from economics and other disciplines such as psychology and decision theory can be applied to gain insight into the behavioral underpinnings of environmental policy. Economic experiments, in the lab and field, are an attractive tool to address the incentive and contextual questions that arise in environmental policy. Experiments have been and continue to be designed to capture the key elements of market and non-market choices to test theory, for pattern recognition, to testbed new institutions, and to value public goods, including environmental protection. This volume collects the most significant papers in the literature that identify the underpinnings of experimental approaches are complemented by works that specifically address the use of experimental economics to identify choice under risk, conflict, cooperation, environmental policy instruments, and environmental valuation

This comprehensive discussion of international trade theories focuses on logically distinct models of international trade rather than on chronology or "schools of thought." The author gives primary attention to the differences in the empirical implications derivable from the "Heckscher-Ohlin model" and from the simple classical comparative models of international trade. He also emphasizes the recurrence of controversy over matters of aggregation, due to the lack of a common criterion, and the rich variety of model types that result from dynamic theorizing, discrediting the search for an ultimate dynamic international trade model. This book is intended especially for teachers and graduate students who require a broad understanding of basic theories in the field.

Models and Methods

Health Care Financing Review

Some 18 essays by American institutional economist Klein (Pennsylvania State U.), written over the last two decades, are grouped under five major heads: institutionalism--a basic perspective; institutionalism and concentrated power; the role of the public sector; applied institutional economics; and the obligation of the economist. Paper edition (unseen), \$22.50. Annotation copyright by Book News, Inc., Portland, OR

Microeconomics for Public Managers presents a rigorous non-mathematical introduction to the study of microeconomics geared towards managers of nonprofit institutions. Provides an introduction to the economist's toolkit for students destined for not-for-profit enterprises and public institutions Topics are selected for their relevance to the non-profit sector, enabling key issues to be covered in greater depth than standard microeconomic textbooks Pertinent case studies and cost-benefit analysis are utilized throughout Features end-of chapter problem sets and study questions Describes economic decision-making applicable to non-profit managers Accompanying website with instructor materials is available at www.blackwellpublishing.com/keating

This volume addresses profound issues in international economics, with contributions from leading researchers on the implications of trade. Empirical studies address preferential trading arrangements, global imbalances and exchange rates, facilitating an understanding of how the economy functions and enabling detailed policy evaluation.

Don't waste time studying from Old pattern MCQ books or Question Banks when now there is a Sample Paper book strictly based on the CBSE Sample Papers of September 2nd, 2021. These Sample Papers are prepared by the TOP CBSE Experts and are the only ones in the market for paper-wise practice on the completely changed MCQ pattern.

This book provides selections from the seminal works of Karl Marx, Max Weber, W.E.B. Du Bois, and Charlotte Perkins Gilman that reveal some of the reasons why class, race, and gender inequalities have proven very adaptive and can flourish even today in the 21st century.

The foundations of the treatment of the short period were laid by Marshall, and it is his discussion of the concept in "Principles" and his conception of quasi-rent which, together with the additions of later economists, provide the material upon which the author elaborates here.

Power, Politics, and Provincialism

Volume 2 Surveys I-V

Introducing Race and Gender into Economics

Economic Innovations in Public Utility Regulation

International Finance

The Asian Economic Review

This book focuses on the changing landscape of class action law and its interaction with the economic analysis of key issues in class actions. Articles examine the elements of class action law from viewpoints, featuring defendant and plaintiff perspectives, concerning domestic and international law, and written by lawyers and economists.

It is a measure of Professor Samuelson's preeminence that the sheer scale of his work should be so much taken for granted, observes a reviewer in the Economist who goes on to note that a critic that it would have been better for Professor Samuelson to write less merely to give others a chance to write at all. These volumes contain virtually all of Professor Paul A. Samuelson's contributions to economic theory through mid-1964 - a total of 129 papers. Included are his classic articles on such topics as revealed preference, factor-price equalization, and public goods; as well as some articles that until now have only been privately circulated or "buried" in Festschriften, such as "Market Mechanisms and Maximization" and "The Structure of a Minimum Equilibrium System." The articles have been grouped together into five books, compiled in two volumes. The books, in turn have been divided into sections, each of which contains articles on the same or closely related topics. Within the sections, the articles are arranged chronologically. The graduate student and professional economist will welcome The Collected Scientific Papers of Paul A. Samuelson as a valuable addition to their libraries.

Economics has tended to be a very male, middle class, white discipline. Introducing Race and Gender into Economics is a ground-breaking book which generates ideas for integrating race and gender into introductory economics courses. Each section gives an overview of how to modify standard courses, including macroeconomics, methodology, microeconomics as well as race and gender-sensitive issues. This up-to-date work will be of increasing importance to all teachers of introductory economics.
