An Overview of Islamic Finance

This original book examines how investment theory and regulatory constraints are linked to the professional processes of portfolio investments, and how the principles of Islam as defined by sharia fit into these processes. It also explores the measures required to create and grow a global Islamic asset management industry.

Unprecedented economic growth and wealth accumulation in predominantly Muslim countries have prompted many financial institutions in the US and Europe to position their investment teams across the Middle East and Asia to be closer to the markets in which they invest, and to take advantage of asset-gathering opportunities. This growth has also encouraged an increasing number of western financial institutions to adopt legislation that responds to the requirements of the Muslim investment community. To be effective in these markets it is essential that professionals have an understanding of how Sharia's legal principles are applied in the financial sector. Failure to do so exposes them and their clients to potential financial, legal and reputational pitfalls. The Chancellor Guide to the Legal and Sharia's Aspects of Islamic Finance is the first professional reference to focus specifically on the legal dimension of Islamic Finance. The guide brings together nineteen Islamic Finance legal practitioners and advisers to provide a comprehensive yet practical legal perspective on the subject. Each contributor draws on several years' hands-on experience in Islamic Finance product development and advice to leading financial institutions to provide a real-world, contemporary assessment of the key legal issues in Islamic Finance. The guide's hands-on approach and accessible style make it required reading for everyone with a professional interest in Islamic Finance, be they lawyers, accountants, regulators, bankers or investors. It is also a unique reference for academic institutions worldwide.

Can Islamic finance save the global system? Islamic Finance and the New Financial System describes how the adoption of Islamic finance principles in future regulatory decisions could help prevent future shocks in the global financial system. Using illustrations and examples to highlight key points in recent history, this book discusses the causes of financial crises, why they are becoming more frequent and increasingly severe, and how the new financial system will incorporate elements of Islamic finance – whether deliberately or not. With an introspective look at the system and an examination of the misconceptions and deficiencies in theory vs. practice, readers will learn why Islamic finance has not been as influential as it should be on the largerglobal system. Solutions to these crises are thoroughly detailed, and the author puts forth a compelling argument about what can be expected in the future. Despite international intervention and global policy changes, the financial system remains in a fragile state. There is an argument to be made about integrating Islamic finance into the new system to facilitate stronger resilience, and this book explains the nuts and bolts of the idea while providing the reader with general understanding of Islamic finance. Understand the key principles of Islamic finance Examine the history of the current financial system Discover how Islamic finance can help build a new debt-free economy. Lum how Islamic finance theory doesn't always dictate practice Although Islamic finance is a growing market, it is still a foreign concept to many. Islamic Finance and the New Financial System provides clever analysis and historical background to put the issues into perspective.

This book provides an original account detailing the origins and components of a faith-based accounting system that was founded around 629 CE. By examining the historical development that the accounting systems underwent within the context of faith-based rules and values, the book explains what is meant by the term "faith-based accounting", together with a discussion of its characteristics in relation to various product structures and the underlying Islamic finance principles. It provides important theoretical and practical contributions by explaining accounting as a value-based science rather than a value-free object or abstract. This book explores the way in which religious rules act as a directive for accounting and auditing practices in IFs. Through which the concept of money and digital currency within the theory of money and how it is enacted in a faith-based context, amid differences of opinions among its actors, is examined. This is an important foundation to explain Islamic accounting and includes how this outcome would shape the faith-based view regarding the new phenomenon of digital currency (DC). Also featured is the concept of paper money within the theory of money and how it is enacted in a faith-based legal framework by identifying two core concepts of today's Fiat money as being a single genus or multi-genera money. This book is not merely an academic work, nor is it a pure practitioner guide; rather, it is a robust work that combines both. It marries rigorous academic research and theories with practical industry experiences. The book provides a clear and concise guide to accounting in Islamic economics and finance and how Islamic financial institutions could meet the applicable faith-based rules in their accounting practices.

A Practitioner's Guide to the Global Markets

This paper aims at developing a better understanding of Islamic banking (IB) and providing policy recommendations to enhance the supervision of Islamic banks (IBs). It points out and discusses similarities and differences of IBs with conventional banks (CBs) and reviews whether the IBs are more stable than CBs. Given the risks faced by IBs, the paper concludes that they need a legal, corporate and regulatory framework as much as CBs do. The paper also argues that it is important to ensure operational independence of the supervisory agency, which has to be supported by adequate resources, a sound legal framework, a well designed governance structure, and robust accountability practices.

This book provides valuable insights into the practical challenges faced by the nascent Islamic finance industry and compares the Australian experience to developments in the UK. It contributes to a greater understanding of how Muslims living as a minority in Australia and the UK negotiate Islamic doctrine in secular societies by focusing on one aspect of this negotiation, namely the prohibition of riba. There is little debate in the Islamic tradition on the prohibition of riba? The differences, however, lie in the interpretation of riba? and the question of how Muslims live in a society that is heavily reliant on interest and conventional banking, yet at the same time adhere to Islamic guidelines. Through the words of religious leaders, Muslim professionals and university students, Imran Lum provides real accounts of how Muslims in Australia and the UK practically deal with conventional banking and finance products such as home loans, savings accounts and credit cards. He also explores Muslim attitudes towards Islamic finance and queries whether religion is the sole determining factor when it comes to its uptake. Drawing on his own unique experience as a practitioner responsible for growing an Islamic business in a conventional bank, Lum provides a firsthand account of the complexities associated with structuring Islamic finance products that are not only sharia compliant but also competitive in a non-Muslim jurisdiction. Using sukuk bonds as a case study, he highlights the tangible and non-tangible barriers to product development, such as tax and regulatory requirements and the rise of Islamophobia. Combining academic and industry experience, Lum unpacks the relationship of Islamic finance with Muslim identity construction in the West and how certain modalities of religiosity can lead to an uptake of Islamic finance, while others can lead to its rejection.

Islamic finance has started to grow in international finance across the globe, with some concentration in few countries. Nearly 20 percent annual growth of Islamic finance in recent years seems to point to its resilience and broad appeal, partly owing to principles that govern Islamic financial activities, including equity, participation, and ownership. In theory, Islamic finance is resilient to shocks because of its emphasis on risk sharing, limits on excessive risk taking, and strong link to real activities. Empirical evidence on the stability of Islamic banks, however, is so far mixed. While these banks face similar risks as conventional banks do, they are also exposed to idiosyncratic risks, necessitating a tailoring of current risk management practices. The macroeconomic policy implications of the rapid expansion of Islamic finance are far reaching and need careful considerations.

Introduction to Islamic Banking and Finance is a succinct guide to the key characteristics of Islamic banking highlighting how these differ from conventional banking. This detailed book illustrates how Islamic banking is consistent with the Shariah, a key element of which is the prohibition on collecting and paying interest. This central religious precept appears to rule out most aspects of modern finance but it does allow for trading tangible assets and business, which can then generate a profit. Brian Kettell's book looks at all aspects of Islamic banking, including chapters on its creation and evolution through to detailed discussions of the issues involved in the Shariah's contracts of Murabaha, Mudaraba, Musharaka, Ijara, istisna'a, and Salam, Islamic insurance (Takaful) is also covered. Finally the book takes a look at Shariah law and Shariah boards, indicating the roles and responsibilities that come with membership. Islamic banks have been operating in places such as Bahrain, Saudi Arabia, Malaysia and Dubai for some time. Conventional bankers have traditionally viewed the sector as a small, exotic niche but recent years have seen a dramatic surge in popularity. A number of Western investment banks have started working with Muslim clerics to create new ranges of financial products designed for devout Muslims, a large and growing market. Although estimates of the size of the Islamic finance industry vary greatly, everyone agrees that it is expanding rapidly and this is the perfect book for anyone looking to understand the industry. This newsecond edition has been fully updated, insightful chapters by leading practitioners in Islamic financing (including from Hogan Lovells, White & Case and Taylor Wessing), and analyses market trends, key developments and structures for sukuk, syndications, funds, takaful, project financing and Islamic liquidity management. New to the second edition are chapters on the regulation of Islamic finance and an overview of the sukuk market."

The Handbook of Research on Islamic Business Ethics is an essential source for policymakers and researchers to gain an understanding of pressing ethical issues in the Islamic business world. The primary objective is to provide readers with an insight into the ethical principles that govern Islamic business conduct. These principles are articulated with a view to evaluating whether business actors uphold their social responsibilities and are committed to ethical values in their conduct. Exploring the intertwining relationship between Islamic business ethics and the market, this Handbook examines the critical role that ethics can play in ensuring that business thrives. It offers theoretical perspectives on research and goes beyond the conventional treatment of Islamic ethics. It debates important market issues and asserts that social actors in the Islamic business world should be cognisant of these issues so as to behave in a moral and responsible manner. Implications for researchers and for market conduct are illuminated. Readers wanting to familiarize themselves with day-to-day Islamic business ethics will find this Handbook an invaluable guide.

This paper analyzes the implications of Islamic precepts on banks' structure and activities, focusing on banking supervision issues. It points out and discusses these issues in the context of a paradigm version of Islamic banking, as well as in frameworks that fall between the paradigm version and conventional banking. The case of Islamic banks operating in a conventional system is also examined.

The phenomenal growth of Islamic finance in the last few decades has been accompanied by a host of interesting questions and challenges. One of the critical challenges is how Islamic financial institutions can be motivated to participate in the 'equity-like' profit-and-loss sharing (PLS) contracts. It is observed that Islamic banks are reluctant to participate in the pure PLS scheme which is manifested by the rising concentration of investment on murabaha or mark-up financing. This phenomenon has been the hotbed of academic criticism on the contemporary practice of Islamic banking. This book explains the 'murabaha syndrome' in light of the incentive provided by the current institutional framework and what are the changes required in the governance structure to mend this anomaly.
