form a large and growing proportion of the world ' s population. Professionals working to develop systems and environments need to better accommodate the user needs of the older adult. This new guide provides a practical introduction to human factors and the older adult. It considers the subject primarily from an engineering psychology perspective, heavily grounded in today ' s scientific knowledge. The authors show how current understanding of age-related issues of perception, cognition, and movement control can be applied in practice. They also provide a reference source

with guidelines and advice for design issues ranging from lighting, computer input device selection, and web site design, to training program development and work task design. The text draws on research-oriented work and presents this in a form that can be used by the broad audience of product designers, health care practitioners, managers, and others who need answers to problems and require sound recommendations for design.

***differentiated understanding of reduction and thus forms a standpoint that allows definition of aspects of simplicity. Possible uses of the notion of minimalism in the field of human–computer interaction design are examined both from a theoretical and empirical viewpoint, giving a range of results. Minimalism defines a radical and potentially useful perspective for design analysis. The empirical examples show that it has also proven to be a useful tool for generating and modifying concrete design techniques.***
