Chopin in Paris introduces the most important musical and literary figures of Fryderyk Chopin's day in a glittering story of the Romantic era. During Chopin's eighteen years in Paris, lasting nearly half his short life, he shone at the center of the immensely talented artists who were defining their time -- Hugo, Balzac, Stendhal, Delacroix, Liszt, Berlioz, and, of course, George Sand, a rebel feminist writer who became Chopin's lover and protector. Tad Szulc, the author of Fidel and Pope John Paul II, approaches his subject with imagination and insight, drawing extensively on diaries, memoirs, correspondence, and the composer's own journal, portions of which appear here for the first time in English. He uses contemporary sources to chronicle Chopin's meteoric rise in his native Poland, an ascent that had brought him to play before the reigning Russian grand duke at the age of eight. He left his homeland when he was eighteen, just before Warsaw's patriotic uprising was crushed by the tsar's armies. Carrying the memories of Poland and its folk music that would later surface in his polonaises and mazurkas, Chopin traveled to Vienna. There he established his reputation in the most demanding city of Europe. But Chopin soon left for Paris, where his extraordinary creative powers would come to fruition amid the revolutions roiling much of Europe. He quickly gained fame and a circle of powerful friends and acquaintances ranging from Rothschild, the banker, to Karl Marx. Distinguished by his fastidious dress and the wracking cough that would cut short his life, Chopin spent his days composing and giving piano lessons to a select group of students. His evenings were spent at the keyboard, playing for his friends. It was at one of these Chopin gatherings that he met George Sand, nine years his senior. Through their long and often stormy relationship, Chopin enjoyed his richest creative period. As she wrote dozens of novels, he composed furiously -- both were compulsive creators. After their affair unraveled, Chopin became the protégé of Jane Stirling, a wealthy Scotswoman, who paraded him in his final year across England and Scotland to play for the aristocracy and even Queen Victoria. In 1849, at the age of thirty-nine, Chopin succumbed to the tuberculosis that had plagued him from childhood. Chopin in Paris is an illuminating biography of a tragic figure who was one of the most important composers of all time. Szulc brings to life the complex, contradictory genius whose works will live forever. It is compelling reading about an exciting epoch of European history, culture, and music -- and about one of the great love dramas of the nineteenth century.

Sailing Made Easy is the first step in a voyage that will last you the rest of your life. It is a gift from a group of dedicated sailing professionals who have committed their lives to sharing their art, their skill, and their passion for this wonderful activity. This book, which Sailing Magazine called "best in class" upon its release in 2010, is the most comprehensive education and boating safety learn-to-sail guide to date. It is also the official textbook for the ASA Basic Keelboat Standard (ASA 101). Incorporated in the textbook are useful illustrations and exceptional photographs of complex sailing concepts. The text's most distinguishing feature is its user friendly "spreads" in which instructional topics are self-contained on opposing pages throughout the book. There are also chapter end quizzes and a glossary to help those new to sailing to navigate their way through the extensive nautical terminology.

In this inspirational and humorous collection of essays, author John Dietsch sees his addiction to and passion for fishing as a parable that can help us shift from compulsive thinking to mindfulness and a closer connection to God. From creating fishing scenes on the set of A River Runs Through It in Montana, to directing fly fishing shows in New Zealand and from exploring deep canyons in California to guiding in Colorado, John shares his experiences and asks the question: what are we really fishing for? Through John's journeys across the globe, we discover that the same pursuit in fishing—of what is elusive but attainable—can be applied to our own spiritual journey. In the end, Dietsch uncovers his own truth under the rocks of a childhood river, recognizing the loss of both his brothers as the path of acceptance and faith that is graced by waters.

This book gives reader a brief idea about the processes involved in fabric formation methods namely weaving and knitting including various mechanisms involved starting from the primitive handlooms to the latest shuttle less loom and from the hand knitting to ultra-modern electronic knitting machines.

Various design aspects involved in producing the different types of woven and knitted fabrics are dealt with comprehensively. Techno-economics of the latest weaving and knitting machines have been described including applications of woven and knitted fabrics for medical field, automotive engineering, aeronautical engineering, protective clothing, and so forth. Features: Covers principles involved in the numerous operations of weaving and knitting process. Gives basic understanding of fabric production, quality control and production. Provides summary of the fabric manufacturing process of weaving, knitting and non-wovens. Discusses principles of mechanisms as well as the present-day machinery details with illustrations. Explores latest development on knitting production by whole garment (Shima Seiki) and Knit and Wear (Stoll), CAD/CAM production and simulation of woven fabrics. This book aims at Senior Undergraduate students in Textile Processing and Fabric Manufacturing.

This study explores Customer Relationship Management (CRM) in government. Based on an interdisciplinary literature review and multiple-case study design, a model of Citizen Relationship Management (CiRM) is developed and discussed. The case studies explore the perceptions of CRM/CiRM by administrators, elected officials and consultants as well as its implementation and impact on the municipal level and in a multijurisdictional environment in the United States. Although the explorative part of the study focuses broadly on a theoretical conceptualization of CiRM, the immediate empirical referent of research are the 311 initiatives in the City of Baltimore, the City of Chicago, the City of New York and Miami-Dade County. Thus, the results help administrators and researchers to convey the idea and challenges of 311 well. The study shows that CRM is to a certain extent only partly able to make novel contributions to currently active reform movements in government. In addition, the study's findings support the idea that CiRM provides the means to a different kind of public participation.

Rising young comedian Moshe Kasher is lucky to be alive. He started using drugs when he was just 12. At that point, he had already been in psychoanalysis for 8 years. By the time he was 15, he had been in and out of several mental institutions, drifting from therapy to rehab to arrest to...you get the picture. But KASHER IN THE RYE is not an "eye opener" to the horrors of addiction. It's a hilarious memoir about the absurdity of it all. When he was a young boy, Kasher's mother took him on a vacation to the West Coast. Well it was more like an abduction. Only not officially. She stole them away from their father and they moved to Oakland , California. That's where the real fun begins, in the war zone of Oakland Public Schools. He was more than just out of control-his mother walked him around on a leash, which he chewed through and ran away. Those early years read like part Augusten Burroughs, part David Sedaris, with a touch of Jim Carrol...but a lot more Jewish. In fact, Kasher later spends time in a Brooklyn Hasidic community. Then came addiction... Brutally honest and laugh-out-loud funny, Kasher's first literary endeavor finds humor in even the most horrifying situations.

Gain an in-depth knowledge in immersive web development to create augmented reality (AR) and virtual reality (VR) applications inside web browsers using WebXR API, WebGL, Three.js, and A-Frame. This project-based book will provide the practice and portfolio content to make the most of what the futures of spatial computing and immersive technology have to offer. Beginning with technical analysis of how web browsers function, the book covers programming languages such as WebGL, JavaScript, and HTML, with an eye on a complete understanding of the WebXR lifecycle. You'll then explore how contemporary web browsers work at the code level and see how to set up a local development server and use it with the Visual Studio Code IDE to create 3D animation in the WebGL programming language. With a familiarity of the web-rendering pipeline in place, you'll venture on to WebGL abstractions such as the Three.js JavaScript library and Mozilla's A-Frame XR Framework, which use WebXR to create high-end visual effects. In the final projects of the book, you'll create an augmented reality web session for an Android

phone device, and create a VR scene in A-Frame (built on Three.js) to demo essential components of the WebXR API pertaining to user positioning and interaction. Game engines have become common-place for the creation of mixed reality content. However, developers not interested in learning entirely new workflows may be better suited to work within a medium almost universally open to all—the web; AR and VR Using the WebXR API will show you the way. What You'll Learn Master the creation of virtual reality and augmented reality features for web page Prepare to work as an immersive web developer with a portfolio of projects in sought-after technologies Review the fundamentals of writing shaders in WebGL Experience the unity between client, server, and cloud architecture as it applies to location-based AR Who This Book Is For Aspiring immersive web developers and developers already familiar with the fundamentals of web development who want to further explore topics such as spatial computing, computer vision, spatial anchors, and cloud-computing for multi-user social experiences.

The motivation for this book stems from an early exposure to the book Applied Mechanics by John Perry. Professor Perry strove to encourage his readers to understand the applications and use of mathematics in engineering without insisting that they become immersed in pure mathematics. The following text uses this approach to the application of telecommunications switching. Readers wishing to study the derivation and proof of formulas will be able to do so using relevant references. The existence of low-cost programmable calculators frees practicing engineers from much laborious calculation, allowing more time for creative design and application of the art. The reader should not need to be able to derive formulas in order to apply them just as, to quote Professor Perry, "He should not have to be able to design a watch in order to tell time ... The material for this book has been drawn from my own experience in the field. Inevitably, however, I have used CCITT and Bell System publications for references and in some cases quotation, and I gratefully acknowledge permission for their use. I am also grateful to Stromberg Carlson Corporation for their earlier encouragement and support without which this book would not have been possible. Thanks are also due to Fred Hadfield for his advice and assistance in the preparation of the many figures and to my wife Ada for her support and patience as I pursued the demanding but interesting task of producing the text.
