The Department of Economic and Social Affairs of the United Nations Secretariat is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which States Members of the United Nations draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging

global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities. The designations used and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries. The term "country" as used in this publication also refers, as appropriate, to territories or areas. An examination of media and technology use by school-aged youth with disabilities, with an emphasis on media use at home. Most research on media use by young people with disabilities focuses on the therapeutic and rehabilitative uses of technology; less attention has been paid to their day-to-day encounters with media and technology—the mundane, sometimes pleasurable and sometimes frustrating experiences of “hanging out, messing around, and geeking out.” In this report, Meryl Alper attempts to repair this omission, examining how school-aged children with disabilities use media for social and recreational purposes, with a

focus on media use at home. In doing so, she reframes common assumptions about the relationship between young people with disabilities and technology, and she points to areas for further study into the role of new media in the lives of these young people, their parents, and their caregivers. Alper considers the notion of “screen time” and its inapplicability in certain cases—when, for example, an iPad is a child's primary mode of communication. She looks at how young people with various disabilities use media to socialize with caregivers, siblings, and friends, looking more closely at the stereotype of the socially isolated young person with disabilities. And she examines issues encountered by parents in selecting, purchasing, and managing media for youth with such specific disabilities as ADHD and autism. She considers not only children's individual preferences and needs

bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references.

Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out

While fabrication technologies have been in use in industry for several decades, expiring patents have recently allowed the technology to spill over to technology-enthusiastic "makers." Personal Fabrication looks at the massive, disruptive changes that are likely to be seen in interactive computing, as well as to computing as a whole. It discusses six main challenges that need to be addressed for this change to take place, and explains researchers in HCI will play a key role in tackling these challenges. The book also presents findings on hardware and software innovations and emphasizes their effectiveness in clinical practices that are targeted to specific cognitive, social, academic and motor skill areas. In addition, it describes promising new deficit-reducing and skill-enhancing technologies on the horizon. Featured topics include: Developing and supporting the writing skills of individuals with ASD through assistive technologies. generated data. The term "auralization" is to be understood as being analogue to the well-known technique of "visualization". In visual illustration of scenes, data or any other meaningful information, in movie animation and in computer graphics, we describe the process of "making visible" as visualization. In acoustics, auralization is taking place when acoustic effects, primary sound signals or means of sound reinforcement or sound transmission, are processed to be presented by using electro-acoustic equipment. This book is organized as a comprehensive collection of basics, methodology and strategies of acoustic simulation and auralization. The complete reference guide to the hot technology of cloud computing. Its potential for lowering IT costs makes cloud computing a major force for both IT vendors and users; it is expected to gain momentum rapidly with the launch of Office Web Apps later this year. Because cloud computing involves various technologies, protocols, platforms, and infrastructure elements, this comprehensive reference is just what you need if you'll be using or implementing cloud computing.
