Job prospects are good for those looking to enter the Canadian accounting industry, and *Accounting For Canadians, Second Edition* is the essential resource for anyone interested in doing so. Packed with the information accountants and auditors who work in public and private industries and in government need to know in order to stay on the right side of Canadian accounting law, the book is also a must-have for salary accountants working for accounting, tax preparation, bookkeeping, and payroll services firms. Essential reading since the new GAAP became mandatory for publicly accountable enterprises and government business enterprises at the beginning of 2011. Covers the new International Financial Reporting Standards. Addresses new standards for private enterprises that business leaders need to know. Still the only trade book that covers Canadian accounting practices. The ideal book for both accounting professionals as well as students who are currently working towards a degree in accounting or auditing services, *Accounting For Canadians For Dummies* provides the applicable and helpful advice that you need to succeed.

This casebook focuses on the development and use of critical thinking skills by applying the technical knowledge that students have already learned in other accounting and auditing courses, and applying this knowledge to a case-type question. The case scenarios in this book deal with auditing and review engagements primarily, where the student is typically asked to take on the role of the fiduciary. The book starts with the introduction to a basic assurance case framework and then is arranged by chapter in order of complexity. It provides realistic scenarios that a public accountant may be faced with, along with realistic methods of communication such as writing a report, a letter, or even an email. The scenarios include a variety of organizations, ranging from the small owner-operator to the large public company to the public sector. In all scenarios the companies either follow International Financial Reporting Standards (IFRS) or the Accounting Standards for Private Enterprises (ASPE). All suggested solutions follow the Canadian Auditing Standards (CAS) and the Canadian Standard on Assurance Engagements (CSAE).

The 21st century has been host to a number of information systems technologies in the areas of science, automotive, aviation and supply chain management, among others. But perhaps one of its most disruptive is blockchain technology whose origin dates to only 2008, when an individual (or perhaps several individuals) using the pseudonym Satoshi Nakamoto published a white paper entitled Bitcoin: A peer-to-peer electronic cash system in an attempt to address the threat of “double-spending” in digital currency. Today, many top-notch global organizations are already using or planning to use blockchain technology as a secure, robust and cutting-edge technology to better serve customers. The list includes such well-known corporate entities as the Royal Bank of Canada, Bank of America, IBM and Walmart. The tamper-proof attributes of blockchain, leading to immutable sets of transactions, represent a higher quality of evidence for internal and external auditors. Blockchain technology will impact the performance of the audit process due to its attributes, as the technology can seamlessly complement traditional auditing techniques. Furthermore, various fraud schemes related to reporting, such as the recording of fictitious revenues, could be avoided or at least greatly mitigated. Frauds related to missing, duplicated or altered invoices can also be greatly curtailed. As a result, the advent of blockchain will enable auditors to reduce substantive testing as inherent risks will be reduced thereby greatly improving an audit’s detection risk. As such, the continuing use and popularity of blockchain will mean that security and information systems security professionals will need to deepen their knowledge of this disruptive technology. If you are looking for a study and reference source on blockchain technology, look no further than *The Auditor’s Guide to Blockchain Technology: Architecture, Use, Security and Assurance*. This title is a must read for all security and assurance professionals and students looking to become more proficient in this new and disruptive technology.

This book, first published in 1993, focuses on the evolution of accounting institutions, practices and standard-setting in Canada. Canada's federal system complicates the jurisdictional authority for accounting matters. The Canadian constitution empowers the ten provinces to regulate the training and certification of accountants, and each can incorporate organizations. A great deal of effort has been made by accounting bodies on jurisdictional coordination and disputes, and this book analyses how these systems have come to function in their present form.

The fifth report in this series focuses on conflicts of interest that arise when a firm combines multiple lines of business, creating multiple interests. Conflicts between research and underwriting in investment banking and between auditing and consulting in accounting firms are investigated, as are the problems that arise from rating agencies providing consulting services and from universal banks combining commercial and investment banking. In the recent stock market collapse, confidence in the financial

industry was shaken by numerous scandals. Beginning with Enron in 2001, scandals brought about the demise of prominent financial figures, damaged the reputation of premiere firms and destroyed the global accounting giant Arthur Andersen. Central to this crisis was the exploitation of conflicts of interest. Research analysts at investment banks were found to be distorting information at the behest of underwriting departments eager to promote new issues. Auditors appeared to sanction misleading accounting in order to gain business for the consulting side of their firms. Policy response in the United States was quick. Large fines were levied and regulators compelled the separation of financial security function, constraining financial conglomerates. But are these new regulations and safeguards adequate protection? What costs do they impose on the industry? This fifth title in the ICMP/CEPR series of Geneva Reports on the World Economy examines the problem of conflicts of interest in the financial system. Conflicts of interest lead to a decrease in information that makes it harder for the system to provide savers with the accurate, essential information that induces them to provide credit to borrowers. This study focuses on conflicts of interest that arise when a firm combines multiple lines of business, creating multiple interests. Conflicts between research and underwriting in investment banking and between auditing and consulting in accounting firms are investigated, as are the problems that arise from rating agencies providing consulting services and from universal banks combining commercial and investment banking. Determining the appropriate remedy for a conflict is a challenge because the elimination of conflicts may also eliminate benefits from economies of scope. This study examines five generic remedies: market discipline, regulation for increased transparency, supervisory oversight, separation of financial activities by function, and socialization of the collection and distribution of information. The authors apply this framework to assess critically the Sarbanes-Oxley Act and the Global Settlement between American regulators and investment banks.
