As wireless networks take ever-bigger bites out of the USD 350 billion dollar telephone market, they create their own performance problems. International customers require global networks; more customers mean bigger networks; new services create more complicated networks. Then there's changing out the network; each time a provider introduces a new technology or capability, it has to do so without interrupting service delivery to existing customers. Here is realistic advice on metrics, troubleshooting methods, design guidelines, revenue assurance and more, from a team that has performed the same services for AT&T Wireless, Nextel and Verizon.

Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival.

Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not

assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a particular health condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.

Credit Analysis and Lending Management is a new Australasian text that focuses on the core lending functions of financial institutions, covering asset management, credit risk assessment and analysis, lending policy formulation and management, and the rise of new product development and marketing in the financial services sector. The value of any financial institution is measured by its ability to effectively manage and reduce its credit risk. This text details the structure of the credit organisation, including loan markets. Relevant financial statements are presented to develop students' interpretative and analytical understanding of financial statements. Features: * Developments in loan marketing and new loan products are profiled and assessed (see chapter 17.) * Problem loan management is discussed as a growing professional issue (see chapter 16). * Detailed case studies at the end of the text present a diverse set of professional scenarios that can be used for assignment, assessment and group work activities. * 'Industry insight' boxes profile current professional issues and identify industry developments. * 'A day in the life of...' boxes highlight the diversity of professional roles in the banking industry.

Where is God in the universe if anywhere? Why did God make germs? Why should we be so special?

Could the universe have been different? This is a book that brings home, in no uncertain fashion, the discrepancy between the universe envisaged by the ancient sages and prophets and that of modern scientific cosmology, where the possibility of divine intervention looks less and less likely. Butchins demonstrates with clarity how the scientific method may be used, despite certain drawbacks, in an attempt to verify objective truth. It describes how the effect of the Copernican Revolution in the seventeenth century has steadily undermined the basic structure of the three great monotheistic religions of our day, Judaism, Christianity, and Islam, especially with respect to their eschatological concepts. The Eastern religions, being less anthropomorphic, are less affected. The theistic argument from design is shown to be powerful enough to have caused disagreement among present-day scientists, in spite of the strictures of Professor Dawkins. In general, the book attempts to make some sense of the structure of the universe in terms of our own consciousness; it behoves the reader to consider tha

This is the second volume of a trilogy that began with Power vs. Force and will be completed in the year 2002 by the publication of the third volume entitled I: Reality and Subjectivity. The Eye of the I (which calibrates at 950) is more advanced than Power vs. Force (which calibrates at 850) and brilliantly reveals the very core of the spiritual process critical to the state of Enlightenment. The intrinsic power of the information provided in this startling classic is sufficient of itself to elevate the consciousness of the reader. This likelihood has been anticipated and provided for by preparatory recontextualizations. Included are verbatim dialogues with advanced students, instructions, and explanations that illuminate the spiritual teachings. The Eye of the I is a brilliant work that dissolves the barriers between the known and the unknown, between science and spirituality, and between the Newtonian linear paradigm of the ego and the nonlinear reality of Enlightenment. With the resolution of the self, the Self shines forth and reveals one's true identity.

The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The Architecture

Sourcebook is different. It's not a how-to book, it's a 'what and why' book. And because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to interface to it and work with it. It will also show why design decisions were made, and will bring those decisions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the "inside story" around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design has evolved through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference section itemising the OS and its toolkit at component level and providing a reference entry for each component.

Raised with limited peer interaction, Ernestine St Bennett has difficulty interpreting social cues. At twenty-five she's become a loner; a shy nerd immersed in her scientific studies, whose best friend is her pet fish, Waldo. Then Ernestine meets Simon Prime, who's obviously a nerd, too! Sympathizing with his social dysfunction, Ernie decides to help poor Simon increase his self-esteem and thus enhance his social standing. Using principles learned in her fish studies, she'll simply turn Simon from meek to macho. What Ernestine doesn't know (but Waldo suspects) is that Simon Prime is really ex-cop, private investigator Sam Pierce in disguise. A man who definitely doesn't need his masculinity enhanced!

Strategy and Management of Industrial Brands is the first book devoted to business-to-business products and services. Looking at numerous companies, this book defines two brand objectives that are specific to the industrial and service sectors and which must be added to the traditional functions of branding: the minimization of risk as perceived by buyers, and the facilitation of the customer company's performance by the supplier brand. Different ways of classifying brands are suggested, providing a better understanding of brand strategies adopted by business-to-business companies, as well as new concepts such as brand `printability', `visibility', and `purchaseability'. Five major brand categories are dealt with in separate chapters: -entering goods brands; -intermediary equipment goods brands; -equipment goods brands; -business-to-business service brands; and -industrial distributor brands. From a practical point of view, the aim of the book is to address the main concerns of managers: How to create and protect brands? What type of visual identity is appropriate? How to manage international brands? An analysis of 1,500 industrial brands as well as 40 case studies are included in this book. These brands are used in both the industrial (automotive, building, aeronautics, IT, etc.) and consumer sectors (clothing, electronics, food packaging, telecommunications, etc.). This book has been written for professors and students of universities and business schools, as well as managers and people working in industry or the service sector.
