The Hard Copy is a work that walks the line between the exotic artists' book and the democratic, mass-produced multiple. Appropriating ideas and visual references from Stewart Brand's Whole Earth Catalog, Hard Copy represents the power that the tool bestows on the contemporary artist by listing, reviewing and appropriating information on a selection of 'artists' tools.

Gary Friedman's guides are world-renown for their thoroughness and easy-to-understandableness (that's a word!). De-mystify the menus and use your camera more confidently with this 656-page guide!

"Who are your people?" It's a question often asked by Southerners when they meet a stranger. Most of us know very little of our ancestors. John Bishop XIII was born into a line of wealthy, savvy, thrifty Scottish descendants who made him a very wealthy man, but his parents had never wanted children. He was conceived by accident, and his father tried to have the fetus aborted. John's mother did love him, but he was relegated to a place behind her illustrious musical career. His father simply ignored him. Their self-centered lack of empathy would lead to their murders and to several attempts on John's life. John found solace in his own music as he struggled to regenerate himself.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving

them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.
